Insects and Insecticides.....	1 65.....12c
Tile Drainage	40..... 3c
Bommer's Method of Making Manure.....	40..... 2c

HORSE RADISH CULTIVATION—Make up the ground as you would for strawberry plants, except that the rows are 3 feet apart; that is, the furrows are drawn 3 feet apart; put in a liberal dose of commercial fertilizer (a broadcast of good stable manure previous to this is very beneficial), then turn a double with a marker, scraping the top of the row off level, then put the sets in as nearly straight as possible, the sharpened end down, setting them about 12 to 14 inches apart in the row. This way about 10,000 sets are used to plant an acre. After it comes up the horseradish is cultivated as are most other crops; it is very easily grown, as it soon covers the ground so that the weeds will not grow in it. Horseradish Sets, 20c per dozen; \$2.00 per 100.

CHIVES OR GERMAN SCHNITTLAUCH—One of the finest and most delicate of the entire Onion family. Much more delicate in flavor than Shallots or Pearl Leek. The tops, the only part used, are used for seasoning Salads, Cream Cheese, etc. This plant is of an easy culture, but requires partly shade during the summer and high soil. Price, 15c per bunch.

RHUBARB ROOTS—20c each; \$2.00 per dozen.

FRUITS.

VEGETABLE PLANTS

During the proper season we will have all varieties of vegetable plants on hand suitable for our climate, and will be prepared to fill orders on the shortest notice providing the weather permits.

	Per Doz.	Per 100	Per 1000
Artichoke plants, Genuine Globe	50	\$2 00	\$15 00
Cabbage plants of all seasonable varieties	10	60	4 50
Cauliflower of all seasonable varieties	20	1 00	7 50
Leeks, leading varieties	10	40	3 50
Celery plants, leading varieties	15	75	6 50
Egg plants, New Orleans Market	20	1 25	8 00
Pepper plants, all varieties	20	1 00	7 50
Tomato plants, leading varieties	15	75	6 50
Beet plants, leading varieties	10	40	3 50
Lettuce plants, leading varieties	10	40	3 00
Kohlrabi, White Vienna	10	40	3 50
Creole and Bermuda Onion plants	10	25	2 50
Brussels Sprouts	20	1 00	7 50
Herb plants	50		
Mint plants	75		
Michel's Early Strawberry plants	10	50	4 00
Lady Thompson's Strawberry plants	15	60	5 00
Hoffman's Early Strawberry plants	15	60	5 00
Klondyke Strawberry plants	15	60	5 00
Ocean City Strawberry plants	15	75	6 00
Senator Dunlap Strawberry plants	15	75	6 00
Excelsior Strawberry plants	15	75	6 00

All of the above plants are transplanted and not common, cheap seed bed plants. For any of the above plants by mail, add 20 per cent to cover postage.

SPECIAL NOTICE.

Seeds of the best quality will often fail through improper treatment. Thus, a small seed may be sown so deeply that the young plant cannot reach the surface. More failures result from disregard of the conditions necessary to germination than from inferiority of the seeds used. These conditions are: a proper temperature, sufficient moisture, and free access of air. Besides these, the soil must be in proper condition, and present no physical obstacle to the growth of the young plant. If heavy rains have compacted the surface of the soil, and the sun has baked it to a hard crust, it will be impossible, even if all other conditions are favorable, for the seedling plants to force their way through it, and many perish from this cause alone. Seeds differ greatly as to the temperature required for germination. Beets, Cress, Peas, etc., germinate rapidly at a temperature of 45°; but if Melons and other seeds of that family, bush or pole Beans, and other plants of subtropical origin, are sown under the same conditions, they will be apt to decay, as for their prompt germination they require a heat of at least 60°. For this reason many seeds fail yearly from too early sowing. The second condition, proper moisture, is likely to be violated by an excess rather than by too small a portion. The proper amount is that which a well-drained soil will naturally hold. Free access of air is all important, and this is interfered with by an excess of water in the soil. In germination complex chemical changes take place in the seeds, in which the air performs an important part. A portion of the seed is consumed, carbonic acid gas being given off in changing the starch and other constituents of the seed into nutriment to forward the growth of the germ or embryo plant, which depends upon the contents of the seed until it has formed roots below the ground and leaves above, and is able to sustain itself. Besides these conditions affecting the germination of the seed, the young plants, after they have made their way to the surface, are liable to various accidents; a sudden current of very cold air, or a continuous drying wind, may check their growth, or destroy them altogether. In addition, there are numerous insects, both below and above ground, that may attack the plants, some of them being so small that they often destroy a crop before they are discovered. We may also mention the well-known tendency of many vegetables to revert to their original types, notwithstanding the care of the seed-grower; the yellow-podded wax Beans becoming green, the yellow and white Celery becoming more or less green, dwarf Peas becoming running sorts, etc.

The vitality (that is, percentage of growth) can be tested easily before planting, but no one can tell from an examination of the seeds themselves whether they are of a high grade pedigree strain or the veriest rubbish.

It is necessary, therefore, that every planter must trust some seedsman. The fact that more planters order direct from us,—year after year,—shows that STECKLER'S SEEDS *have been proven trustworthy*. Mistakes, however, may occur sometimes, and no honest seedsman can assume responsibility for more than the price actually paid by the purchaser. The fact that we have always plainly stated, where failure is due to any fault of the seed, we would promptly refund the full price paid, should convince even new customers that we have absolute confidence both in the quality of STECKLER'S SEEDS and in the thorough system of safeguards with which we surround their selecting, cleaning and packing.

--- --- Our --- --- Unapproachable Record Catalog.

Another year, the SIXTEENTH, has been added to our record for selling good true seed to the people of the South. Last year we passed our CRYSTAL ANNIVERSARY as successfully as every year that had gone before, and now we are proud to state that our record for satisfying the demand for honest seeds has stood the test for another twelve months and has added to our reputation in a manner that is most pleasing to ourselves as well as those who pinned their faith to us.

That high standard, to which we aimed for the last sixteen years, has been maintained and we still uphold our claim that

Steckler's Seeds are Best Best Seeds Always Grow

This house was founded by Mr. Richard Frotscher in the year 1865, and for forty-five years it has stood the test, gaining popularity, which we have earnestly striven to deserve, more rapidly and forcibly since we have assumed the conduct of the business. For this reason the name "STECKLER" on our packages of seeds means as much to the buyer as does the mint imprint on a standard coin.

STECKLER'S SEEDS ARE STANDARD.

Southern climates need seed especially developed for them. This is the kind of seed developed by us and for that reason our success has been certain. The Southern planter and farmer and truck grower has found this out and for that reason looks for the package with the name "Steckler" upon it.

We therefore present this catalog with the assurance that all the seed offered therein is that which is best fitted for planting in the South.

We desire to extend our thanks to those who have so confidently patronized us in the past and to reiterate our statement that we shall continue to strive to win the good will of the planters of all kinds in the South.

J. STECKLER SEED CO., LTD.

M. T. FROTSCHER, President.
JOSEPH STECKLER, Vice President and Gen'l Mgr.
RICHARD P. STECKLER, Secretary-Treasurer.

SEEDS BY MAIL.

Seeds can be sent by mail to any part of the United States, in packages not exceeding four pounds, at 8 cents per pound, or 1 cent for two ounces or fraction thereof. On seeds ordered in papers or by the ounce, we prepay the postage, except on peas, beans and corn. This refers to large size papers, which are sold at one dollar per fifteen papers. When ordering by the pound, **nine cents per pound postage has to be added to the price of seeds; to peas, beans and corn, 15 cents per quart.**

All packages are put up in the most careful manner, and every precaution is taken to insure their reaching their destination in safety. Purchasers living at any place where our seeds are not sold are requested to write to us to obtain their supplies. This will be more profitable than to buy from country stores where seeds left on commission are often kept until all power of germination is destroyed. As seed merchants who give their goods out on commission rarely collect what is not sold oftener than once every twelve months, and as Lettuce, Spinach, Parsnips, Carrots and many other seeds will either not sprout at all, or grow imperfectly, if kept over a summer in the South, to buy and plant such is but money, time and labor wasted.

Here in our climate, where we plant garden vegetables as freely in autumn as in spring, and where often the seeds have to be put in the ground when the weather is very warm, it is an indispensable necessity to have perfectly fresh seeds.

Our arrangements with our growers are made so that we receive the new crop, expressly cleaned for us, as soon as it is matured. The varieties which are not raised in this country we order from Europe, and have them shipped so as to reach us about the beginning of August, just the time they are needed for fall planting, and from that time up to January shipments are made to us at the beginning of every month. By following this plan we have always a full supply of fresh seeds of undoubted germinating qualities, while dealers who sell on commission have only those from the winter previous.

On the receipt of \$1.00 we will mail fifteen large size papers of seeds, put up the same as seeds sold by the pound. These papers can be selected from this catalogue, and include four papers of either peas or beans in the fifteen papers. Or, for the same amount, we will mail 24 smaller papers, including four papers of either peas or beans. This is done to enable customers to get reliable seeds in good size papers in places where our seeds are not sold. The papers put up by Northern seedsmen are so small that of some varieties they hardly contain enough to do any good. The low prices charged to merchants are made at the expense of the consumers. Our papers are large and worth the full value of the money paid for them.

It cannot be too well impressed upon the minds of the cultivators of all vegetables that most seeds kept through a summer in this climate *will not grow*, and all who use such seeds will be the losers.

On all goods ordered C. O. D. one-half of the amount of the bill must accompany the order; otherwise the same will not be filled. All bills are payable in New Orleans or New York Exchange. No individual checks on country banks on amounts under ten dollars.

This Company gives no warranty, expressed or implied, as to description, quality, productiveness or any other matter of any seeds, bulbs or plants we send out, and we will not be in any way responsible for the crop. If the purchaser does not accept the goods on these terms, they are at once to be returned.

DIRECTIONS FOR PLANTING.

The directions given here are for Southern Louisiana. If applied to localities north of here the time of planting will not be quite as early in the Spring and earlier in the Fall. For instance, the directions given for January will answer for February in the northern part of this State and Mississippi and the Southern part of Alabama. In autumn directions for September can be followed in August. For the middle and southern parts of Florida, sowing can be done much earlier in the Spring, and in the Fall much later than in Louisiana. In the northern part of Louisiana, Mississippi and Texas, as well as in the southern part of Alabama, very little can be planted in November and December.

JANUARY.

Vegetable Garden. During this month sow Spinach, Mustard, Carrots, Beets, Turnips, Leeks, early Radish, and for the last crop the Black Spanish, White California Mammoth and Chinese Rose.

Early varieties of Turnip and Ruta Baga for table use can be sown.

Sow Lettuce, Endive, Cabbage, Broccoli, Kohlrabi and early Cauliflower. As the weather is very unstable, it is best to sow in a frame and protect young plants during severe cold weather.

Cress, Chervil, Parsley and Celery, the latter for cutting, should be sown, also Roquette and Sorrel.

If the hot-bed has not been prepared during the previous month, it should be done at once, to sow Eggplants, Pepper and Tomatoes the latter can be sown a little later than the former.

Plant Peas for general crop, such as Black-Eyed and large White Marrowfat, Champion of England, Eugene, Stratagem, Telephone and other varieties. Towards the end of this month the Extra Early varieties, like First and Best, Little Gem, Early Washington, Blue Beauty, American Wonder, Prince of Wales, Daisy or Dwarf Telephone, Gradus, Nott's Excelsior, Morning Star, Tall and Dwarf Sugar and Alaska may be planted.

Divide and transplant Shallots, also set out Cabbage plants sown in November.

Onions, if not already transplanted should be hurried, so that they may have time to bulb. Those who desire to raise Onion sets should sow the seed towards the end of this month, as Onion sets which are set out earlier in the fall can be sold earlier than those raised from seed.

It is better to sow Onion seeds for sets in February, as they generally get too large if sown this month. Northern seeds will not make sets in our climate.

Sow Sweet and Medicinal Herbs such as Thyme, Sage, Marjorum, Bane, Rosemary, Pot Marigold, Borage, Savory, Balm Tansy and Wormwood.

Cucumber can be planted for forcing. It is best to plant the seeds in dirt bands first, and when the third leaf is developed, transplant into the hot-bed.

Although Cucumbers for shipping are mostly planted in November and December, if the hot-bed is properly made, those planted in this month will bear better than if planted in November.

Set out Strawberry plants

Field. Plant Potatoes. The Early Rose and Bliss Triumph should not be planted before the latter part of this month. Peerless and other second early varieties may be planted after the first.

Asparagus roots should be set out, also Red Rust-Proof Oats, Seed Rye, Barley, Wheat, Vetches, Buckwheat, all varieties of Clover, Dwarf Essex Rape, Kentucky Blue, Red Top, Rescue, Johnson, Tall Meadow Oat, Meadow Fescue, Guinea and Orchard Grasses, Timothy, all varieties of Millet and Giant Beggar Weed may be sown.

Orchard. Fruit trees of all kinds, such as Pecans, Pear Plum, Peach, Apple, and Orange as well as other varieties of Fruit Trees enumerated in this catalogue, should be planted.

January and February are the best months to set out fruit trees.

Flower Garden. Continue to sow flower seeds during this month for spring and early summer blooming. The best varieties are Verbena, Phlox, Petunia, Summer Chrysanthemum, Lychnis, Flax, Scarlet Sage, Holyhock Sweet Alyssum, Snapdragon, Aster, Columbine, Daisy, Wall Flower, Bell Flower, Sweet Sultan, Coreopsis, Sweet William, Japan and Carnation Pinks, Larkspur, California Poppy, Heliotropium, White and Red Everlasting Flowers, Candytuft, Lobelia, Monkey Flower, Love in a Mist, Evening Primrose, Sweet Mignonette, Dwarf Mourning Bride, Flowering Sweet Peas and Pansies, also Japan and Tiger Lilies and Narcissus bulbs for late flowering. In a cold frame sow at the end of the month Balsams (Lady Slippers), Zinnia, Amaranthus, Cockscomb, Rosa Montana, Evening Glory and Nasturtium, and in the Greenhouse in pots Begonia Rex, Begonia Tuberosa and Cyclamen, Plant Gladiolus, Hyacinths, Tulips, all varieties of Narcissus, Anemones, Ranunculus, Chinese Sacred Lilies, Oxalis or Buttercup, all varieties of Calla Lilies, Scilla Peruviana, Tuberoses, all varieties of Japan Lilies, Amaryllis, Spanish Iris, Star of Bethlehem and Freesia bulbs out of doors in sheltered places for early blooming. Set out Roses and flowering ornamental shrubs. Fall annuals mentioned in this catalogue can be planted this month.

Shade Trees. Plant all varieties mentioned in this catalogue.

FEBRUARY.

Vegetable Garden. All winter vegetables can be sown this month, such as Spinach, Mustard, Carrots, Beets, Parsnips, Leeks, early Radishes, White Spring and Early Purple Top Turnip, Swiss Chard, Kohlrabi, Lettuce, Cabbage and Early Cauliflower. If the weather is favorable and the month of April dry, the latter will succeed well.

Cauliflower, Cabbage, Lettuce and Kohlrabi should be transplanted, Shallots divided and set out again also sow Sorrel, Roquette, Chervil, Parsley, Cress and Celery for seasoning.

All varieties of Peas can be planted, especially the early varieties. The later varieties are best planted in January, but if planted in the early part of February they will do well.

Sweet Herbs should be planted, the most tender varieties in a frame, and afterwards transplanted into the open ground.

Plant Asparagus seed and roots.

Hot-beds, on account of the changeable weather during this month, require a good deal of attention. Give air when the sun shines and the weather is pleasant, otherwise plants will become spindly and long legged. It too thick thin them out so that they may become sturdy.

Begin to plant Bush Beans as soon as the weather permits: also Cucumbers, Squash, and Melons, as they often succeed if protected by small boxes or dirt bands, covered with glass, as most gardeners do here.

At the end of this month Early Corn can be planted. For market use Adams' Extra Early, Crosby's

Dwarf Sugar, Frotcher's Adam's Early, Early Sugar or New England, Stowell's Evergreen, Early White Flint and other early varieties.

Field. February is the best month to plant a general crop of all varieties of Potatoes, as on an average they will succeed better if planted during this month.

All of the Grasses, Clovers and Field Seeds mentioned for January can be sown this month. Sorghum can also be planted.

Mangel Wurzel and Sugar Beets should be sown for stock food. Sweet Potatoes can be put in a bed for sprouting, so as to have early slips.

Sow all varieties of Field Corn.

Orchard. Plant fruit trees of all kinds. Pecan nuts may be planted to raise trees from.

Flower Garden. Sow flower seed for late spring and early summer, such as Zinnia and Balsams (Lady Slippers) in frame: Torenia, different varieties of Gomphrenas, etc.

Set out Roses and ornamental Shrubs. Plant Gladiolus and Tuberose bulbs, Sweet Alyssum, Candytuft, Snapdragon, Pansy, Aster, Chinese and Japan Pinks, Daisies for late blooming, Lobelia, Reseda, Bottle Pink, Sweet Sultan, Phlox, Verbena, Browallia, Cosmos, Correpopsis, Sunflower, Sensitive Plant, Cobaea Scandens, Rosa Montana, Aristolochia Elegans, Tagetes, Salvia and Vinca, Lay Dahlia bulbs in a hot-bed for propagating. Plant all bulbous roots as directed for last month.

Follow same directions as given for January for Fall annual plants.

Shade Trees. Same directions as given for January.

MARCH.

Vegetable Garden. Sow Beets, Radishes, early Cabbage, Kohlrabi, all varieties of Lettuce, Spinach, Mustard, Carrots, Swiss Chard, Leeks; Celery for cutting, Parsley, Roquette, Cress and Chervil. Towards the end of this month sow Endive.

Plant all varieties of Bush and Pole Beans; but for Lima Beans it is better to wait until the end of the month, as they root easily when the ground is not warm enough or too wet.

Squash, Cucumbers, Melons and Okra can be planted. The remark in regard to Lima Beans holds good also for Okra. Early varieties of Peas may still be planted; set out Tomatoes, Eggplants and Peppers in the open ground and sow seed for later crop. Plant Sweet Corn.

Beans are hard to keep in this climate, the White and Red Kidney can be planted for shelling purposes.

Field. Sow Sorghum, Kaffir Corn, Dhouro, Millo Maize, and Teosinte for green feed. Sow Lespedeza and all varieties of Clover and Grass seed for hay and grazing.

Plant Irish and Sweet Potatoes, all varieties of Field and Broom Corn. Plant Sorghum, also all varieties of Cow Peas, Canada Field Peas, Soja and Velvet Beans.

Orchard. Fruit trees may be planted the early part of this month, or even later if the season is somewhat retarded.

Flower Garden. Sow Balsams (Lady Slippers), Zinnia, Amaranthus, Torenia, Dahlia, Cockscorn, Cosmos, Portulacca, Browallia and Sunflower. Plant all Bulbs as directed for January. Set out Chrysanthemums for fall blooming.

For Fall annual plants see directions for January.

Shade Trees. Plant all varieties mentioned in this catalogue.

APRIL.

Vegetable Garden. Sow Bush, Pole and Lima Beans, Sweet Corn, Cucumbers, Squash, Melons and Okra, Beets, Carrots, Swiss Chard, Radishes, Lettuce, Mustard, Endive, Roquette, Cress, Parsley, Chervil and Celery for cutting.

Sow Tomatoes, Eggplants and Peppers.

Early Cabbage may be successfully sown. Kohlrabi can be sown, but it is best to sow thinly in drills a foot apart, and thin out to four inches in the rows instead of transplanting. Towards the end of this month a sowing of the late Italian Cauliflower can be made, as it takes from eight to nine months to mature, and, therefore, should be sown early. It is always best to make several sowings so that in case one should fail, the other may be used. The Italian Cauliflower is harder than the French and German varieties. A good plan is to sow the seed in boxes elevated two or three feet above the ground, as it will keep the Cabbage fly off. The plants should be looked over daily, and all green cabbage-worms and other vermin removed.

Field. Plant Sweet Potato slips for early crop dig Irish Potatoes planted early, and after well preparing the ground, plant Corn, Beans, Squash, etc., in it.

Sow Cashaw and field Pumpkins.

Orchard. Little is to be done during this month, except perhaps, if the weather is favorable, budding Orange trees on Trifoliata stools; keep young trees clean of weeds, and during a dry spell water those which were lately transplanted.

Flower Garden. Sow Balsams (Lady Slippers), Gomphrenas, Torienias and Amaranthus, Browallia, Celosia, Vinca Rosea, Plant Coleus, and other foliage plants, Dahlias and Chrysanthemums, Sunflower, Gladiolus and Tuberose bulbs.

Plant all annuals described in this catalogue.

Shade Trees. Can be planted during the early part of the month.

MAY.

Vegetable Garden. Sow as directed for April. Where Potatoes and Onions were taken up, Corn, Melons, Cucumbers, Squash and Pumpkins may be planted.

All varieties of early Cabbage can be sown this month.

During the hot weather Lettuce requires a good deal of water, as it will, if neglected, soon become

hard and tasteless. In fact, it is combined with a good deal of labor to raise good Lettuce during the summer months. Improved Royal Cabbage, Hubbard, Peripignan, Steckler's French Market, White Paris Coss or Roman are the best for summer use. Okra can still be sown.

Large White Solid Celery may be sown now, but must be well shaded, and if the weather is dry, should be regularly watered.

Late Italian Cauliflower may be sown. Lima and Pole Beans can be planted, the Southern Prolific, Kentucky Wonder and White Creaseback are the best varieties for late planting.

Field. Cow Peas and Crowders can be planted, the latter is the best to be used green.

Sweet Potato slips can still be set out, taking advantage of an occasional rain, but if it does not rain they must be watered. As the tops of Shallots get dry, which indicates their being ripe, they are fit to

be taken up and stored away in a dry, airy place, taking care not to lay them too thick, as they are liable to heat.

Grass and Field Seeds, Sorghum, Field and Cow Peas, Soja and Velvet Beans, Field and Broom Corn can also be planted.

Orchard. Besides Budding nothing can be done.

Flower Garden. Follow instructions given for last month.

JUNE.

Vegetable Garden. The sowing during this month is similar to the preceding. The growing crops will require attention as weeds grow fast during this month.

Corn may be planted for the last supply of roasting ears, also a few Water and Musk Melons. Cucumbers, Squash and Pumpkins planted during this month generally do well, but if the weather is hot and dry, they require an abundance of water.

Southern Prolific, Kentucky Wonder and White Creaseback Pole Beans are the best to plant this month, as they stand more heat than other varieties. Continue to set out Sweet Potato slips.

Sow all kinds of Radishes, Endive for salad, also Royal and Perpignan Lettuce.

Before sowing, soak the seeds for half an hour in water, take them out, put in a piece of cloth and set in a cool damp place, or if convenient in an ice box, which is best. Keep the cloth moist, and in four to six days the seeds will sprout. Then sow them. It is best to do so in the evening, and give a good watering.

If the seeds are sown without being sprouted, ants will be likely to carry them away before they can germinate, and the seedsman be blamed for selling seeds that did not grow. This sprouting has to be done from May to September, or, if the weather is warm and dry in the latter month, up to the middle of October.

Should the weather be moist and cool in the fall it can be dispensed with.

Cabbage for winter crops may be sown in this month, as the plants are generally easier raised during this than the following months.

Late Italian Giant Cauliflower may still be sown at the early part of this month; towards the end Half Early Paris, Extra Early Paris, Early Dwarf Erfurt, Henderson's Snowball and Early Italian Giant can be sown. Some cultivators transplant them, when large enough, at once from the seed bed into the open ground, others plant them first in dirt bands and transplant into the ground later. However, if transplanted at this time of the year they will have to be shaded for a few days and watered until they have taken a good hold.

Sow Tomatoes for late crop towards the end of this month.

Field. Cow Peas, Canada Field Peas, Soja and Velvet Beans, Sorghum and all varieties of Field Corn can still be sown. Plant Sweet Potato slips for a late crop.

Orchard. Nothing can be done.

Flower Garden. Follow instructions given for April.

JULY.

Vegetable Garden. Towards the end of this month plant Pole and Bush Beans. In the early part sow Tomatoes for the last crop; also some Corn for roasting ears.

Cucumbers can be planted for pickling. Endive, Lettuce, all Radishes, as well as all Cauliflowers mentioned for June planting.

In new ground some Turnips and Ruta Bagas can be sown.

Plant all varieties of Cabbage mentioned in catalogue. Some seasons we have early frosts, other seasons not before January, and Cabbage is most easily hurt by frost when heading up. When the plants are small, or half grown, or when they are headed up, they are not so much affected by cold weather. It is therefore necessary to make two or sowings at different times, so that in case some of the Cabbage is destroyed by frost, the other is coming on. As a general rule plants raised from seed sown in July and August give the best results, they are almost sure to head.

Brunswick is the earliest of the large growing varieties and should be sown in July and August, so that it may be headed up when cold weather sets in.

It is more tender than the Flat Dutch and Drum-head. The same may be said in regard to the St. Denis and Improved Early Summer.

All cabbages require a strong, good soil, but the Brunswick and Flat Dutch in particular.

The ground should be well fertilized with either stable manure, cotton seed meal or superphosphate; but we consider Cow Peas planted on the Cabbage land and plowed under the best and cheapest fertilizer.

A large quantity of seed must be sown at this time of the year, as it is sometimes very difficult to get a proper stand, and it is always better to have some plants left over than to be short.

It is a very difficult matter to protect the young Cabbage plants from the ravages of the insects, which are, especially after a mild winter, plentiful.

Strong Tobacco water or Tobacco dust has been found very beneficial; also Tobacco stems cut fine and scattered over the ground, will keep them off to some extent.

Field. Field Corn, Cow and Canada Peas and Sorghum can be planted.

In the Orchard and Flower Garden nothing can be done during this month.

AUGUST.

Vegetable Garden. During this month gardeners in the South are very busy with sowing and planting. Bush Beans, White, Black-Eyed and Dwarf Marrowfat, Alaska, Blue Beauty, Morning Star and Extra Early and Washington Peas can be planted; also all varieties of Cabbage and Cauliflower, Broccoli, Brussels

Sprouts and Kale, Parsley, Roquette, Chervil, Lettuce, Endive and Sorrel, but if the weather should be very dry, these seeds have to be frequently watered. It is best to cover Parsley seed with moss or brush until it begins to come up. All varieties of Radish may be sown.

Sow Swiss Chard, Mustard and Cress, all varieties of Turnip and Ruta Baga, and also Vienna Kohlrabi. If not too hot and dry, Beets of all kinds may be planted; but it is better to wait until the following month.

Carrots may be sown in the latter part; if the weather is favorable; but if hot and dry it is useless to do much, as seeds cannot come up well without being watered.

All varieties of Celery should be sown now.

Set out Shallots, Red and White Kidney Beans for shelling should be planted at the early part of this month.

Sow Tomatoes for late crop.

If Celery plants are set out during this month they require to be shaded.

Field. Peerless and other varieties of Potatoes saved from the spring crop, should be planted early this month for a winter crop, the smallest Potatoes are selected for that purpose and planted whole. Mexican June Corn can be planted in the early part of the month. Sow Cow and Field Peas, Velvet Beans and Sorghum.

Orchard. If the weather is favorable Orange trees may be transplanted during this month, and will generally do better than those transplanted in February.

Flower Garden. Sow Balsams (Lady Slippers), Zinnia, Cockscomb, Gomphrena, etc., to bloom for November 1. Plant Spring annuals as described in this catalogue.

SEPTEMBER.

Vegetable Garden. Mostly all seeds recommended for last month can be sown this month, but some more should be added to them.

In the early part plant Bush Beans, as they will bear before frost sets in. Also plant all early varieties of Peas. All kinds of Radishes, Carrots, Beets, Parsnips, Salsify, Roquette, Chervil, Parsley, Sorrel, Cress, Lettuce, Endive, Leeks, Turnips, Kohlrabi, Broccoli, Cauliflower, Kale, Celery, Corn Salad and Mustard can be sown during this month.

Begin sowing Creole Onion seed after the 15th of this month. As this is one of the most important crops, it should not be neglected.

Transplant Celery plants in ditches made for that purpose, and if the weather is favorable, set out Lettuce, Beet, Cabbage and Cauliflower plants.

If the weather is not too hot and dry, Spinach may be sown, but has to be well watered, otherwise it is impossible to get a stand.

Some Cabbage seed may be sown, but Cabbage sown this month will generally not do as well as seed sown during the previous month.

Set out, divide and transplant Shallots, sow Sorrel and Turnip-rooted Celery.

Field. Continue to plant Potatoes for an early winter crop. Use only small ones left over from a late spring crop, but do not cut them as they are apt to rot. Plow under the Cow Peas and prepare land to set out Cabbage and Cauliflower plants. Sow Seed Rye, Barley, Wheat, Vetches, Buckwheat, all varieties of Clovers, Dwarf Essex Rape, Kentucky Blue, Red Top, Rescue, Johnson, Tall Meadow Oat, Meadow Fescue, Guinea and Orchard Grasses, Timothy, all varieties of Millet and Giant Beggar Weed.

Orchard. Continue to bud if the weather is not too dry and the stools remain in sap.

Flower Garden. During this month flower seeds, such as Pansy, Daisy, Sweet Alyssum, Candytuft, Stocks, Flowering Sweet Peas, Phlox, Chinese, Japan, Marguerite and Carnation Pinks, Asters, etc., can be sown. Plant Hyacinth bulbs for early blooming at the end of the month. Sow on your lawn English Rye Grass for winter lawn.

OCTOBER.

Vegetable Garden. This is the month when Artichokes should be dressed, the suckers or sprouts taken off and transplanted.

Onion seed can be sown up to the 10th of this month, but it is better to get in the ground as soon as possible, so that the plants get large enough before cold weather comes on.

Black-Eyed Marrowfat Peas and English Windsor Beans can be planted.

Sow Cabbage, Spinach, Cauliflower, Broccoli, Brussels Sprouts, Kale, Mustard, Swiss Chard, Carrots, Beets, Salsify, Leeks, Corn Salad, Parsley, Roquette, Chervil, Kohlrabi, Lettuce, Radishes, Endive and Parsnips.

Shallots set out previously may be divided and set out again.

Field. Rye, Barley and Texas Red Rust Proof Oats should be planted for stock food, also Orchard Grass, Red and White Clover, Alfalfa or Lucerne and Crimson Clover. Sow Red Top, Ken-

tucky Blue, Timothy and Rescue Grass and all varieties as directed for September.

Orchard. Spray your fruit trees in order to destroy scale and other insects, and prepare land to set out more trees. If the weather is good and the trees are in sap, bud Orange trees.

Transplant Strawberry plants; they have to be transplanted every year, as they cannot be left in the same place for several years, as is done North.

Senator Dunlap, Excelsior, Michel's Early, Ocean City, Improved Hoffman, Lady Thompson and Klondyke are the favorite varieties for the Southern States.

Flower Garden. Continue to sow Flower seeds of all spring blooming varieties. Plant Hyacinth, Narcissus, Ranunculus, Anemones, Tulip and Lily bulbs, Pansies, Daisies, Sweet Alyssum, Candytuft, Petunias, Phlox, Verbenas, Columbine, Chinese, Japan and Carnation Pinks, Snapdragon, Flowering Sweet Peas, Sweet William, Stocks and Poppy. Plant English Rye Grass for your winter lawn.

NOVEMBER.

Vegetable Garden. During this month continue to sow all varieties of winter vegetables as during the previous month.

All varieties of Cabbage can be sown this month and will make fine heads in the spring. Artichokes should be dressed.

Sow Black-Eyed Marrowfat and other late varieties of Peas; they are not easily affected by frost as

long as they are small, and during this time of the year they will not grow very fast. English Windsor Beans may be still planted; they are hardy enough not to be hurt by frost.

Hot-beds should be gotten ready now for Cucumbers, manure for same should be looked after, it ought not to be over one month old.

Set out Strawberry plants.

Field. Continue to sow all varieties of Grasses, Field and Clover Seed as directed for September.

Orchard. Prepare your land to set out fruit trees, transplant those which are dormant.

Flower Garden. Sow Flower seeds of all kinds in boxes and transplant when large enough into open ground, such as Pansy, Daisy, Phlox, Petunia, Chinese and other Pinks, Alyssum, Candytuft, Wall Flower, Larkspur, Lobelia, Nierembergia and Poppy.

Set out Roses and other hardy plants.

Plant Hyacinths, Tulips, Narcissus, Jonquils, Anemones and Ranunculus in open ground or flower pots for forcing.

To force Hyacinths and other bulbous rooted plants in flower pots, use light but rich soil, plant in 5 inch pots, so that the top of the bulbs are covered half an inch.

Give one good watering and bury the pots 6 inches under the ground, until the bulbs are well rooted, which takes from 4 to 5 weeks. When well rooted take the pots out of the ground and gradually expose to the light, when they will soon put out and bloom well. Plant English Rye Grass for your winter lawn.

Shade Trees. During the latter part of this month plant all shade trees described in this catalogue.

DECEMBER.

Vegetable Garden. During this month not a great deal is planted, as the ground is generally occupied by growing crops.

Peas for general crop may be planted, some Potatoes may be planted; but on account of cold weather during January and February, it is very uncertain whether they will succeed or not.

Spinach, Rocket, Radishes, Carrots, Lettuce, Endive and some early Cabbage may be sown.

Sow early varieties of Cauliflower in a frame or a sheltered situation in the open ground to be transplanted in February.

Sow Tomatoes for forcing in a cooled-off hot-bed.

Field. Sow Alfalfa, Red, Alsike, Burr, White and Crimson Clover, all varieties of Grass seed, Rye, Barley, Wheat and Oats for stock food.

Orchard. Prepare ground for fruit trees during this month, and towards the end begin to plant.

Plant Pecan Nuts to raise trees from.

Prune, work and fertilize trees which have been planted during the previous season.

Flower Garden. Plant Hyacinths, Tulips, Narcissus, Jonquils, Ranunculus, Anemones, Japan Lilies. Sow all varieties of winter and spring blooming flower seeds in cold frames to be set out in January and February, as for instance Lobelia, Asters, Pansy, Daisy, Phlox, Petunia, Chinese and other Pinks, Alyssum, Candytuft, Wall Flower, Larkspur, Nierembergia, Poppy, Hollyhock, Snapdragon, Flos Adonis, Calceopsis, Heliotrope, Primula and Reseda. Set out Roses and other hardy plants. Plant English Rye Grass for your winter lawn.

Shade Trees. Plant all varieties.

SOWING SEEDS.

Some seeds are sown at once where they are to remain and mature. Others are sown in seed beds and transplanted afterwards. Seeds should be covered according to their sizes, a covering of earth twice the size of the seed is about the maximum. Some seeds, such as Beans, Corn and Peas, can be covered from one to two inches, and they will come up well. Here is a difference again: Wrinkled Pea and Sugar Corn have to be covered lighter and more carefully than Marrowfat Peas or the common varieties of corn. It depends upon the nature of the soil, season of the year, etc. For instance, in heavy wet soils, seeds have to be covered lighter than in sandy light ground. Seeds which are sown during summer in the open ground, such as Beets and Carrots, should be soaked over night in water and rolled in ashes before sowing; they will come up quicker. When they are sown in a seed bed, the ground should be light enough not to bake after a rain. Some varieties of seeds require shade when sown during summer, such as Cauliflower, Celery and Lettuce. Care should be taken to have the shade at least three feet from the ground, and shade only after the sun has been on the bed for two or three hours; and remove again early in the afternoon so the plants may be come sturdy. If too much shaded they will be drawn up, long-legged, and not fit to be set out in the open ground. The most successful Cabbage planters sow their seeds in the open ground, towards the end of July and during August, and give them no shade, but water and keep the ground moist from the day of

sowing until the plants are transplanted. Seeds should be sown thinly in the seed bed. If plants come up too thickly they are apt to damp off.

Lettuce seed should be sprouted during the hot months before sowing, according to directions given for June.

To sow Turnips on a large scale during the late summer and early fall months, the ground should be prepared in advance and the seed sown just before or during the rain. Small pieces of ground, of course, can be sown at any time and watered afterwards. For covering all kinds of seeds a fork is preferable to a rake; with either implement care must be taken not to cover the seeds too deep. Beans, Peas and Corn are covered with the hoe. Some fine seeds, such as Thyme and Tobacco, are covered enough when pressed with the back of the spade to the ground. The seedsman is often blamed for selling seeds which have not come up when the same are perfectly good, but, perhaps, through ignorance, the party by whom they were sown planted them too deep or too shallow in the ground, or the ground may have been just moist enough to swell the seeds and they failed to come up. At other times washing rains after sowing beat the ground and form a crust that the seeds are not able to penetrate, or if there is too much manure it will burn the seeds and destroy their vitality.

When seeds, such as Beans, Cucumbers, Melons and Squash, are planted before it is warm enough, they are very apt to rot if it rains.

GERMINATING SEEDS.

Complaints are often made to seedsmen by inexperienced Truck farmers and Planters that certain varieties of garden and field seeds are slow in coming up or fail entirely. The fault, as a general rule, is mostly the gardeners, but the seedsman invariably

gets the blame, mostly unjust and groundless, but he is blamed and otherwise abused nevertheless. For the guidance of those who are inexperienced we deem it necessary to lay down the following rules:

1. Never sow out of time. Many of our Truck farmers are in the habit of sowing too soon and in consequence are often compelled to sow double the quantity to get a good stand. As to the proper time for sowing read our directions for planting.

2. Do not cover seed too deep, it will be impossible for the finer varieties to push through, especially if the soil is heavy and claylike. The rule is never to cover seeds more than twice their thickness, except the finer ones which require no covering at all. They should be slightly pressed in the ground to prevent their being washed away.

Beans, Peas and Corn should be covered $\frac{1}{4}$ to $\frac{1}{2}$ inch according to the nature of the soil.

3. Keep your seed beds moist, but not too wet. Water in evening and during extremely dry weather twice a day or oftener if required. Tender seeds,

such as Celery, Onions, Leek and Cauliflower, may be shaded during the hottest part of the day, they have to be uncovered in the evening while the sun is still on the bed, well watered and left uncovered during the night. During cloudy weather no covering is needed, nor should they be covered when they are up, otherwise the young plants become tender and damp off.

4. Previous to planting have your seed beds well prepared, have the soil well pulverized and mellow, but not too fine, otherwise a crust will form, owing to constant watering, on the surface, which prevents the tender germ from pushing through.

5. Never use fresh manure in the seed bed, if any is needed use well rotted Horse, or in light sandy soil Cow manure and incorporate it well with the soil before sowing the seed.

Approximate Time for Certain Varieties of Seed to Germinate.

The time for seed to germinate depends entirely upon the weather and the treatment of the seed bed we will try though to give as much as we know by experience, the approximate time for germinating:

Artichokes from 14 to 21 days.
Asparagus from 20 to 30 days.
Beans from 5 to 10 days.
Borecole, Broccoli, Brussels Sprouts, Cabbage and Cauliflower from 5 to 12 days.
Carrots from 14 to 21 days, and often longer during dry weather.
Celery from 20 to 30 days.
Chervil from 18 to 25 days.
Collards from 5 to 12 days.
Corn Salad 14 days.
Corn from 8 to 14 days.
Cress, curled, from 3 to 5 days.
Cress, broad-leaved, from 5 to 12 days.
Cress, water, from 12 to 14 days.
Cucumbers from 5 to 10 days.
Eggplants from 8 to 20 days.
Endive from 5 to 7 days.
Kohlrabi from 5 to 10 days.
Lettuce from 6 to 10 days.
Melons, Cantelopes, from 5 to 10 days.
Melons, Water, from 8 to 15 days.
Mustard from 3 to 7 days.
Okra from 8 to 15 days.
Onions from 7 to 14 days.
Parsley from 20 to 30 days.
Parsnip from 8 to 14 days.
Peas from 5 to 10 days.
Pepper from 8 to 20 days.
Pumpkin from 5 to 10 days.
Radish from 3 to 5 days.
Roquette from 5 to 10 days.
Salsify from 8 to 14 days.
Sorrel from 8 to 14 days.
Spinach from 8 to 14 days.
Squash from 5 to 10 days.
Tomatoes from 5 to 15 days.
Turnip from 5 to 7 days.

FIELD AND GRASS SEEDS.

Clover Seed from 25 to 35 days.
Clover Seed, Japan, from 30 to 40 days.
Clover Seed, Burr, 60 to 90 days.
Kentucky Blue Grass from 14 to 21 days.
Red Top Grass from 14 to 21 days.
English Rye Grass from 8 to 15 days.
Rescue Grass from 20 to 30 days.
Johnson Grass from 30 to 40 days.
Tall Meadow Oat Grass from 14 to 21 days.
Meadow Fescue Grass from 8 to 15 days.
Orchard Grass from 8 to 15 days.
Timothy Grass from 15 to 25 days.
Rye Seed from 12 to 20 days.
Barley Seed from 12 to 20 days.
Wheat Seed from 12 to 20 days.
Oat Seed from 12 to 20 days.
Sorghum from 10 to 15 days.
Kaffir Corn from 10 to 15 days.
Broom Corn from 10 to 15 days.
Dhouro Corn from 10 to 15 days.
Millet Seed from 8 to 15 days.
Sunflower Seed from 5 to 10 days.
Buckwheat from 10 to 20 days.
Vetch from 15 to 20 days.
Teosinte from 30 to 40 days.
Bermuda Grass from 60 to 90 days.

SWEET AND MEDICINAL HERBS.

Anise from 12 to 15 days.
Balm from 8 to 12 days.
Bene from 12 to 15 days.
Basil from 8 to 12 days.
Borage from 8 to 12 days.
Caraway from 10 to 15 days.
Dill from 12 to 15 days.
Fennel from 12 to 15 days.
Lavender from 8 to 12 days.
Marjoram from 8 to 12 days.
Rosemary from 8 to 12 days.
Rue from 5 to 10 days.
Sage from 12 to 15 days.
Savory from 5 to 10 days.
Thyme from 12 to 15 days.
Wormwood from 8 to 12 days.

THE HOT BED.

Owing to the open winters in the South, hot-beds are not so much used as in the North, except to raise such tender plants as Eggplants, Tomatoes and Peppers. There is little forcing of vegetables done here, except as regards Cucumbers and Lettuce; and if we do not have any hard frosts, the latter does better in the open ground than under glass. To make a hot bed is a very simple thing. Any one who has the use of tools can make the wooden frame, the sashes can be obtained from any sash factory. We consider a wooden frame from 5 to 6 feet wide and 10 feet 6 inches long a very good size. It should be at least six inches higher at the back than in the front, and covered by three sashes $3\frac{1}{2} \times 5$ feet. The manure

ought not to be more than a month old; it should be thrown together in a heap, and when commencing to heat, be worked over with a fork, and the long and short manure evenly mixed. In this State the ground is generally low, and to retain the heat of the manure for a long time, it is best to put the manure on top of the ground—that is, make a bank two feet longer and two feet wider than the frame. Keep the edges straight and the corners firm; when thrown up about eighteen inches trample the manure down to six or eight inches, then put another layer of eighteen inches and trample down again; place thereon the frame and sash and fill in six inches of good earth. After about five days stir the ground to kill

Steckler's French Market Corn is a Favorite.

the weeds which may have come up, then sow the seeds. In lower Louisiana the ground is too wet to dig out eighteen inches deep, throw in the manure and trample down as recommended in the North, by a few hard rains, such as we frequently have in winter, the manure would become so soaked beneath ground that the heat would be gone. Another ad-

vantage when the frame is put above the ground, is that it will go down with the manure gradually, and there remains always the same space between the glass and the ground. If the ground is dug out and the manure put into the frame, the ground will sink so low after a short time that the sun will have little effect upon it and the plants will become spindly.

Seeds Requisite to Produce a Given Number of Plants and Sow a Given Amount of Ground.

	Quantity Per Acre.
Artichoke, 1 oz. to 500 plants.....	$\frac{1}{4}$ lbs
Asparagus, 1 oz. to 200 plants.....	5 lbs
Barley.....	2½ bu
Beans, dwarf, 1 quart to 150 feet of drill.....	$\frac{1}{4}$ bu
Beans, pole, 1 quart to 200 hills.....	$\frac{1}{2}$ bu
Beets, garden, 1 oz. to 100 feet of drill.....	10 l s
Beets, Mangel, 1 oz. to 150 feet of drill.....	6 lbs
Broccoli, 1 oz. to 3000 plants.....	5 oz
Broom Corn.....	10 lbs
Brussels Sprouts, 1 oz. to 3000 plants.....	5 oz
Buckwheat.....	$\frac{1}{2}$ bu
Cabbage, 1 oz. to 3000 plants.....	5 oz
Carrots, 1 oz. to 250 feet of drill.....	2½ lbs
Cauliflower, 1 oz. to 3000 plants.....	5 oz
Celery, 1 oz. to 10,000 plants.....	4 oz
Clover, Alsike and White Dutch.....	6 lbs
Clover, Large Red and Crimson Trefoil.....	8 lbs
Clover, Alfalfa or Lucerne.....	30 lbs
Clover, Medium.....	10 lbs
Collards, 1 oz. to 2500 plants.....	6 oz
Corn, sweet, 1 quart to 500 hills.....	8 qts
Cress, 1 oz. to 150 feet of drill.....	8 lbs
Cucumber, 1 oz to 80 hills.....	1½ lbs
Eggplant, 1 oz. to 2000 plants.....	3 oz
Endive, 1 oz. to 300 feet of drill.....	3 lbs
Flax, broadcast.....	$\frac{1}{2}$ bu
Gourd, 1 oz. to 25 hills.....	2½ bu
Grass, Kentucky Blue.....	2 bu
Grass, English or Perennial Rye.....	3 bu
Grass, Hungarian and Millet.....	$\frac{1}{2}$ bu
Grass, Mixed Lawn.....	3 bu
Grass, Orchard, Red Top, Tall Meadow Oat and Meadow Fescue.....	2 bu
Garlic, bulbs, 1 lb. to 10 feet of drill.....	2 bu
Hemp.....	$\frac{1}{2}$ bu

	Quantity Per Acre.
Kale, 1 oz. to 3000 plants.....	4 oz
Kohlrabi, 1 oz. to 200 feet of drill.....	1½ lbs
Leek, 1 oz. to 250 feet of drill.....	4 lbs
Lettuce, 1 oz. to 250 feet of drill.....	3 lbs
Melons, Musk, 1 oz. to 100 hills.....	1½ lbs
Melons, Water, 1 oz. to 25 hills.....	1½ lbs
Nasturtium, 1 oz. to 50 feet of drill.....	10 lbs
Oats.....	2½ bu
Okra, 1 oz. to 50 feet of drill.....	10 lbs
Onion Seed, 1 oz. to 200 feet of drill.....	4 lbs
Onion Seed for transplanting.....	1½ lbs
Onion Seed for sets.....	30 lbs
Onion Sets, 1 quart to 20 feet of drill.....	8 bu
Parsnip, 1 oz. to 250 feet of drill.....	5 lbs
Parsley, 1 oz. to 250 feet of drill.....	8 lbs
Peas, garden, 1 quart to 160 feet of drill.....	1½ bu
Peas, field.....	2½ bu
Pepper, 4 oz. to 1500 plants.....	4 oz
Potatoes.....	10 bu
Pumpkins, 1 quart to 300 hills.....	4 qts
Radish, 1 oz. to 150 feet of drill.....	8 lbs
Rye.....	1½ bu
Salsify, 1 oz. to 60 feet of drill.....	8 lbs
Spinach, 1 oz. to 150 feet of drill.....	10 lbs
Summer Savory, 1 oz. to 500 feet of drill.....	2 lbs
Squash, summer, 1 oz. to 40 hills.....	2 lbs
Squash, winter, 1 oz. to 10 hills.....	3 lbs
Tomato, 1 oz. to 3000 plants.....	3 oz
Tobacco, 1 oz. to 5000 plants.....	2 oz
Turnip, 1 oz to 260 feet of drill.....	1½ lbs
Vetches.....	2 bu
Wheat.....	1 to 2 bu

The foregoing calculations are made for sowing in spring, during the summer it requires double the quantity to give the same amount of plants.

DESCRIPTIVE CATALOGUE OF VEGETABLE SEED.

Artichoke.

FOR PRICE LIST SEE RED PAGES IN BACK OF BOOK.

Artichaut (Fr.), Artischoke (Ger.), Alcachofa (Sp.), Articocea (Ital.)

Green Globe Artichoke.

Asparagus.

FOR PRICE LIST SEE RED PAGES IN BACK OF BOOK.

Asperge (Fr.), Spargel (Ger.), Espargos (Sp.), Sparagio (Ital.)

CULTURE. The ground should be well manured or seeds are planted. For this climate the sowing of seed is preferable. Plant the seed in early spring. Soak over night in water, plant in rows, or rather hills, one foot apart and two feet between, or three if to be cultivated with a plow; put from four to five seeds in each hill; when well up thin out to two plants. The following winter when the stalks are cut off cover with a heavy coat of well rotted manure and a sprinkling of salt; fish-brine will answer the same purpose. In the spring fork in manure between the rows and keep clean of weeds. The same treatment should be repeated every year. The bed should not be cut before being three years established. Care must be taken not to cut the stalks too soon in the fall of the year—not until we have had a frost. If cut before, it will cause the roots to throw up young shoots, which will weaken them.

CULTURE Artichokes are extensively cultivated for the New Orleans Market. It is the best propagated from suckers, which come up around the large plants. Take them off during the fall and early winter months, plant them four feet apart each way. Every fall the ground should be manured and spaded or plowed between them; at the same time the suckers should be taken off. If planted by seed, sow in drills during winter or early spring, three inches apart and one foot from row to row, cover with about one-half inch of earth. The following fall the plants can be transplanted and cultivated as recommended above. The seeds we offer are imported by us from Italy and France, and of superior quality.

Large Green Globe. Very popular in the South, and much esteemed. We can also furnish sprouts or Plants in the fall of year at 50c. per doz., \$2.00 per 100, \$15.00 per 1000.

Columbia White Mammoth.

Seed Drills, all the Best Kinds.

Conover' Colossal. The most approved and standard variety.

Columbia White Mammoth Is more robust and vigorous growing than either Conover's Colossal or Palmetto, producing stronger sprouts of a creamy white color and more tender than any other variety. It is claimed that as the sprouts are white and tender it is not necessary to be planted as deep as the Colossal, but this is a mistake; all varieties

must, in order to get tender sprouts, be planted the same depth, that is, the crowns of the plants must be at least from 8 to 10 inches below the surface of the ground.

Palmetto. Another good variety, especially adapted to the South. The sprouts are strong, of vigorous growth, very tender and not bitter. We recommend this variety highly, knowing it to be one of the best for our climate.

Beans (Dwarf or Bush.)

FOR PRICE LIST SEE RED PAGES IN BACK OF BOOK.

Haricot (Fr.), Bohne (Ger.), Haba (Sp.), Fagiolini (Ital.)

CULTURE. Place in rows eighteen inches apart; drop a bean every two or three inches. Plant from end of February, and for succession, every two or three weeks to May. Bush Beans planted in this latitude during June and July will not produce much. August and September are good months in which to plant again; they will produce abundantly until killed by the frost. Do not cover the seeds more than two inches.

Improved Valentine.

This variety has all the qualities of the old Valentine, only it is 10 days earlier, a great consideration when planted for the market; it has taken the place of the old variety of Valentine.

Improved Prolific Dwarf German Wax.

This variety is a great improvement on its parent, the Dwarf German Wax. Pods are longer and more productive, with the good qualities of the old kind, which was the first Wax Bean introduced here from Germany.

Grenell's Improved Rust Proof Dwarf Golden Wax.

An improvement on the Dwarf Golden Wax Bean; the seed is identically the same color as that kind. The pods are straight, long and fleshier than Golden Wax, superior in quality and positively "Rust Proof," quite an object with us here in the South, when we often have rainy weather in the spring, which is injurious to most wax beans. The originator also claims it to be more prolific and harder than the ordinary Golden Wax.

Early Mohawk Six Weeks.

A long podded variety, and very hardy. It is used to a great extent for the market for the first planting; very productive.

Early Yellow Six Weeks.

This is the most popular sort among market gardeners. Pods flat and long; a very good bearer, but not so good for shipping as the Mohawk or Valentine.

Detroit or Rust Proof Wax. This splendid wax bean is very productive and hardy; pods straight, flat and somewhat broader than the Dwarf Golden Wax. The beans, when well grown, are of a beautiful golden yellow. The originator claims that when tried side by side with the majority of wax beans, it had never "spotted or rusted," while most of the other varieties were unsalable. He claims it to be the best bean for shipping.

Improved Valentine.

Pride of Newton.

Extra Early Refugee. Is an improvement on the well-known old Refugee. Very early and prolific. Owing to its good qualities it has become a favorite with the market gardeners for shipping. Pods round and fleshy.

Giant Stringless Green Pod Dwarf. With all the merits of its name-sake it has in addition larger pods and is more productive. Pods of this variety are one-third larger than Valentine, and it is claimed that it is earlier; not so early as the original Stringless Green Pod, but it is desirable to plant with that variety for a succession. It retains all the characteristics and good qualities of its parent, but with a very much larger and more showy pod. In quality no variety surpasses it; gardeners and truckers should give it a thorough trial.

Keeney's Rustless Golden Wax. This is the long looked for bean, combining hardiness and productiveness with fine quality. A strong growing bush variety of remarkable vigor and freedom from rust.

Pride of Newton. This is a robust strong growing bean with long flat pods, which are light green. It is quite early and productive. The bean is similar to the Yellow Six Weeks in color, but much hardier.

Bountiful. A broad flat podded variety which is very productive and not likely to rust; it is considered by a great many people to be a very superior bean.

White Kidney. A good, strong growing variety, should be planted more extensively.

Red Kidney. A kind largely planted for the New Orleans market. It is a coarse growing variety, and much used for shelling when the pods turn yellow, so that the beans are well developed, but yet soft.

Steckler's New Calico Bush Butter. Raising this specialty is strongly recommended, as it gives universal satisfaction; it being a very early variety, making strong vigorous vines, branching out with many shoots or stems and bearing clusters of beans from bottom to top. When in full bearing it is easy for one picking the beans to gather a handful of nice beans at a single grasp. The flavor of this bean is excellent; it is used either as a green bean or dry shelling. When gathered green it is a beautiful waxy white color and at maturity it has a mingled color of white, brown and red, making it a distinctive calico variety. It is especially recommended for summer crop, to supply the table in hot weather; it will stand the heat of any climate and bear profusely all summer, as it is very prolific.

White Wax. A desirable snap bean. Pods are broad, flat, yellow and semi-transparent when boiled, and is of a delicate flavor.

Extra Early Refugee.

Use Raffia for Budding, Tying, Etc., Cheaper than Twine and lasts Louger.

Dwarf Flageolet Wax.

A German variety which figures as Perfection Wax, also Scarlet Flageolet Wax in some catalogues. It is a robust growing sort with large fine yellow pods. For several years we have tried to introduce it amongst the gardeners who still give the Wardwell's Kidney the preference.

Davis Wax. Without a doubt the best white seeded Dwarf Wax Bean in cultivation. The pods are clear waxy white, long, straight and thick. It is very early, productive and handsome in appearance. The plant is of a sturdy robust habit, which enables it to hold up the pods from coming in contact with the soil. Good for shipping.

Longfellow Green Podded.

An extra early variety, of fine quality, an ideal snap bean, a prolific producer of perfectly round, straight, solid, fleshy pods averaging $6\frac{1}{2}$ inches long; wonderfully tender and brittle, without a trace of tough interlining, and having no string when broken, excepting when the pods are quite old. The flavor is delicious, captivating the most critical, while the delicate green color of the pods is retained after cooking, adding to its attractiveness when served. The plants are of robust habit, unexcelled in bearing qualities, maturing the crop very regularly. It is extra early, the pods being fit to pick four days in advance of any other variety of approximate size and merit.

Burpee's Bush Lima. The pods are of same size as the Large Pole Lima and of same flavor. It is a stronger grower than the Henderson's Bush Lima.

Burpee's Bush Lima.

Black Valentine. This variety has all the good qualities of the Red Speckled Valentine and is much earlier, which

Dwarf Flageolet Wax.

is a great consideration when planted for the market. It is a bean worthy of being planted in every family garden.

Currie's Rust Proof Wax. This is an early productive, good bean, having long, flat, yellow pods of fine quality. Foliage healthy and rust proof.

Currie's Rust Proof Wax.

We are Headquarters for Field Peas in their Season.

Burpee's Stringless Green Pod.

Steckler's New Perfectly Straight Round Bush.

This is a strong upright grower; holds its fruit exceedingly well; beans perfectly round and straight; extra heavy bearer and is two weeks earlier than the long favorite grown around New Orleans, the "Best of all Beans." It is planted by the most experienced vegetable gardeners of the Crescent City, and pronounced the best green Bush Bean yet introduced. Experience has shown it to do well both in the Spring and Fall.

Round Pod Kidney Wax.

A great improvement over Wardwell's Kidney Wax, as it has a true round pod of fully as good quality as that flat-podded sort. Then, as it is much more hardy and produces much better crops, we recommend it as one of the finest sorts for the Southern grower, home market or for family use.

Steckler's Original Stock Best of All.

A well-known green snap bean from Germany. American soil and culture will not produce the same variety that is grown in the Fatherland. In order to make a distinction between the two varieties, we have decided to adopt the above name, which will be a guarantee that our customers will secure the genuine article.

Early Refugee or Thousand-to-One.

A very excellent variety, very similar to the Valentine when green though a stronger grower; is fit for the table in about seven weeks, very productive and the best of all varieties for canning.

French Market Green Pod Bush.

It has become very popular amongst our New Orleans gardeners, very fine for general use. Pods long green, perfectly round and smooth; it is as early as

Burpee's Stringless Green Pod

Is most happily named, as it is quite unique—the first stringless green pod Bush Bean. The illustration herewith, taken from nature, shows the handsome, straight green pods; all are absolutely stringless and of the beautiful fleshy appearance shown. The pods ready to market two weeks earlier than the best stock of Improved Valentines.

Hodson Wax.

A new and distinct type of wax bean; strong, healthy growth, and resists rust and blight to a remarkable degree. Remarkably prolific, the plant being loaded with long, straight handsome pods, resembling the Wardwell's Kidney Wax, but plumper, straighter and longer. The pods are brittle, tender, of fine texture and splendid flavor. An excellent main crop sort for shipping and market, as well as for home use.

Yard Long.

A splendid snap bean. The pods average two feet or more in length, are round, somewhat glossy, having the thickness of a lead pencil.

the Refugee, but of a grand quality, as good keeper when picked. We recommend it highly for shipping and profitable planting.

Dwarf Butter Wax. This variety is also sold under the name of "Bismark" and "Rust Proof Wax." It is very early, an excellent bearer, pods similar in shape to the Wardwell's Dwarf Kidney Wax; they are very brittle and of fine flavor. Not as liable to rust as other kinds. The seed is of a dark purple color when dried.

Wardwell's Dwarf Kidney Wax.

Undoubtedly the best dwarf wax bean in cultivation; it is quite early; the pods are of similar shape to the Golden Wax, but longer; color of a beautiful golden yellow. They are very prolific and hardy, surpassing any other Dwarf Wax that we know of. The color is somewhat like the Golden Wax, but more kidney shaped and more spotted with dark purple. It has done best here among the Dwarf Wax Beans. Of all the many new kinds we have tried, we found none to excel it.

Best of All.

A variety from Germany of great merit, introduced by Richard Fritsch. It is green podded, long and succulent; very prolific and well flavored. Excellent for shipping and family use. Although not quite so early as the Mohawk, it is of superior quality for shipping, and therefore almost the only kind planted here for that purpose.

Henderson's Bush Lima.

This is a Dwarf Butter Bean, growing from 13 to 24 inches high. It is early and productive. It should be called Dwarf Carolina or Sewee Bean, as the pods are the size of that variety.

Henderson's Dwarf Lima.

Best of All (two-thirds natural size.)

Beans (Pole or Running.)

FOR PRICE LIST SEE RED PAGES IN BACK OF BOOK.

Haricots a Rame (Fr.), Stangen Bohnen (Ger.), Frigolo Vastago (Sp.), Faginoli (Ital.)

CULTURE. Lima Beans should not be planted before the ground has become warm in spring. Strong poles ought to be set in the ground from four to six feet apart and the ground drawn around them before the seed is planted. It is always best to plant after a rain and with the eye of the bean down. The other varieties can be planted flat, and not more than three or four feet apart and hilled after they are up. Do not cover the seeds more than two inches; one inch is enough for the Southern Prolific and Crease Back.

White Crease Back.

White Crease Back. A variety of Pole Beans which have been cultivated in the South for a long time but had

never come into the trade until introduced by Richard Frottscher. It is an excellent bean, earlier than the "Southern Prolific." Seeds white; pods round, with a crease in the back, from which the name. It is a good grower, bears abundantly, and, if shipped, will keep better than most other kinds. It sells better in the spring than any other for shipping purposes, and when in season cannot be surpassed.

Cut Short. This is a pole bean, an old variety, sometimes known as the "Cornhill" from the fact that it is quite often planted with corn and allowed to climb up the stalks. The pods are round, short and tender. It is quite a favorite in some sections.

Improved Kentucky Wonder, or Old Homestead. This is the earliest of all green podded pole beans. Enormously productive, bearing its pods in clusters. The pods are long, crisp, tender and bright green in color. A prolific variety, one of the best on our list.

Lazy Wife's. The pods are entirely stringless, 4 to 5 inches long, and have a fine flavor. They retain their rich flavor until nearly ripe. The beans are white and fine as a shell bean.

Large Lima. An excellent variety. It is the best shell bean known. Should have rich ground, and plenty of room to grow.

Early Golden Cluster Wax Pole.

Early Golden Cluster Wax.

This is the earliest, Wax Pole Bean in cultivation; pods from 5 to 8 inches long, produced in clusters. The pods are golden yellow; for shipping they are rather too wide. It has not the same fine appearance as the Flageolet. For family use it cannot be too highly recommended on account of its productiveness and delicious flavor.

Perfectly Round, Straight Imported White Crease Back Pole.

Latest introduced, which from tests made by the most critical market gardeners surrounding New Orleans, have been pronounced to be entirely satisfactory; same type as the old style Crease Back Pole Beans, except that this bean is perfectly round and straight.

Carolina or Sewee. Similar to the Lima; the only difference is the seeds and pods are smaller. It is generally cultivated.

Dutch Case Knife. A very good pole Bean; it is early; pods broad and long; somewhat turned toward the end.

Seibert's Lima. Is claimed to be the earliest Pole Lima Bean in cultivation. It is a large podded variety of first class quality.

Southern Prolific. No variety will continue longer to bear than this. It stands the heat of summer better than any other, and is planted to succeed the other kinds. It is a very strong grower; pods about seven inches long and flat; seeds are dark yellow or rather light brown. The standard variety for the New Orleans market for late spring and summer. If planted in July or August it will continue to bear until frost sets in.

English Beans.

FOR PRICE LIST SEE RED PAGES IN BACK OF BOOK.

Gourganne or Fève de Marais (Fr.), Puff Bohnen (Ger.), Haba Comun (Sp.)

Broad Windsor. Should be planted in drills two and a half feet apart, | every 6 inches one bean, during November; as if planted in the spring it will not produce much,

Beets.

FOR PRICE LIST SEE RED PAGES IN BACK OF BOOK.

Betrave (Fr.), Roth-Ruben (Ger.), Remolacha (Sp.), Barbabietola (Ital.)

CULTURE. The ground for Beets should be rich and well spaded or plowed. Sow in drills twelve to eighteen inches apart, cover the seed about one inch deep. When about a month old, thin them out to four or six inches apart. In this latitude beets are sown from January till the end of April, and from the middle of July to the middle of November; in fact some market gardeners sow them month in the year. In the summer and fall it is well to soak the seeds over night and roll in ashes before sowing.

Try Steckler's New Calico Bush Butter Beans.

Lentz. A strain of Blood Turnip Beet. It is fully as early as the Egyptian Beet, and it has a fine Turnip form with smooth roots, dark blood red flesh, tender and sweet at all times, never becoming tough and stringy, even when old. The cut is an exact representation of its shape.

Extra Early or Bassano. Is the earliest variety, but not popular on account of its color, which is almost white when boiled.

Silver Bett or Swiss Chard.

Silver Beet or Swiss Chard.

This variety is cultivated for its large succulent leaves, which are used for the same purpose as Spinach. It is very popular in the New Orleans market.

Long Red Mangel Wurzel. This is raised for stock; it grows to a large size. Here in the south where stock is not stabled during the winter, the raising of root crops is much neglected. Being very profitable for feeding it ought to be more cultivated.

Edmond's Early Blood Turnip.

A well selected variety; regular in shape; deep blood skin, dark flesh of excellent quality. Small tap root and small top.

Eclipse. Introduced from Germany; very regular; of globular shape. It has a small top, is of dark blood red color, sweet and fine grained flesh. It comes earlier than the Egyptian.

Golden Tankard Mangel Wurzel.

A distinct variety, particularly valuable on account of its richness in saccharine matter; highly prized by dairymen for its milk-producing qualities. All stock will thrive on it. Deep yellow flesh and skin.

Dewing's Early Red Turnip Beet.

Dewing's Early Red Turnip.

This is earlier than the Blood Turnip, smooth skin and of light color; planted a good deal by the market gardeners about New Orleans, and called by them Half Red.

Detroit Dark Red. A choice variety of early Turnip beet, skin dark red, flesh bright red. It grows very smooth, globular shape and is tender and sweet.

Eclipse.

Best of all Beans, we know of no better for all purposes.

Extra Early Egyptian Red Turnip.

Crosby's Egyptian. An improvement on the Early Red Egyptian, being of more uniform shape and color. Recommend same highly.

Chicago Early Blood Turnip.

Extra Early Perfect. The Extra Early Beet is a very handsome dark red blood beet, nearly globe shape, but having a tendency to a slightly oblong form.

Extra Early Egyptian Red Turnip.

This is a well known variety, very early, tender, deep red and of Turnip shape. Leaves of this variety are smaller than the others. The seeds are also much smaller. We recommend it and consider it a good acquisition. The seed of this variety is obtained by us from the original source and is the finest stock offered. It increases in popularity every year.

Frotscher's Three-quarter Red.

A decided improvement on the Blood Turnip, excellent for family use and also for shipping, retains its color longer than any other variety, quick growth and not much foliage.

Chicago Early Blood Turnip.

A splendid beet for market and shipping. Very handsome, perfect in form, and deep bright red color. It is early, crisp, tender and sweet, and has very little foliage. One of the finest beets under cultivation.

Half Long Blood.

A very dark red variety, a good kind for family use.

White French Sugar.

White French Sugar. This is also a good stock beet, highly prized throughout the world; is productive, nutritious, and has good keeping qualities. It is extensively grown in France, both for feeding purposes and for the manufacture of sugar, which is more extensively used there than that made from the Cane.

Early Blood Turnip.

Early Blood Turnip. The most popular variety for market purposes as well as family use. It is a dark red color and very tender. This is the principal variety planted for shipping. Our stock is raised for us from dark selected smooth roots, and cannot be excelled.

Long Blood. A very desirable variety for light soils, where roots are easy to dig. Skin very dark brownish red. Flesh deep blood red.

Crimson Globe. This beet is remarkable for its smooth skin and fine shape. We have been growing it on our trial grounds for several years, and could not help noting its many desirable qualities. It is a second early variety, does not grow large and coarse, the matured beets being medium in size and rather oblong in shape. The flesh and skin are both very dark and quality fine, being sweet and tender. The tops are small and dark in color. We are confident that this beet will please all who plant it.

Steckler's Extra Early. The earliest red variety in cultivation. Unequalled in quality. It originated with a leading market gardener, and was brought to perfection after years of careful cultivation. It is a rich, blood red beet of fine grain and flavor, is earlier than either the Egyptian or Eclipse, of smooth and rapid growth; top and tap roots being very small. Market gardeners should not fail to give it a trial.

Dwarf German Greens.

Borecole or Curled Kale.

FOR PRICE LIST SEE RED PAGES IN BACK OF BOOK.

Choux-vert (Fr.), Gruener Kohl (Ger.), Breton (Sp.), Cavolo Verde (Ital.)

CULTURE. This variety of the Cabbage tribe is known as Curly Green or Kale. Sow the seeds in spring and transplant with the late Cabbage in early summer. For fall

crop sow early in September in drills or broadcast, they will produce small heads or tops which can be used during the Winter months, if slightly covered with manure or litter will continue growing until spring, the leaves are fit for use as soon as they get a touch of frost. To preserve them during the early winter, treat them the same as Cabbage.

Dwarf German Greens. Is a dwarf, very hardy and popular variety with market gardeners.

Brussels Sprouts.

Brussels Sprouts.

FOR PRICE LIST SEE RED PAGES IN BACK OF BOOK.

Choux de Bruxelles (Fr.), Rosen or Sprossen Kohl (Ger.), Breton de Bruselas (Sp.), Cavolo de Brussells (Ital.)

CULTURE. A vegetable cultivated the same as cabbage. The small heads which appear along the upper part of the stalk between the leaves make a fine dish when well prepared. Should be sown during August and September

Broccoli.

FOR PRICE LIST SEE RED PAGES IN BACK OF BOOK.

Choux Broccoli (Fr.), Spargel-Kohl (Ger.), Brocoli (Sp.), Brocoli (Ital.)

Purple Cape. Resembles the Cauliflower, but not forming such compact heads, and not quite so white, being of greenish cast. This is the most desirable variety, cultivated the same as Half Early Cauliflower. Further north than New Orleans, where Cauliflower does not succeed, the Broccoli may be substituted, being hardier.

Cabbage.

FOR PRICE LIST SEE RED PAGES IN BACK OF BOOK.

Choux Pomme (Fr.), Kopfkohl (Ger.), Repollo (Sp.), Cavolo Capucchio (Ital.)

CULTURE. Cabbage requires a strong, good soil and should be heavily manured. To raise large Cabbage without good soil and without working the plants well is an impossibility. Cabbage is sown here almost every month of the year, but the seed for the main crop should be sown from

When in Doubt Consult Steckler.

July to September. Some sow earlier, but July is time enough. For a succession seed can be sown till November. The main crop for spring should be sown from end of October to end of November, as stated before. The raising of Cabbage for spring has become quite an item of late years. Brunswick should be sown a little earlier than the Early Summer; the latter kind not till November, but in a frame, so the young plants can be protected against cold weather, which we generally have between December and January. After the middle of January setting out can be commenced with. These early varieties of Cabbage require special fertilizing to have them large. Early varieties are sown during the winter and early spring. Cabbage is a very important crop, and one of the best paying for the market gardener. It requires more work and attention than most people are willing to give to raise cabbage plants during the months of July and August. We have found, by careful observation, that plants raised in August are the surest to head here. The most successful gardeners in raising cabbage plants sow the seeds thinly in seed beds, and water several times during the day; in fact the seed bed is never allowed to get dry from the sowing of the seed till large enough to transplant. There is no danger in doing this of scalding the plants, as many would suppose, but on the contrary the plants thrive well, and so treated will be less liable to be attacked by cabbage flies, as they are too often disturbed during the day. Tobacco dust scattered on the plants and in the walks between the beds, is a sure preventive against insects.

Steckler's New Money Making.

Steckler's New Money Making.

Has never been known to fail since its introduction by us in 1902, and cannot be equalled as a positive cropper by any variety known on the market to date. The extreme and varying conditions of the climate have only heightened the popularity of this Cabbage as a money-maker; this is evidenced by the many testimonials received from those who have planted it. There are many reasons why this cabbage surpasses all other varieties, viz: it is a sure header, every plant makes a head in size and solidity surpassed by none; it keeps longer than any other variety, grows bigger and better the longer it remains in the field—does not rot or burst.

Autumn King or World-Beater.

An extremely large and solid heading variety. The plant is of extra strong growth, with dark bluish-green leaves growing closely about the large flattened heads. In good soil it will produce heads of enormous size, but, of course, requires a longer season for growth than do the smaller varieties.

Jersey Wakefield. Very popular; is of medium size and heads up well.

Early York. An early variety, grown here mostly for family use. Highly recommended

Large York. About two or three weeks later than the above, forming hard heads not grown for the market. Recommended for family use.

St. Louis Late Market. The very best late Cabbage in existence. It never fails to make a crop; runs heavy in weight owing to its size, and solidity; is the longest keeper of any; gets bigger and better the longer it stands and never rots or bursts; resists drought and insects by its sturdy constitution; can be cut as early as any late sort, continues growing after others have matured.

New Orleans Market Cucumber Should be Planted Before any Other.

Louisville Drumhead. A strong and vigorous, but not coarse growing sort of Flat Dutch type. Plants short stemmed and compact, with broad, well rounded, large leaves, very full at base. Head semi-flat, thick and of good quality.

Early Drumhead. A similar variety to Early Flat Dutch; earlier, and not making as many leaves, it can be planted close. A good early spring cabbage.

Improved Large Late Drumhead.

Green Globe Savoy. Medium sized heads, not very hard, but all the leaves can be used. This and the following varieties are of fine flavor, and preferred by many over the other kinds.

Early Dwarf Savoy. Head rather small but solid; leaves very curled and succulent; of a dark green color. Very fine for family garden.

Drumhead Savoy.

Improved Large Late Drumhead. Fine large variety; should be sown early in the fall for winter, or during December and January for late spring use; it will stand more cold than the Brunswick.

Drumhead Savoy. Leaves are wrinkled, but not quite so much as the foregoing kinds. It grows to a good size with large roundish head.

Succession:

Succession. Resembles the German Brunswick, but not quite so large, and is of same season. It heads up very regularly and uniform; should be planted same time as the Early Summer and Brunswick for a spring crop.

St. Denis or Chou Bonneuil.

A very popular variety. It does better for spring than for fall, should be sown in November.

Plant Tobacco Seed for Your Own Consumption.

Pride of the South. An excellent variety, resembling the German Brunswick closely in appearance and color, but more globular in shape, not quite as large and equally as early. In growth it is very uniform, heading regular and very firm and is a good shipping variety. The seed should be sown during the months of October and November for spring crop and will come in at the same time with the Brunswick and Early Summer.

All Head Early.

All Head Early. The largest heading of the second early sorts, of excellent quality. The deep flat heads are remarkably solid, and very uniform in size, of a very compact growth, having few outer leaves, can be planted as close as the Wakefield.

Early Winningstadt. This is a very solid heading variety; pointed, of good size and of the same season as the Oxheart. Very good.

Red Dutch. Best hard-headed, red variety. Large heads, globular, and very deep red on top. Outer leaves greenish. Especially used for pickling.

Solid South.

Solid South. A cabbage introduced by one of the leading cabbage growers on Long Island. It is of the same season as the Early Summer, but more regular in shape than that variety, and very hard heading; the crop can be cut almost at one time.

Charleston Wakefield. This is a few days later than the Early Jersey Wakefield, but makes a larger and firmer head. We strongly recommend it as the best main crop early cabbage grown, for the home garden and market. Our seed of this is grown from a specially selected stock.

Steckler's French Market Winter.

Steckler's French Market Winter. This is a fine strain of an immense winter cabbage grown on Long Island. It is one of the most uniform heading varieties ever brought to this market. The heads are larger than the Crescent City Large Late Flat Dutch, very solid, dark green in color, and matures as early. Fine for shipping.

Premium Late Flat Dutch. Among the earliest of the winter Cabbages, of fine flavor, very tender.

All Season.

All Season. An excellent market variety, the heads are large and solid, globular in shape, the ribs pinkish and not quite as thick as of the Superior Flat Dutch. Will stand heat and drouth better than any other variety.

Early Flat Dutch. An intermediate kind between the early pointed and late varieties. It is not, on an average, as heavy as the Oxheart or Winningstadt, but if raised for the market more suitable on account of being flat. Very good variety for family use.

Selected Early Jersey Wakefield.

Selected Early Jersey Wakefield.

Our stock of this is very superior, and it has attained a big reputation with truckers and market gardeners wherever grown. It is an ideal market gardener's first early cabbage, and is suited alike for the family garden and market. Not only is the head large and solid for so early a cabbage, but the outside foliage permits of close planting, and its uniformity and reliability for producing a crop makes it a general favorite.

Stein's Early Flat Dutch.

Stein's Early Flat Dutch. This is one of the earliest cabbages for its size. The demand for the seed has steadily increased since it was introduced. It is a sure header, very regular and well adapted for shipping. Is planted exclusive of all other kinds by some of the largest cabbage growers in this vicinity.

Premium Late Drumhead. A standard late cabbage, with full, firm, solid, round heads of immense size and excellent flavor; a good keeping, excellent market variety.

Faultless.

Faultless. This strain of cabbage is one which we have been at work on for several years until we have now, in our judgment, one of the best stocks of second early cabbage, a little earlier than Stein's Early flat Dutch, remarkably uniform in its habit of growth, producing deep flat heads which are very hard. The stock heads up practically all at one time. The leaves are light green in color, broad with medium growth of plant outside of heads. The field from which the seed was taken produced fully 99 per cent. of large heads very uniform in size and very attractive in appearance.

Early Large Oxheart. An excellent variety, which is later than the Large York, and well adapted for sowing in fall or early spring.

Frotscher's Large Purple or New Orleans Market Eggplants.

Frotscher's Superior Large Late Flat Dutch.

Frotscher's Superior Large Late Flat Dutch.

This is the most popular variety for winter cabbage, and cultivated by almost every gardener who plants for the New Orleans market. Heads are large and solid, often weighing from 15 to 25 pounds. In regard to the time of planting, see remarks under the head of "Cabbage" in the directions for planting for July. We have tried seed of the Flat Dutch from different growers, but have found none yet to equal the stock which is raised for us by contract.

Sure Head.

Sure Head. (Genuine Stock from the originator.) Remarkable for its certainty to head. Produces very large, flattened heads, weighing from ten to fifteen pounds; very uniform and firm.

Large Flat Brunswick. This is a late German variety, introduced here many years ago by Richard Frotscher. It is an excellent kind, and when well headed up the shape of it is a true type of a premium Flat Dutch Cabbage.

Danish Ball Head. (Hollander). This extra hard-heading variety originated in Denmark. It is the medium-sized, hard white that is received from abroad during the early spring months, and even after the long journey arrives in splendid condition. It is a medium or late variety, used mostly as a winter cabbage.

Orleans Pride.

Orleans Pride. Earliest variety heading cabbage. It is a selected cross between the Jersey Wakefield and the Early Flat Dutch, afterwards improved by selection of stock until it produces uniformly a fine head. This cabbage is the earliest flat heading cabbage that is now known in any market, maturing at about the same season as the Charleston Wakefield. It should be planted closely in rows, as there is but little outside growth, and, when so planted, will produce fine crops of solid heads of very fine quality. Wherever it has been used, we have had most excellent reports from it. We recommend same highly for market and family use.

Steckler's New Lead

er. This Cabbage has been tested by our market gardeners here who praise it and recommend it very highly. It resembles somewhat that of the Brunswick, but not quite so flat and broad, but about the same season. It is a regular header and uniform.

Creole.

A northern strain of Flat Dutch grown in Louisiana some years, making it a hybrid, can be planted as early as June 1st. It is generally used for bunch greens but often affords a good, hard head of dark greenish color.

**STECKLER'S
NEW LEADER
CABBAGE**

**SINGLE
HEAD
26 LBS.**

Crescent City Flat Dutch.

Crescent City Flat Dutch.

This variety has been sold under the name of No. 1. It is the most uniform heading cabbage, suitable for this section; heads are large and solid. About two weeks earlier than the Superior Large Late Flat Dutch. Recommend the same highly.

Improved Early Summer.

This variety is deservedly popular with the market gardeners. It forms large, solid, round, flattened, compact heads of excellent quality. The heads average more than double the size of the Jersey Wakefield, while it matures only ten to twelve days later. The leaves turn into the heads so completely that about 9,000 plants may be set in an acre, making a very profitable crop.

Fotler's Short Stem Brunswick.

A rapid grower; large, solid heads and few outside leaves; planted early it is ready for use in July; planted late it is a choice winter sort.

Cauliflower.

FOR PRICE LIST SEE RED PAGES IN BACK OF BOOK.

Choufleur (Fr.), Blumenkohl (Ger.), Coliflor (Sp.), Cavalo Fiore (Ital.)

CULTURE. This is one of the finest vegetables grown, and succeeds well in the South, especially in the vicinity of New Orleans. Large quantities are raised on the sea coast in the neighborhood of Barataria Bay. The two Italian varieties are of excellent quality, growing to a large size, and are considered harder than the German and French kinds. The ground for planting Cauliflower should be very rich. They thrive best in rich, sandy soil, and require plenty of moisture during the formation of the head. The Italian varieties should be sown from April to July, the latter month and June is the best time to sow the Early Giant. During August, September and October, the Le Normands, Half Early Paris and Erfurt can be sown, but in this section the Algiers has the preference. The Half Early Paris is very popular, but the other varieties are just as good. For spring crop the Italian kinds do not answer, but the early French and German varieties can be sown at the end of December and during January, in a bed protected from frost, and may be transplanted into the open ground during February and as late as March. If we have a favorable season, and not too dry, they will be very fine, but if the heat sets in soon, the flowers will not attain the same size as those obtained from seeds sown in fall, and which head during December and January.

Stowell's Evergreer, a Standard Sugar Corn.

Large Algiers Cauliflower.

Early Snowball. A fine variety, great favorite and standard throughout the country; very early, close growing, of compact habit. It is without doubt one of the most satisfactory early varieties. The heads are large. For early or late planting, for the family or the market garden this variety can be depended upon for excellent results.

Large Algiers. A French variety of the same season as the Le Normands. It is one of the best kinds, and has taken the place of other second early varieties since it has been introduced.

Half Early Paris. The most popular of early varieties. Heads good size, white and compact.

Early Italian Giant.

Early Italian Giant. Very large fine sort, not quite so late as the Late Italian and almost as large. The heads are quite large, white and compact, and of delicious flavor. We recommend it to all who have not tried it. When sown at the proper season, it will head with certainty and will not fail to give satisfaction.

Extra Early Paris. Reliable early variety. Good for forcing; produces a good head; dwarf habit; solid, pure white curd of superior quality. Should be planted very early.

Le Normands Short Stemmed Cauliflower.

Le Normands. Is a French variety, and largely cultivated. It stands more dry weather than the other varieties, and has large and pure white heads.

Late Italian Giant. This is the largest of all Cauliflowers, and grown to considerable extent in the South. It is very large and compact; should not be sown later than June, as it takes from seven to nine months before it heads.

Early Dwarf Erfurt.

Early Dwarf Erfurt. This variety is of more dwarfish growth than Late Italian Giant. Heads white and of good size. Heads with certainty.

Carrots.

FOR PRICE LIST SEE RED PAGES IN BACK OF BOOK.

Carrotte (Fr.), Moehre or Gelbe Rube (Ger.), Zanahoria (Sp.), Carota (Ital.)

CULTURE. Requires a sandy loam, well manured the previous year; and deeply spaded up. Should be sown in drills ten to twelve inches apart, so the plants can be worked after they are up. Gardeners here generally sow them broadcast, and often the roots are small from being crowded too much together.

Early Scarlet Horn.

Half Long Scarlet French

Half Long Scarlet French. This is the most popular variety, and extensively grown for the market as well as for family use. It is a little later than the Early Horn, much larger, bright scarlet in color and of fine flavor.

Danver's Intermediate. An intermediate American kind. It is of a bright orange color; very smooth, symmetrically formed, somewhat stump-rooted like the Half Long Luc. It will produce more in weight to the acre than any other Half Long variety.

Oxheart or Guerande. This is an entirely distinct variety and deserving of general cultivation. It grows three to four inches in diameter, is early, nearly oval in shape, and the quality is all that can be desired.

Chantenay Half Long. A Half Long scarlet variety, similar to the Half Long Luc, but thicker.

St. Valerie.

Danver's Intermediate.

Long Red without core.

Half Long Luc.

Creole. This carrot was originally the Half Long French variety, but grown in Louisiana a number of years it partakes of the color of the Half Long French, but grows considerably longer. This carrot can be planted at the time of year when Northern or French varieties cannot be planted; for instance, in very early Spring or late Fall. We highly recommend this variety of Carrots.

Half Long Luc. An excellent variety from France. It is as early as any previously mentioned, but stump-rooted and larger. Very smooth and of a fine color.

St. Valerie or Three-Quarter Long. Also a French variety, bright red in color, a little larger and longer than the Half Long French, and stronger in the leaves. This is one of the finest carrots. It is very smooth.

Early Scarlet Horn A short stump-rooted variety of medium size, very early and of fine flavor.

Improved Long Orange. This is an old variety; roots long and of deep orange color. The flavor is not so fine as that of the preceding kind. Valuable for field culture.

Long Red, without core. A variety from France, which is of cylindrical shape, very smooth, bright scarlet color, and of fine flavor, has no heart or core. It is not quite so early as the Half Long, but more productive. Consider it a first-class variety for the table, and should be more cultivated.

Celery.

FOR PRICE LIST SEE RED PAGES IN BACK OF BOOK.

Celeri (Fr.), Sellerie (Ger.), Apio (Sp.), Sedano (Ital.)

CULTURE. Sow in May and in June for early transplanting, and in August and September for a later crop. Sow thinly and shade during the hot months. When the plants are six inches high, transplant into trenches about four inches deep, nine wide and two and a half feet apart, made very rich by digging in rotted manure. Plants should be from 6 to 8 inches apart. When planted out during

Flowering Annuals to be Had in their Planting Season.

the hot months, the trenches require to be shaded, which is generally done by spreading cotton cloth over them, lataniers will answer the same purpose. Celery requires plenty of moisture, and watering with soap-suds, or liquid manure, will benefit the plants a great deal. When tall enough, it should be earthed up to blanch to make it fit for the table, which can be commenced with when the plants are a foot high. Best not to earth up too high at first, only when the final or last hilling up is made.

Celeriac or Turnip-rooted.

Celeriac or Turnip-rooted. Is very popular in some parts of Europe, and should be more cultivated here. It should be sown in the fall of the year, and transplanted six inches apart. When the roots have obtained a good size, they are boiled, scraped off, sliced and dressed with vinegar, etc., as a salad.

Golden Self-Blanching.

Perfection Heartwell.

Dwarf Large, Ribbed.

This kind was brought here some years ago from France. It is short but very thick ribbed, solid and of fine flavor. The best dwarf variety.

Golden Self-Blanching.

A French variety, of the best quality. The heart is solid, very tender, of a beautiful yellow color, the ribs brittle and of a delicious flavor. Cannot be too highly recommended.

Giant Pascal. This is a selection from the Golden Self-Blanching Celery, it partakes of the best qualities of that variety, but it is a much larger and better keeper. It is of a fine nutty flavor, grows about two feet high; the stalks are very broad, thick and crisp, entirely stringless; the width and thickness of the stalks are distinct features of this kind. It bleaches with but little "earthing up" and very quickly, usually in five or six days.

Large White Plume.

A handsome thick ribbed variety, of yellowish white color and very crisp.

and tender. It is easily bleached, requiring but little earthing up, as the stalk, portions of the inner leaves and heart are white naturally. The originator claims that up to but a few years ago this variety has always had a tendency to revert to the old green type, and it has always produced a proportion of green plants, but preserving selection for years enables them now to produce an almost absolutely pure stock far superior to any that has ever been offered.

Perfection Heartwell. This variety is in size between the Large White Solid and Dwarf kinds; it is of excellent quality, very thick, and when blanched the heart is of a beautiful golden yellow color; preferable to the White solid, and one of the best kinds ever introduced.

Large White Solid. Tall, large sized, very solid and pure white. It is crisp, but not as fine flavored as the foregoing kinds. It is used extensively for garnishing.

Celery for Soup. This is sown in the spring of the year, broadcast, to be used for seasoning the same as Parsley.

Chervil.

FOR PRICE LIST SEE RED PAGES IN BACK OF BOOK.

Cerfeuil (Fr.), Kerbelkraut (Ger.), Perifolio (Sp.), Cerfoglio (Ital.)

An aromatic plant, used a good deal for seasoning, especially in oyster soup, and is often cut between Lettuce when served as a salad. In the North this vegetable is very little known, but in this section there is hardly a garden where it is not found. Sow broadcast during fall for winter and spring, and in January and February for summer use.

Giant Pascal.

Collards.

FOR PRICE LIST SEE RED PAGES IN BACK OF BOOK.

Blatterkohl (Ger.), Chou Cora (Fr.), Cabu (Sp.)

A kind of Cabbage which does not head, but the leaves are used the same as other Cabbage, and is very popular in the South.

Collards.

Corn Salad.

FOR PRICE LIST SEE RED PAGES IN BACK OF BOOK.

Mache Douchet (Fr.), Acker Salat (Ger.), Canonigas (Sp.), Valeriana (Ital.)

Broad-leaved Corn Salad is the variety generally cultivated. It is used as a salad during the winter and early spring months. Should be sown broadcast or in drill 9 inches apart during fall and winter.

Corn==Indian.

FOR PRICE LIST SEE RED PAGES IN BACK OF BOOK.

Mais (Fr.), Welschkorn (Ger.), Maiz (Sp.), Mais (Ital.)

CULTURE. Plant in hills about three feet apart, drop four or five seeds and thin out to two or three. When the ground is strong the Adams' Extra Early and Crosby's Sugar can be planted in hills two and a half feet apart, as these two varieties are more dwarfish than the other kinds. Plant for a succession from February to June.

Trisler's Strawberry. The name tells its color. The ears run from pure white to deep red, but make a pure white meal. It has been planted in Louisiana since 1870 by one progressive farmer. While it has

never been put on the market, the following is what he claims for it: "I have been planting this corn since 1870, and made 70 bushels per acre this year without any fertilizing. This is the largest yielding corn that I have ever planted. If the season is fa-

We are Headquarters for Field Peas in their Season.

vorable, it will be ready to gather and house in 150 days, if there is drouth 180 days. It will stand more wet and dry weather than any variety. The stalks are large, well rooted and hard to blow down. Will make two ears per stalk if given distance, say 3 feet in drill, and grows 8 to 9 feet high. It is very popular on account of its large yield, and one of its principal features is that it is weevil proof."

Champion White Pearl.

Champion White Pearl. This is a very handsome white corn. The grain is pure white, exceedingly heavy and long, top of which will span the cob, which is small. Being medium in size of stalk it can be planted much thicker than a large corn, and at the same time bear a full sized ear. The originator has established in Champion White Pearl Corn a short, thick stalk, with the ear growing low upon it, which is an advantage in stormy weather. Planted a good deal for the market.

Adams' Extra Early. The earliest kind, but ears are small and not as desirable as the Adams' Early, which follows this variety closely in maturity.

First in the Market Sugar. A new variety of Sugar Corn which we claim to be the earliest in the market. It is fully two weeks earlier than Extra Early Crosby and nearly a week earlier than any Corn. It is a good producer, more prolific than Extra Early Crosby's, the ears are somewhat larger and the kernel of a pale, pinkish color, some of the ears run entirely white, while others again are of a deep pink. The stalks grow larger than the Crosby's, almost as tall as Stowell's Evergreen, and produce two ears each. We consider this variety one of the best of all the Sugar Corns, owing to its earliness, and we would recommend it to all, either for market or family use.

Ne Plus Ultra or Shoe Peg Sugar. Is some three to five days earlier than Country Gentleman Corn, which is as late as Stowell's Evergreen. It has very small cob, long grain, shape of shoe pegs. It is very sweet and tender and largely used by market men in the large cities of this country.

Frotscher's Adams' Early Large. This is almost exclusively planted for the first roasting ears by the market gardeners. The ears are of good size, but otherwise for the table only same as common corn. Strange to say, the gardeners do not

plant any sugar corn for the market. We sell hundreds of bushels of St. Charles and other varieties of field corn to be planted for the market, to be sold green.

Snowflake White Dent. Large ear, large cob; very rank and strong growth—good in all that makes up a big white corn.

Country Gentleman. A remarkably satisfactory and delicious corn for family use. The ears are good sized and produced in great abundance, many stalks bearing four plump ears. Its long, small, milky kernels are full of sweetness, and as the cob is small, and the corn white and tender, it is sure to please.

Steckler's French Market.

Steckler's French Market. A white variety about one week later than Large Adams; it comes between Large Adams and White St. Charles; well filled large ear. Recommended highly for family use, and used largely by market gardeners.

Blunt's Prolific Field. This is a very excellent variety, either for field or the table, it is very prolific, producing from four to six ears of corn. They are medium size, but well filled and heavy. It is second early. We recommend it as an early yielding corn for field culture.

Large White Flint. A very popular variety with gardeners and amateurs. It is planted for table use principally.

When You Get It from Steckler Its Good.

Stowell's Evergreen Sugar.

Stowell's Evergreen Sugar.

This is the best of all Sugar Corn. It is early, the ears are of large size and are well filled. It remains green longer than any other variety, and is quite productive. The cultivation of this excellent cereal, as well as all other Sugar Corn, is much neglected, yet why people will plant common field corn for table use considering size instead of quality, we cannot understand.

Hickory King.

Hickory King. This field corn has come into general cultivation. It has proven itself all that is claimed for it and is the largest grained and smallest cobbled pure white dent corn in the world. It is early the ears are from 7 to 9 inches in length, and are generally borne from 3 to 5 on a stalk, making it very productive. The ears are well covered by shucks, a great consideration in field corn planted in the South.

Improved Leaming. A very popular and extremely productive variety. On good land the stalks grow tall, producing two good ears to each stalk. The ears are long, with small red cob well filled with grains of medium size, of a rich golden color. Extensively grown by sugar planters for first feed, making a good crop even in dry seasons, by reason of its strong vigorous growth. Stalks are leafy, making excellent fodder, while the grains being so deep, yield an extra large quantity of shelled corn per bushel of ears.

the Pearl, for seed purposes or candy manufacturing.

White Rockdale Corn.

White Rockdale. A Southern variety has been planted quite extensively and has proven everything that was claimed for it. It is the best Southern White Corn in cultivation, flintier than the Mosby's Prolific; moderately early; cob small, grain deeply dented, of pure white color and makes excellent meal. We recommend same highly; any one using this corn will not be disappointed.

Pop Corn. Is one of the smallest varieties of kernels or seeds, cultivated same as field or garden corn, but drilled instead of hills. Very extensively used for pop corn candy, we handle the best two varieties known, the Rice and

Improved Leaming.

Use Raffia for Budding, Tying, Etc., Cheaper than Twine and lasts Louger.

Golden Beauty. This is the handsomest of all yellow corn; the ears are of a perfect shape, long, and filled out to the end of the cob. The grains are not of a flinty type, neither are they so soft as to be greatly shriveled, as in the Golden Dent. Golden Beauty matures early, ripening in eighty days from planting, and surpasses all in size and beauty of grain.

Mosby's Prolific. This is a Southern corn, and is recommended for general crop. The originator of this variety says: "This corn is a cross between two widely different varieties. It is purely white, small cob, deep full grain, neither too hard nor too soft, and stands crowding in the drill as close again as any other kind. Ears of medium size, but long. It stands drouth better than ordinary corn." Should be planted early.

Mexican June. This is a valuable addition to our large and selected list of field corn, best adapted for the South. has been thoroughly tested in the past and has proven all that was claimed for it. It is the best late corn yet introduced. It is a strong, robust grower, sending the roots deep into the soil. Stands heat and drouth well. Ears large, small grain and well covered with shucks. We recommend same highly. Should be planted in succession from middle of April to end of August.

Extra Early Crosby's Dwarf Sugar. This is a very tender variety and of excellent quality. Ears small, but very sweet. It is not so extensively planted as it deserves to be.

Iowa Silver Mine. Large ear, white dent, long grain. small cob, 110 day corn. Fine yielder of splendid merit.

Improved Yellow Creole. Produces well with little cultivation, is not affected by drought or by excessive rains; is not injured by climbing wet vines at time of its maturity; resists the attacks of the birds in the field. Long yellow ears, filled to the end, large grains, tapering cob, close fitting covering of long tough shucks; generally two or more ears, growing high upon a tall firm stalk. Will yield, in fit condition for storing, almost every ear that buds in the spring.

Golden Dent Gourd Seed. This is now the standard variety in many corn growing sections. Ears average nine to ten inches long, tapering slightly toward tip, are about six inches in circumference, contain 16 to 20 rows and are remarkably uniform. Kernels light yellow, deeply dented, and well placed on cob of medium size. Matures in 80 to 90 days.

Bushnell's Gate Post Field Corn. This is deep grain, yellow color, medium early and a wonderful yielder. Recently 100 pounds of ears shelled 90 pounds of corn, one of the handsomest corns ever grown, recommended for field culture.

White St. Charles. Our city gardeners' favorite variety. It makes a vigorous stalk, ears are as large as the Champion White Pearl and well filled, small red cob. It is the best all round field corn, and always gives satisfaction.

Early Yellow Canada. A long, eight-rowed variety, very early, and is planted in both field and garden. It does well.

Early Sugar or New England. A long eight-rowed variety, which succeeds the Extra Early sorts. Desirable kind.

Best of All. This white corn is the most profitable variety yet introduced. It is a week later than the Large Adams, but the ears are large, nearly double the size of Adams, therefore the lateness of bearing is offset by its extra large size, a quality that is demanded by all our truckers and gardeners. We recommend it very highly.

Mexican June. Early Sugar or New England Best of All.

Cress.

FOR PRICE LIST SEE RED PAGES IN BACK OF BOOK.
Cresson (Fr.), Kresse (Ger.), Berro (Sp.), Agretto (Ital.)

CULTURE. Used for salad during the winter and spring. Sow broadcast or in drill six inches apart.

Curled or Pepper Grass. A popular salad which should be sown early in the spring at short intervals, for succession, as it soon runs to seed.

Broad-Leaved. This variety is extensively cultivated for the market. It is sown from early fall to late spring. The leaves resemble Water Cress. It is considered a very wholesome dish.

Water Cress. We have succeeded in obtaining and are controlling the output of Water Cress plants and seeds.

Steckler's French Market Corn is a Favorite.

Cucumber.

FOR PRICE LIST SEE RED PAGES IN BACK OF BOOK.

Concombre (Fr.), Gurke (Ger.), Pepino (Sp.), Cetriolo (Ital.)

CULTURE. Cucumbers need a rich soil. Plant in hills from three to four feet apart; the hills should be made rich with well decomposed manure, and eight to ten seeds should be planted to each hill, and covered about one-half inch deep; when well up thin out to four plants in the hill till the vines meet. When the spring is dry the plants have to be watered, else they do not keep in bearing long. They can be planted from March till July. A great many Cucumbers are planted here in February, or even sooner, and are protected by small boxes or dirt bands with a pane of glass on top. These boxes are removed during the day and put back in the evening. When days are cloudy and cold the plants are kept covered.

Arlington White Spine. Very regular in outline, uniform in size, averaging seven to eight inches in length, straight and of a rich dark green color. Flesh white, crisp and solid, with comparatively few seeds. Vines of vigorous growth and very productive.

Long Green Turkey. A long variety, attaining a length of from 15 to 18 inches when well grown. Very fine and productive.

Japanese Climbing. The vines are extra strong, and foliage more vigorous than other kinds. Being of a climbing habit it can be grown on trellises, etc. Fruit

Japanese Climbing.

is round, about 10 inches long, thick, of fine flavor. It is very prolific, from forty to fifty cucumbers growing on a single plant.

Early Frame. Desirable for producing pickles of medium size and of fine quality when sliced for the table.

Early Frame.

Arlington White Spine.

Klondyke. An attractive dark green cucumber, averaging 6 to 7 inches long and 2 inches thick; of unsurpassed quality. Its points of superiority are, extreme earliness, a prolific bearer, very hardy; size just right for a slicing cucumber. An excellent pickling sort.

Frotscher's New Orleans Market. This is a variety selected from an imported forcing Cucumber, introduced by Richard Frotscher. It is good for forcing or open ground, very productive, keeps its green color and has few vines. This kind cannot be excelled for shipping, as it produces very perfect cucumbers and but few culls; the largest growers of cucumbers for shipping about here plant none but this variety. It is quite different from the Long White Spine offered by some. The best in and outdoor cucumber yet introduced.

Frotscher's New Orleans Market.

Davis Perfect.

Davis Perfect. Unequalled for quality, shape, color, productive-ness and shipping qualities. Color, a dark, glossy green; shape, slim and symmetrical, with an average length of ten to twelve inches. They never grow puffy and hold their color until nearly ripe, when they turn white without a sign of a yellow streak on them. The quality is fine, as the seeds are soft when the cucumber is fit for table use, is very tender and brittle and of exceptionally good flavor. Another point of merit is its splendid shipping qualities. It holds its color and brittleness long after being cut, and on account of its being a strong grower it is able to resist the cucumber disease which works destruction among so many of the best forcing varieties.

Henderson Perfected White

Spine. The finest for slicing. Cucumber perfection has been attained in this grand improvement in the White Spine family. It is an early, prolific and continuous producer of uniformly large and symmetrical fruits of an intensely rich, deep green color, faintly marked with light yellowish shading towards the tip. It runs very close to type, bearing practically no misshapen fruit or culls. It is the ideal for slicing—flesh being compact, fine grained, sparkling white and of most refreshing and delightful flavor. The vines are vigorous, quite healthy, mildew-proof, maintaining their fresh luxuriance and bearing from the earliest to the latest season. Either for the home garden or for market this variety is without a peer.

Improved Early White Spine.

This is a popular variety. It is of medium size, light green, covered with white spines. A good kind for shipping. It is used by market gardeners for forcing as well as outdoor culture and is very productive.

Improved Early White Spine.

West India Gherkin.

West India Gherkin, or Burr, is extensively grown for pickling; it is the smallest of all varieties, and should be picked while young and tender and put in salt water until required for pickling.

Early Cluster. Early, short and prickly; it bears in clusters. Principally cultivated for pickling.

Early Cluster.

Early Fortune. Decidedly an acquisition because of its deep green color which it retains unchanged for a week after picking, thus fitting it for shipping long distances. In size it is larger and slimmer than White Spine. The fruit is cylindrical, smooth, free from wart, and bears brown spines.

Egg Plant.

FOR PRICE LIST SEE RED PAGES IN BACK OF BOOK.

Aubergine (Fr.), Eierpflanze (Ger.), Berengena (Sp.), Petonciana Meanena (Ital.)

CULTURE. The seed should be sown in hot beds in the early part of January. When a couple of inches high they should be transplanted into another frame, so that the plants may become stronger and robust. When warm enough, generally during March, the plants can be planted in the open ground, about two and a half feet apart. This vegetable is very profitable in the South, and extensively cultivated.

New Orleans Market.

Large Purple or New Orleans Market. This is the kind mainly grown here, is large, oval in shape and of a dark purple color and very productive. Southern grown seed of this, as a good many tropical or sub-tropical

vegetables, is preferable to Northern seed, as it will germinate more readily, and the plant will last longer during the hot season. It is the best variety for shipping, superior to the Northern raised kinds. It carries better. The cut is made from three specimens, and represents the true form.

Steckler's New High Bush.

Similar to the New York Improved, except that it grows with a longer stem and the fruit is borne on its stem rather than out on the branches, as with other varieties.

Early Dwarf Oval.

Early Dwarf Oval. This variety is very early and productive; the fruit is not so large as the New Orleans Market but equal in flavor.

Early White Pearl. The plant is a large, vigorous grower and comparatively free from thorns. Fruit pure creamy white, with slight shading of a very light green near the stem, beautiful in shape, resembling somewhat the purple variety. In eating quality it is delicious, fine grain and well flavored.

New York Market.

The New York Market. Is rounder in shape than the New Orleans, has spines on leaves and stems.

Endive.

FOR PRICE LIST SEE RED PAGES IN BACK OF BOOK.

Chicoree (Fr.), Endivien (Ger.), Endibia (Sp.), Indivia (Ital.)

CULTURE.

A salad plant which is very popular and much cultivated for the market. Principally for summer use. It can be sown in drills a foot apart and when the plants are well up, thinned out till about eight inches apart. Or it

Green Curled.

can be sown broadcast thinly and transplanted the same as Lettuce. When the leaves are large enough, say about eight inches long, tie them up for blanching, to make them fit for table. This can only be done in dry weather, otherwise the leaves are apt to rot. For summer use do not sow before the end of March, as if sown sooner, the plants will run into seed very early. Sow for a succession during the spring and summer months. For winter use sow in September and October.

Green Curled. The most popular variety producing beautifully curled dark green leaves, crisp, tender, and blanches cream white.

Broad-Leaved or Escarolle.

Makes a fine salad when well grown and blanchd especially for summer.

Garlic.

FOR PRICE LIST SEE RED PAGES IN BACK OF BOOK.

Ail (Fr.), Knoblauch (Ger.) Ajo (Sp.), Aglio (Ital.)

CULTURE.

There is more garlic grown in Louisiana than in any other State or in all States together. It is a staple product of the lower parishes, and is raised for home consumption and shipping. It is used for flavoring stews, roasts and various other dishes. People from the south of Europe use much more than the inhabitants of the United States. It should be planted in October and November, in drills two to three feet apart, about 6 inches in the drills and 1 inch deep. The distance between rows depends upon the mode of cultivation, if planted in the garden, a foot between the rows is sufficient. It is cultivated like Onions in the spring they are taken up and platted together

Garlic.

in a string by the tops. One of these strings contains from fifty to sixty heads in double rows; they are then stored or rather hung up in a dry, airy place, and will keep from six to eight months.

Early White Vienna Kohlrabi.

Kohlrabi or Turnip-Rooted Cabbage.

FOR PRICE LIST SEE RED PAGES IN BACK OF BOOK.

Chou Navet (Fr.), Kohlrabi (Ger.), Col de Nabo (Sp.)
Cavalo Rapo (Ital.)

CULTURE. This vegetable is very popular with the European population of our city, and largely cultivated here. It is used for soups, or prepared in the same manner as Cauliflower. For late fall and winter use it should be sown from the end of July till the middle of October, for spring use, during January and February. When the young plants are one month old transplant them in rows one foot apart, and about the same distance in the rows. They also grow finely if sown broadcast and thinned out when young, so that the plants are not too crowded, or, they may be sown in drills, and cultivated the same as Ruta Bagas.

Early White Vienna.

The finest variety of all, and the only kind we sell. It is early, forms a smooth bulb, and has few small leaves. The so-called large White or Green is not desirable.

Large London Flag

Leek.

FOR PRICE LIST SEE RED PAGES IN BACK OF BOOK.

Poireau (Fr.), Lauch (Ger.), Puero (Sp.), Poro (Ital.)

CULTURE. A species of Onion highly esteemed for flavoring soups. Should be sown broadcast and transplanted, when about six to eight inches high, into rows a foot apart, and six inches apart in the rows. Should be planted at least four inches deep. They require to be well cultivated in order to secure large roots. Sow in October for winter and spring use, and January and February for summer.

Large Rouen. A French variety introduced here some years ago, which does well in our climate and seems to be particularly adapted to our soil. It grows shorter than either London Flag or the Carentan and much stouter than either of them. As a market variety it cannot be excelled.

Large London Flag. Is the kind most generally grown.

Large Carentan. This is a French variety which grows to a very large size.

Lettuce.

FOR PRICE LIST SEE RED PAGES IN BACK OF BOOK.

Laitue (Fr.), Lattich (Ger.), Lechuga (Sp.), Lattuga (Ital.)

CULTURE. Lettuce is sown here during the whole year by the market gardeners. Of course it takes a great deal of labor to produce this vegetable during our hot months. For directions how to sprout the seed during that time, see "Work for June." The richer and better the ground the larger the head will be. No finer Lettuce is grown anywhere else than in New Orleans during fall and spring. The seed should be sown broadcast, when large enough, plant out in rows a foot apart, and from eight to ten in the row in rows. Some kinds grow larger than others, for instance, Butter Head will not require as much space as Drumhead or Perpignan.

May King. This remarkable new cabbage Lettuce has proved itself capable of satisfying the most exacting requirements that could be made of an early outdoor Lettuce. It is also an excellent variety for forcing. It is not in the least affected by cold or wet weather, grows very

quickly and produces splendid globular heads, which are ready 10 to 14 days in advance of any other, and which stand a long time before running to seed. The outer leaves are of a yellowish green, with light brownish tinge, while the inner leaves are of a golden yellow shade. Flavor unexcelled.

New Orleans Market Cucumber Should be Planted Before any Other.

Frotscher's New Orleans Improved Large Passion.

This is a Cabbage Lettuce introduced by Richard Frotscher from California; it attains a large size; grows slowly, but heads very hard. It does better here during late autumn and winter than in summer, as it cannot stand the heat. If sown late in the fall and transplanted during winter, it grows to very large heads, hard and firm. This is the kind shipped from here in the spring and cannot be surpassed for that purpose.

Hubbard Market. A large cabbage variety; for forcing or open ground.

Improved Large Passion.

A popular variety among market gardeners, medium size cabbage, butter heading sort.

Paris White Coss.

Paris White Coss, Romaine, or Celery.

This variety grows strong and upright, producing long leaves, which should be tied up and blanched before cutting, which makes them very crisp and tender. They are quite hardy, and will force well. They are the most popular variety in France and England, where they are frequently served without dressing and simply eaten like celery, with salt.

Improved Royal Cabbage.

Improved Royal Cabbage.

Heads light green, of large size, about two weeks later than the White Butter. It is tender and crisp.

California. Very large; solid heads; inside very white.

Large Salamander. A desirable variety for Summer or Fall use, forming very large, compact and beautiful heads. Color light green; stands both heat and drought remarkably well, very highly recommended; it is undoubtedly the best summer variety, the heads will frequently weigh from 2 to 3 lbs. each.

Trocadero.

Trocadero. A Cabbage Lettuce from France, it is of light green color, forming a large solid head, resembling the New Orleans Improved Passion Lettuce somewhat in appearance; however, the leaves are thinner.

Drumhead Cabbage.

Drumhead Cabbage. An excellent spring variety, forming large heads, the outer leaves curled.

Best of all Beans, we know of no better for all purposes.

Perpignan.

Perpignan. A fine German variety, which forms large, light green heads, and which stands the heat. It is much cultivated for the market, as it thrives well when sown during the latter part of spring.

Brown Dutch Cabbage. A very hard kind, forms a solid head; good for winter.

Early Cabbage or White Butter.

Early Cabbage or White Butter.

An early variety, forming a solid head, but not quite so large as some others. It is the best kind for family use, to sow during fall and early spring, as it is very early and of good flavor.

Steckler's French Market.

Steckler's French Market.

This Lettuce is a great improvement on the old and well known Royal strain, forming much larger and more compact heads. Is very crisp, tender, and olive green in color.

Grand Rapids. This superb lettuce is especially adapted for greenhouse culture in winter; also a good lettuce to sow outside early in the spring for family use. Very beautiful in appearance. Of rapid, upright growth, and may therefore be planted quite close; not liable to rot; retains its freshness a long time after being cut, hence much sought after by dealers and shippers. Quality the best.

Big Boston. A fine large heading forcing sort, and succeeds well in cold frames during winter. The plants are very hardy and vigorous. When well grown the heads are beautifully blanching and quite tender. Popular as a winter lettuce for shipping.

Melon==Musk or Canteloupe.

FOR PRICE LIST SEE RED PAGES IN BACK OF BOOK.

Melon (Fr.), Melone (Ger.), Melon (Sp.), Popone (Ital.)

CULTURE. Melons require a rich sandy loam. If the ground is not rich enough a couple of shovels full of rotted manure should be mixed into each hill, which ought to be from five to six feet apart; drop ten or twelve seeds, and when the plants have two or three rough leaves, thin out to three or four plants. Canteloupes are cultivated very extensively in the neighborhood of New Orleans; the quality is very fine and far superior to those raised in the North. Some gardeners plant during February and cover with boxes, the same as described for Cucumbers. When Melons are ripening, too much rain will impair the flavor of the fruit.

Texas Cannon Ball. This melon is as round as a ball, of medium size, 6 to 8 inches in diameter and heavily netted. Flesh light green, melting and highly flavored. Remarkably solid with extremely small seed cavity. Very prolific, continuing bearing for a long time.

Hoodoo. This melon is of recent introduction. It is the same size through from top to bottom as the Rocky Ford Canteloupe. It is slightly flattened from stem to blossom end. The netting is well developed and covers the ribs completely. The space between the ribs is not netted but is quite narrow. The rind is tough. Melon salmon colored and grained the same as the Rocky Ford Canteloupe. The flavor is pleasant.

Early White Japan. An early kind, of creamish white color, very sweet and medium size.

Netted Nutmeg. Small oval melon, roughly netted, early, and of fine flavor.

Netted Citron. This variety is larger than the foregoing kind; it is more rounded in shape, of medium size and roughly netted.

Rocky Ford. Undoubtedly the best extra early, small, round, green fleshed melon in cultivation, nearly perfect globe in shape. Remarkably uniform in size, weighing from 1½ to 1¾ pounds. Very thick meat with thin rind. Skin green and heavily ribbed flesh, light green in color, melting and uniform, of a very delicious flavor. Very prolific and early in ripening.

Early Hackensack. A very popular variety which attains a large size, is round in shape and flattened at the ends; skin green and thickly netted; the flesh also is green, rich and sugary in flavor. It is very productive, and extensively grown by market gardeners.

Pine Apple. A medium sized early variety, oval in shape, and of fine flavor.

Frotscher's New Orleans Market.

Frotscher's New Orleans Market. A large species of the citron kind, extensively grown for this market. It is very roughly netted and of luscious flavor; different altogether from the Northern Netted Citron, which is earlier but not so fine in flavor, and not half the size of the variety grown here. The New Orleans Market cannot be excelled by any other variety in the world. In a favorable season it is a perfect gem. It has been tried alongside of varieties praised in the North, such as are brought out every year, but none of them could compare with the New Orleans Market. If the best and earliest specimens are selected for seed, in three or four years the fruit will be large and fine.

Paul Rose. This splendid melon is one of the very best varieties for either home use or the market that has been introduced for many years. It has a firmness of rind and structure of flesh peculiarly its own, superior in this respect to any other melon in existence, surpassing all other varieties as a shipper and a long keeper, has a very small seed cavity, deep orange colored flesh, and is of very uniform shape, average diameter of about five inches.

Osage. This variety has secured a quick and wonderful reputation from its peculiar luscious, spicy flavor and good shipping qualities. It is of egg shape, skin very thin, of dark green color, and slightly netted; the flesh is of salmon color, remarkably sweet, and a great point of merit is, that no matter what size the melons are, they are always sweet and delicious. It is very productive, a good keeper, and will stand shipping better than any other sort.

Persian or Cassaba. A great acquisition, and destined to become a standard vegetable just as much so as potatoes or onions. The seed should be sown late in the spring, after all danger of frost is over on moist sandy loam. Do not pick until the light streaks become quite yellow. Stow away so they do not touch each other in a cool, dark place. When the rind becomes slightly softened and moist they are ready to eat. Some of the melons will actually keep until February. The seed cavity is small and the flesh thick, of fine texture and juicy and palatable to within one-quarter inch of the skin. The flavor is delicious—almost impossible to describe to do it full justice. There is a decided flavor of pineapple as well as the best known mild musk melon. It is an oblong fruit about twelve inches long; the skin is smooth and mottled dark green and yellow.

Preserving Citron. This fruit resembles water melon, of a light green color, which is coated over with a white substance like flour, that is easily rubbed off. It is used for preserving and making pies and sauces.

Long Island Beauty. This is one of the best shipping varieties, is very early, of good size, green flesh, roughly netted, and of luscious flavor. Besides being the most beautiful it is also earliest of all.

Tip Top. This splendid melon has "held its own" during the past dozen years or more with all introductions in the melon line, and no melon of which we have any knowledge compares with it in uniformly good eating qualities. The testimony of all who have used Tip Top is that

Osage.

every melon produced, whether big or little, early or late, is a good one; sweet, juicy, finest flavor, firm (but not hard) fleshed, and eatable to the outside coating. Its appearance on the market is very attractive—sells on sight.

Emerald Gem. A medium size melon which originated in Michigan, is almost round, of good quality, the skin is green and smooth; flesh salmon, fine grained and thick. A good variety.

Melon==Water.

FOR PRICE LIST SEE RED PAGES IN BACK OF BOOK.

Melon d'Eau (Fr.), Wassermelone (Ger.), Sandia (Sp.), Melone d'Aqua (Ital.)

CULTURE. Water Melons will grow and produce in places where Canteloupes will not do well. The soil for this plant must be light and sandy. Plant in hills about eight feet apart, eight to twelve seeds in a hill; when the plants are well up thin out to three. The plants should be hoed often, and the ground between the hills kept clean till the vines touch.

Marie Louise.

Marie Louise. This is one of the finest varieties introduced. It is a cross between the Lone Star and Florida Favorite: shape similar to the latter, but larger, just as early, and far superior than either. Dark striped, thin rind, and flesh red and very succulent, ripening almost to the rind. The seed resembles that of the Lone Star, but is darker in color. We had some of the melons weighing from 20 to 25 pounds. Recommend same highly.

Monte Cristo: A variety unsurpassed for home use or near markets. Vine vigorous and productive. Fruit of medium size, oval; color dark green, often showing fine russeting, flesh very bright, rich red, and exceedingly sweet. This variety is so crisp and tender that it will not stand shipping.

Halbert Honey. Most handsome melons of truly superb quality—the very finest Melon in cultivation for home use or nearby market. It succeeds well and ripens early in all melon-growing sections, and has only the single drawback of a thin, brittle rind which will not withstand shipment on the cars. The vines are of strong, healthy growth and set fruits freely. The melons are of cylindrical oblong form with smoothly rounded ends and free from any tendency to necks at the stem end. The first melons ripen early and the vines continue to develop fine fruits throughout the season, even the late fruits are of the same large size and regular form. The melons are from 18 to 20 inches in length with smooth dark green skin. The beautiful crimson flesh is of such sugary melting consistency that it can only be fully appreciated by actual trial.

Rattle Snake. A large oblong variety, with decided stripes of light and deep green. Rind tough, and is one of the best shipping melons. Flesh bright red and of good quality.

Duke Jones. A Southern Melon of great merit. It is of the same shape as the Kolb Gem, but of much finer flavor and of large size. Rind dark green, red flesh, large and early.

Rattle Snake.

Bradford. This Melon is long in shape and color dark green with darker wavy bands; flesh melting and of excellent flavor. Seed white; a splendid variety.

Early Dark Icing. A very desirable variety. Dark skin, crimson flesh, thin rind, quite solid and of delicious flavor. A fine market sort.

Frotscher's Lone Star.

Frotscher's Lone Star. This Melon was brought here from Texas by Mr. N. Henderson, Iberia Parish, La. It has proven to be the best Melon for this section, either for market or family use. This melon is above medium and very uniform in size, a prolific bearer, oblong in shape; the rind is of mottled green and black color, somewhat like the Rattle Snake, but of a darker green. The flesh is of a deep red color, solid, crisp and very sweet in flavor. It cannot be excelled by any variety. It is one of the leading varieties for the South.

Eden. A splendid new shipping Watermelon extensively planted in the Carolinas, Georgia and Florida. Fifteen hundred acres of Eden were planted at one point in Florida in one season. In general appearance it closely resembles Kolb Gem, but it has light colored seed and a sweetness of flesh almost equal to our Georgia Rattlesnake. This combination of excellent eating and shipping qualities makes it a quick seller at high prices on northern markets. If you grow for shipment the Eden should interest you.

Early Triumph. A favorite market and shipping melon. It is early, prolific, and averages very large. Its fine appearance makes it a ready seller in any market. The rind, like that of the Duke Jones, is of a dark green color, with indistinct stripe, flesh solid and sweet.

Sweet Heart. A shipping Melon of large size and fine quality. The vines are very vigorous and productive, bearing the fruit early. Melons uniform in size, oval-shaped and very heavy. The rind is light green, thin, but firm, flesh bright crimson, sweet and tender. This melon is particularly fine for distant shipping, being of such fine appearance that they sell readily and they remain in fit condition to use longer than any other sort.

Kleckley's Sweet. This is one of the best flavored Melons in cultivation, and of a shape and color that is extremely desirable. The rind is very dark green, very thin, flesh deep scarlet, fine and of delicious quality. For the home market and family garden it is decidedly one of the best.

Cole's Early. A great favorite for a large area of different climates. Fruit medium sized, oblong, striped and mottled. Flesh bright red; solid, and of fine sweet flavor.

Early Triumph.

Ice Cream. (White Seeded). This variety is annually increasing in popularity; it grows to a medium size; nearly oval, of a pale green color, and has a thinner rind than any other variety; flesh is bright crimson, crisp and of delicious flavor.

Plant Tobacco Seed for Your Own Consumption.

Pride of Georgia.

Pride of Georgia. A variety from Georgia, of excellent quality; attains large size when well cultivated. Very good.

McIver's Wonderful. An oblong shaped Melon of uniformly large size, and handsome in appearance. The skin shows broad bands of white, shading into narrower bands of dark green. The quality is very superior, flesh of a soft, pale pink, crisp and free from any stringiness and very juicy. These Melons have a solid heart free from cracks, while the seed rows are close to the rind.

Tom Watson. A new variety; becomes very popular wherever tried and especially with shippers. It is an oblong, solid, dark green melon of large size, red flesh, very tender and delicious. It is the best melon yet offered for shipping and very desirable for home use. Very prolific. You would make no mistake in planting.

Florida's Favorite. It is of oblong size, rind dark with light green stripes, flesh light crimson, very crisp and deliciously sweet, seed rather small and of a light creamy-white color. It is earlier than the Kolb Gem or Rattle Snake.

Florida's Favorite.

When in Doubt Consult Steckler.

Black Diamond. All that could be said of Kolb's Gem as to good shipping qualities can be truthfully stated in a higher degree of the Black Diamond. All the praise of high quality bestowed on the Sweet Heart can be repeated of this Melon, but its prominent point of merit is its extreme size—no melon ever yet pro-

duced anything like so uniformly large fruit, nor approached it in productiveness. Melons weighing from 75 to 90 pounds are frequent. It is the most prolific Water Melon ever planted. Its color is a rich, dark green, almost black. Its symmetrical shape, roundish to bluntly oval, is uniform throughout the field. The vine is extremely vigorous.

Alabama Sweet.

Alabama Sweet. The best Melon grown for shipping. Oblong, very large, dark green, feintly striped, very sweet, entirely stringless; very prolific; we cannot recommend this Melon too highly. Fancy selected Southern grown seed.

Kolb Gem.

Kolb Gem. The well-known shipping variety. The fruit is large, thick, and oval, with flattened ends. Skin striped with light and dark green. Flesh bright red.

Seminole. A very early Melon, oblong in shape, of two colors, some very grey and others light green, resembling the Ice Cream, but larger in size. It is fine flavored and productive.

Mustard.

FOR PRICE LIST SEE RED PAGES IN BACK OF BOOK.

Moutarde (Fr.), Senf (Ger.), Mostaza (Sp.)

CULTURE. This is grown to quite an extent in the Southern States, and is sown broadcast during fall, winter and spring. It may be used the same as Spinach, or boiled with meat as greens. The White or Yellow Seeded is very little cultivated and is used chiefly for medical purposes, or pickling. The large-leaved or curled has black seed, a distinct kind from the Northern or European variety. The seed is raised in Louisiana. It makes very large leaves; cultivated more and more every year.

Large-Leaved Curled. The favorite kind here, sown largely for the market. Leaves are pale green, large and curled or scalloped on the edges.

Black or Brown London. Used for same purposes as the White; the difference being in the color of the seed.

White or Yellow London. This is the common White Mustard of commerce, used both as a salad and for flavoring purposes.

Giant Ostrich Plume. This is a splendid variety for the market gardeners and amateurs, and will surely give satisfaction wherever planted. The leaves are beautifully curled, much more than our regular curled variety, but the same quality.

Chinese Very Large Cabbage-Leaved. A European variety, with light green very large leaves. It has not the same taste as the large-leaved or the large curled, but will stand longer before going to seed.

Nasturtium.

FOR PRICE LIST SEE RED PAGES IN BACK OF BOOK.

Capucine (Fr.), Indianische Kresse (Ger.), Capuchina (Sp.), Nasturtio (Ital.)

CULTURE. Sow early in Spring in good rich ground, the plants should be trained to a trellis or rods, the leaves and flowers are used in salads; the seed-pods are picked while young and pickled. The yellow is the variety for this purpose; the other varieties are cultivated for their beautiful and attractive flowers.

Tall Mixed. This variety is principally used for pickling.

Dwarf Tom Thumb Mixed. These are of various shades of beautiful colors, of dwarf habit, and are very ornamental for the vegetable as well as the flower garden.

Frotscher's Adam's Early Corn is True to Name.

Okra.

FOR PRICE LIST SEE RED PAGES IN BACK OF BOOK.

Gumbo (Fr.), Ocher (Ger.), Quimbombo (Sp.), Ocra (Ital.)

CULTURE. This is a highly esteemed vegetable in the South and no garden, whether small or large, is without it. It is used in making "Gumbo," a dish the Creoles of Louisiana as a salad, and is considered a wholesome dish. Should not be planted before the ground is warm in spring, as the seeds are apt to rot. Sow in drills, which ought to be two to three feet apart, and when up, thin out and leave one or two plants every twelve or fifteen inches.

Tall Growing.

Tall Growing. This is the variety mostly cultivated here. The pods are long, round towards the end and tender, longer than the square podded kind.

White Velvet.

French Market Dwarf Prolific.

French Market Dwarf Prolific.

One of the earliest and most productive of all Okras. It is a cross between the Tall Growing and the Winter Velvet varieties; commencing to bear when 6 inches high, producing a pod at the stem of each leaf, and continues bearing until the plant reaches its maximum height, seven feet. Pods are light green, nearly round and smooth. The cut is an exact reproduct of a single plant. It will supersede all other varieties for market and shipping.

White Velvet. A white variety; dwarf free from ridges and seams, and not prickly to the touch, very prolific and early. We tried this variety thoroughly. It has come up to what is claimed for it. We recommend it to all who have not tried it.

Perkins' Mammoth Long Podded. Very prolific, pods are an intense green in color, of unusual length, 9 to 10 inches, very slim and does not get hard, as is the case with other okras.

Dwarf Green Prolific. This is a distinct variety, very dwarf in growth, but enormously productive, producing pods within an inch or two of the ground and clear to the top.

Onions.

FOR PRICE LIST SEE RED PAGES IN BACK OF BOOK.

Ognon (Fr.), Zwiebel (Ger.), Cebolla (Sp.), Cipollo (Ital.)

CULTURE. The cut on this page represents a well-grown Onion raised from Louisiana or Creole seed. The Onion is one of the most important vegetables planted in this section. Thousands of barrels are annually shipped from here to the West and North. If sown at the proper time, with ordinary cultivation, they will always produce a crop and meet with ready sale. The seed is not a sure crop every year and some years it sells very high.

Louisiana or Red Creole. Has been here for a century—supposed to have been brought here first from the south of Europe, we presume the bulbs produced but few seeds. It is hard to say from what variety this Onion originated; having been planted here for so long it has become a distinct kind. It is not as red as the Wethersfield, and not as light as the Strassburg; in flavor it is similar to the two last named varieties, but much stronger than the Italian kinds. In this latitude the seed should be sown from the 15th of September to about the 10th of October; if sown sooner, a good many will throw up seed stalks, which impairs the keeping quality of the Onion. We sow the seed broadcast, protect the seed beds by spreading green moss over them, which is removed every evening and replaced in the morning. Some gardeners use lataniers for

covering the bed. When the seed is coming up, say in 7 or 9 days, the cover has to be removed entirely; but if the weather is dry the watering has to be continued. They thrive best in loamy soil. Can be planted in the same ground for years, and require no rotation as other crops. When the plants have reached the size of a goose quill, they are transplanted into rows which can be from one to two feet apart, according to the mode of cultivation, and about five or six inches apart in the rows. The ground should be prepared before setting out the plants. We generally shorten the tops and roots. In April the Onion will be ready to be taken up. In sections where it is too cold to sow Onion seed in the fall, the Creole seed can be sown in January and February; in that case they should be sown very thinly in drills, thinned out to a proper stand, and by the end of spring they will produce a good size

Stowell's Evergreen, a Standard Sugar Corn.

Onion. Growers here use very little, if any fertilizers, but it can be used with advantage. For spring sowing we recommend the Bermuda seed. The seed of the Creole Onion, which we offer, is grown for us by experienced Onion growers. No better stock can be found.

Red Bermuda. Genuine seed from the Island of Teneriffe. A very early pale red onion grown extensively in the Bermudas and Southern parts of the United States for early shipping to northern markets. Grown in our climate the bulbs are smaller, but mature early and retain much of the extremely mild, sweet flavor of the imported ones.

Australian Brown. An early and very hardy variety which does especially well in the South. Should be planted early, on low wet grounds to get large bulbs. The skin is thick and the color is a rich brown. Is especially noted as a long keeper, as it keeps well into spring, and much longer than other varieties.

White Bermuda. This variety is of the same shape, size and flavor as the Red Bermuda; the only difference is in the color, which is pure white.

Louisiana or White Creole. Is similar in shape and hardness to Frotcher's Red Creole Onion, but silvery white in color, the veins clear and distinct. Its mild, pleasant flavor and splendid keeping qualities make it a favorite White Onion for shipping.

White Queen. (Italian Onion). This is a medium sized, white variety from Italy, very early and flat; can be sown as late as February, and good sized bulbs will yet be obtained. It is of mild flavor and very fine when boiled and dressed for the table.

Crystal Wax. This variety is the best seen. It is of a pure white and sells on sight. Should

be planted in rich soil; if left exposed to sun after ripening they turn to a greenish color. Excellent for shipping and the finest flavored onion in existence.

Danver's Yellow Globe. Brownish yellow color; bulbs quite flat and of good size; largely grown for sets. In the Southern States they can be planted in Autumn and will continue growing during the entire winter.

Red Wethersfield. This is a beautiful large, handsome globe-shaped red Onion. Earliness, productiveness and keeping qualities. It has perfect form, skin deep purplish-red; flesh purplish white; fine grained, produces enormous Onions.

The Prize Taker. One of the largest Onions, more flat in shape than either Danver's or Wethersfield, and of yellowish red color. Flesh is firm and solid, of a transparent white and of excellent mild flavor.

Onion Sets.

FOR PRICE LIST SEE RED PAGES IN BACK OF BOOK.

CULTURE. Onion Sets, when planted in January and February here in the South, will most always produce fine large bulbs. They should be set out in rows five to six inches apart and about eight or ten inches in the rows. By planting sets you gain about three weeks in earliness of crop, hence it is advisable to plant onion sets instead of seed.

Red Western. Will produce a fairly good onion, but are planted mostly for use in the South as green onions. They do very well in North Louisiana and Mississippi.

Yellow Western. Same as the red sets, only different in color, which is of a pale yellow or brown.

White Western. A fine variety of same quality as the red and yellow sets, but are not as hardy and do not keep as well.

Red Creole. The seed was brought here years ago by the Spaniards, and after continuous planting in Louisiana has become a special variety in itself. It is hardy, productive and of good flavor.

White Creole. Same as foregoing, except color is white.

Shallots.

FOR PRICE LIST SEE RED PAGES IN BACK OF BOOK.

Eshallotte (Fr.), Schallotten (Ger.)

CULTURE. A small-sized Onion which grows in clumps. It is generally grown in the South, and used in its green state for soups, stews, etc. There are two varieties, the red and white; the latter variety is the most popular. In the fall of the year the bulbs are divided and set out in rows a foot apart, and four to six inches in the rows. They grow and multiply very fast, and can be divided during winter and set out again. Late in the spring, when the tops become dry, they have to be taken up, thoroughly dried, and stored in a dry, airy place.

Parsley.

FOR PRICE LIST SEE RED PAGES IN BACK OF BOOK.

Persil (Fr.), Petersilie (Ger.), Perjil (Sp.), Prezzemolo (Ital.)

CULTURE. Sow in rows, in good rich soil; it makes a very good edging for beds or walks. Should the weather be dry, watering will hasten their germination. The Garnishing varieties are decidedly the prettiest for ornamenting a dish, but for seasoning they are all equally as good. The seed will also germinate more freely by soaking it twenty-four hours in water, and mixed with sand before sowing.

Market Gardeners'

Curled. A splendid variety for shipping. The leaves are handsomely curled, dark green in color, and of a very fine flavor. A decided improvement on the regular curled variety. We recommend same very highly.

Double Curled.

The leaves of this variety are curled. It has the same flavor as the other kind, extensively raised for shipping purposes.

Plain Leaved.

This is the hardest variety; foliage very dark green, with plain leaves, having a strong Parsley flavor, and much preferred in French cooking.

Creole Plain.

This Parsley originally comes from the imported French strain, but after being grown in Louisiana for a number of years it has a tendency to grow taller, it is claimed by some gardeners that this Parsley does not go to seed as quickly as the Northern and imported varieties. It can be planted during the months of November, December, January and Feb-

Market Gardeners' Curled.

ruary, also in June or July, and is the best variety for all around purposes.

Improved Garnishing. This is the best kind to ornament a dish; it has the same flavor as the other kinds.

Parsnip.

FOR PRICE LIST SEE RED PAGES IN BACK OF BOOK.

Fanais (Fr.), Pastinake (Ger.), Chirivia (Sp.), Pastinaco (Ital.)

CULTURE. Should be sown in deep, mellow soil, deeply spaded, as the roots are long, in drills twelve to eighteen inches apart, when the plants are three inches high, thin out to three inches apart in rows. Sow from September to November for winter, and January to March for spring and summer crops.

The Hollow Crown or Sugar. Is the kind generally cultivated, it possesses all the good qualities for which other varieties are recommended.

Peas.

FOR PRICE LIST SEE RED PAGES IN BACK OF BOOK.

Pois (Fr.), Erbse (Ger.), Guisante (Sp.), Pisello (Ital.)

CULTURE. Plant in ground manured the previous season, else they will make more vines than peas. Marrowfat Peas, planted in rich ground, will not bear well, but they produce finely in sandy light soil. The Extra Early Tom Thumb and Laxton's Alpha will not produce a large crop without being in rich ground. Peas have to be planted in drills two inches deep and from two to three

Frotscher's Large Purple or New Orleans Market Eggplants.

feet apart. Tom Thumb can be planted one foot apart, whereas the White Marrowfat or Champion of England require three feet. The Extra Early, Alpha and Tom Thumb can be planted during August and September for fall. During November and December we plant the Marrowfat; January and February, or as late as March, all kinds can be planted, but for the latter month only the earliest varieties should be used as the late varieties will get mildewed before they bring a crop. Peas will bear much better if some brush or rods are stuck in drills to support them, except the very dwarf kinds.

Carter's Telephone.

Laxton's Alpha. Each year adds still more desirable features to this desirable early wrinkled variety; it produces fine, large-sized pods, very productive and of exquisite flavor, resembling the old Champion of England.

Carter's Telephone. Another wrinkled English late variety; grows from about $4\frac{1}{2}$ to 5 feet high. The pods are very long, containing from 8 to 12 fine flavored peas. It is productive.

Early Alaska.

Early Alaska. This is an extra early pea, blue in color, the earliest by a few days of any other kind; very pure and prolific, the best flavored pea among the Extra Early smooth podded kinds. Recommend it highly.

Paragon. It is a white wrinkled pea, second early, long straight pods, containing six to nine peas. Short stocky vine with luxuriant foliage, pods light green, quality unsurpassed, the largest producer known.

Bishop's Dwarf Long Pod.

An early dwarf variety; very stout and branching, requires no sticks. It is productive and of excellent quality.

Carter's Stratagem.

Carter's Stratagem.

This is a wrinkled variety from England. It is very distinct in vine and foliage; growing thick and large, does not need any support. It is the largest podded variety ever brought out; pods 4 to 5½ inches long, which cannot be surpassed in flavor, and is very productive.

Steckler's Sealed First and Best.

A selection made from the Extra Early or First and Best; an improved variety and selected strain; used largely by market gardeners of New Orleans, and recommended highly for home garden.

Eclipse. Very early and of excellent quality.

Laxton's Prolific Long Pod.

A green, narrow pea of good quality. Pods long and well filled. It is second early, and can be recommended for the use of market gardeners, being very prolific.

Thos. Laxton. Pods large, long and deep green in color; seed wrinkled, sweet and of fine flavor.

Champion of England. A late, large vined and large podded sort. The peas are sweet, tender and delicately flavored and are borne untillate in the season.

McLean's Advancer. This is another green wrinkled variety, about two weeks earlier than the foregoing kind.

Prize Winner. One of the earliest Sweet Wrinkled Peas. An ideal pea for the market gardeners. Decidedly superior to any other sort for the home garden.

Morning Star. Where earliness, productiveness, large sized pods and sweetness of flavor are desired, this is the variety to grow, they stand at the head of the list for the above fine qualities. In a favorable season they are ready for market in forty-two days.

Extra Early or First and Best

Extra Early or First and Best.

Very popular with market gardeners. It is very productive and well flavored. The stock we sell is as good as any, no matter whose name is put before Extra Early.

Nott's Excelsior. This pea resembles Wonder, being more uniform and productive and earlier. Seeds are green, wrinkled and square at the end like American Wonder.

Blue Beauty. An extra early variety of compact growth; productive and of fine flavor. Good market variety.

McLean's Little Gem. A dwarf wrinkled variety. It is early, very prolific, and of excellent flavor. Requires no sticks.

Eugenie. A white wrinkled variety of fine flavor; it is of the same season as the Advancer. Cannot be too highly recommended for family use.

Daisy or Dwarf Telephone. Half Dwarf, stocky, healthy and vigorous. Exceedingly productive.

Dwarf Blue Imperial. A very good bearer if planted early; pods are large and well filled.

Royal Dwarf Marrowfat. Similar to the large Marrowfat, but of dwarf habit.

Black-Eyed Marrowfat. This kind is planted more for the market than any other. It is very productive, and when young, quite tender. Grows about 4 feet high.

Large White Marrowfat. Similar to the above variety, except that it grows about two feet taller and is less productive.

Gradus or Prosperity. This is the earliest, large podded wrinkled pea in cultivation. The vine has heavy stems with dark-green leaves, and grows 3 feet in height. It produces uniformly large pods, measuring 4 to 4½ inches long, nearly round and well filled with large handsome peas.

Prince of Wales. Hardy, vigorous and of first quality, which is true of nearly all white wrinkled peas. Height 2½ feet. Seed white, wrinkled and flattened.

Early Washington, Early May or Frame, which are all the same thing, is about ten days later than the Extra Early. It is very productive, and keeps longer in bearing than the foregoing kind. Pods a little smaller. Very popular about New Orleans.

Early Tom Thumb. Very dwarfish and quite productive. Can be cultivated in rows a foot apart; requires no branches or sticks.

American Wonder. A wrinkled pea of prolific, early, of fine quality, and comes in after the Extra Early.

Melting Sugar. This variety is used either shelled or cooked in the pod, like string beans, and when young is very tender and sweet.

Dwarf Sugar. A variety of which the whole pod can be used after the string is drawn off from the back of the pod.

Tall Sugar. Has the same quality as the foregoing kind, only grows taller, and the pods are somewhat larger.

Clauditt. Since the introduction of this sort four or five years ago, it has rapidly grown in favor and is now superseding Alaska. The peas are the same color and average about one and a half times as large the pods being in about the same proportion. This means that less peas have to be picked to make a barrel. The quality of Clauditt Peas for sale on the market is fully equal to Alaska or any other blue peas, and its keeping qualities are better. The vines usually grow 2½ feet high, bearing seven to nine peas to the pod, and retaining their freshness a long time after picking. For early market planting cannot be surpassed anywhere.

Field or Cow Peas.

FOR PRICE LIST SEE RED PAGES IN BACK OF BOOK.

CULTURE. There are a great many varieties of Cow Peas, different in color and growth. They are planted mostly for fertilizing purposes and are sown broadcast, when in a good stand, and of sufficient height, they are plowed under. The Clay Pea is the most popular. There are several varieties called crowders; which do not grow as tall as the others, but produce a great many pods, which are used green, the same as snap beans, and if dried, like dried beans, make a very good dish. The crowders are of an oblong shape, almost pointed at one end; they are on an average larger than the other Field Peas. Lady Peas are small and white, they are generally planted between corn, so that they can run upon it. Dry, they are considered the very best variety for cooking. The Clay and Unknown Peas produce the most vines.

White Sugar Crowder or Forty Day. These are largely used in the Southern States for early Peas. They grow upright, bushy, and under ordinary conditions do not need support, very prolific and grow larger than ordinary Cow or Field Peas; very compact in pods; peas are flattened from being so close in pods.

Red Sugar Crowder. Same as White except in color.

Speckled Sugar Crowder. Same as White except in color.

Canada Field. For sowing broadcast as a fertilizer; used as common Cow Peas.

Clay Cow. This is one of the best peas for our Southern country, being a vigorous grower and an abundant bearer; very moist, giving proper nourishment to the soil. Begins to bear about two months after being planted.

Whippoorwill. Dark gray in color; robust growth, but of dwarfish habit; considered by some equal to other varieties of peas; this, however, is a matter of taste.

Wonderful. Similar to the Unknown in every respect, including habit of growth, color, etc. It is considered by those accustomed to all varieties to be somewhat superior to the Unknown.

Unknown Cow. This pea is a cross between Clay and Crowder Peas, making it a very desirable variety for both fertilizing purposes and eating peas; in color almost same as that of Clay and a little larger in size than the Clay Peas.

Red Ripper. This pea is pink in color and very small in size, but is a vigorous grower and good bearer; is considered a good plantation variety and is usually planted in corn and cane.

Steckler's Improved Wild Louisiana Cow. This Cow Pea is a native of Louisiana, seed is very small, about one-half the size of the Clay, consequently will go twice the distance of the others in planting. It will grow well on high or low land, and is claimed by people of the Northern part of this State to be without an equal.

Lady. These are small, round and pure white, and are generally planted between corn. A delicate vegetable.

New Era Cow. This Pea is fully two weeks earlier than the popular Whippoorwill variety; a very great advantage to the farmer.

In size it is one-third smaller than the Whippoorwill—another great advantage. It is a so-called bunch pea, similar to the Whippoorwill in growth. In sections of Illinois and Missouri, the New Era Pea is planted after the wheat crop has been cut, and matures early enough in the Fall to harvest in time to sow Winter Wheat on the same field. This cannot be said of any other variety of Cow Pea. They produce more seed than Whippoorwill and where known are used exclusively.

Black-Eyed Field. A long white pea with a large black eye, from which it derives its name, and belongs properly to the Cow Pea family.

Mixed. A mixture of the above varieties.

Fertilizing Beans.

FOR PRICE LIST SEE RED PAGES IN BACK OF BOOK.

Improved Velvet Bean. The Improved Velvet Bean, or more properly, "Pea," (as it belongs to the Cow Pea family), is a climbing plant growing to forty and fifty feet, and branches literally covered with foliage. It is a nitrogenous plant, enriching the ground so much that Orange growers in Florida plant the Velvet Bean in their groves for fertilizer as well as forage. Plant in rows four feet apart and one foot in the rows, two or three beans in a place, as soon as danger of frost is past, cultivated once or twice to give vines a start of weeds and grass, they grow very rapidly, and in two months the under leaves begin to drop, and by fall the mulch of leaves is often six to eight inches deep.

Soy or Soja Bean. (Glycerine Hispida) —Is a legume, and while it has long been a staple crop in Japan, it has but somewhat recently been cultivated in the United States. It grows to perfection only in a tropical or semi-tropical climate. In its native country, Japan, the seed is an important human food product, but in the United States its principal use at present is as forage plant for farm live stock and as a soil renovator. It is an upright, leafy branching plant, growing three or four feet high. The land should be prepared by plowing and harrowing in the early spring. Best success is attained by planting in drills, rows to be from $2\frac{1}{2}$ to 3 feet apart and the hills in the row 18 to 20 inches apart.

Pepper.

FOR PRICE LIST SEE RED PAGES IN BACK OF BOOK.

Piment (Fr.), Spanischer Pfeffer (Ger.), Pimento (Sp.), Peperone (Ital.)

CULTURE. Peppers are tender and require to be raised in the hot bed. Seed should be sown in a half to two feet apart, and a foot and a half in rows. There are more Peppers raised here than in other section of the country; the hot varieties are used for seasoning and making pepper sauce, the mild varieties are highly esteemed for salad. Care should be taken not to grow different kinds close together, as they mix very readily.

Long Red Cayenne.

Long Red Cayenne. Is very hot and pungent. Cultivated here and used for pepper sauce and seasoning purposes. There are two varieties, one is long and straight, and the other like shown in cut, which is the only kind we keep.

Golden Dawn Mango. Plants quite prolific. Fruit medium size and of inverted bell-shape, rich golden yellow, with very thick, sweet, mild flavored flesh.

Red Cherry.

Red Cherry. A small roundish variety, very hot and productive.

Sweet Spanish or Monstrous.

Sweet Spanish or Monstrous.

A very popular variety, much cultivated. It is very mild, grows to a large size, tapering towards the end, and, when green, is used as a salad. Superior for that purpose to any other kind.

Coral Gem Bouquet. One of the finest of the small sized varieties. Beautiful bright red pods so thickly set as to give it the appearance of a bouquet of corals. As a potted plant for florists it has proved a most rapid selling article.

Ruby King.

Ruby King. (Sweet.) This variety grows to a larger size than the Sweet Spanish or Monstrous, and is of different shape. The fruit is from 5 to 6 inches long by about 3 to 4 inches in diameter, and of bright red color. It is remarkably mild and pleasant in flavor, and can be sliced and eaten as a salad the same as the Sweet Spanish or Monstrous.

Columbus. A large and popular variety of sweet pepper. It is mild and sweet and used principally for salad.

Chili. A small variety, from three-fourths to an inch long. It is strong and used for pepper sauce; very prolific.

Bird Eye. Small as the name indicates. It is very hot and used principally for pepper vinegar.

Red Cluster.

Red Cluster. A variety of which the pods grow in bunches upright like the Chili, which the pods resemble, but are a little larger. Quite distinct and ornamental on account of the bright fruit and compact growth of the plant. It is hot and pungent.

Frottscher's Tabasco.

Frottscher's Tabasco. This variety is grown for the market as well as for making sauce. It is pungent and strong, also very prolific. It is easily gathered, as the fruit does not adhere to the stem and grows almost erect on the branches, as may be seen in the cut. This variety is used in manufacturing the well-known Tabasco Sauce. It is splendid for family use.

Bell or Bull Nose.

Bell or Bull Nose. Is a large oblong variety which is not sweet or mild, as thought by some people. The seeds are very hot. Used for pickling.

Chinese Giant. Double the size of Ruby King and equally as mild. The compact plants produce four or more extra large Peppers at the base very early in the season. which ripen while a second crop is setting on the

branches. Very vigorous, hardy grower, and a valuable variety for either the home or market garden.

Celestial. Beautiful Chinese novelty, starts to bear early and continues until frost. Until fully ripe the Peppers are of a delicate creamy yellow, then suddenly change to an intense, vivid scarlet, carried upright. Superior quality, fair size, clear, sharp flavor. Valuable for pickles and pepper sauce.

Potatoes.

FOR PRICE LIST SEE RED PAGES IN BACK OF BOOK.

Pomme de Terre (Fr.), Kartoffel (Ger.)

CULTURE. The following varieties were tried on the grounds of the Louisiana Experiment Station at Calhoun, La., and Audubon Park, New Orleans, among 150 different kinds tested they gave about the best results, both in yield and quality. Potatoes thrive and produce best in a light, dry but rich soil. Well decomposed stable manure is the best, but if not to be had, cotton seed meal, raw bone meal or any other fertilizer should be used to make the ground rich enough. If the ground was planted the fall previous with Cow Peas, which were plowed under, it will be in good condition for potatoes. Good sized tubers should be selected for planting, which can be cut in pieces not too small, each piece ought to contain at least three eyes. Plant in drills from two to three feet apart, according to the space and how to be cultivated afterwards. Field culture, two and a half to three feet apart, for garden, two feet will answer. We plant potatoes here from the end of December to the end of March, but the surest time is about the first of February. If planted earlier they should be planted deeper than if planted late and hilled up as they grow. If potatoes are planted shallow and not hilled up soon, they will suffer more, if caught by late frost, than if planted deep and not hilled up well. Early potatoes have not the same value here as in the North, as the time of planting is so long, and very often the first planting gets cut down by a frost, and a late planting, which may be just peeping through the ground, will escape and produce in advance of the first planted. A fair crop of potatoes can be raised here if planted in August, if the autumn is not too dry, they will bring nice tubers by the end of November. They should not be cut if planted at this time of the year, but planted whole. They should be put in a moist place before planting, so they may sprout. The early varieties are preferable for this time of planting. Most people are not careful enough in selecting their seeds. Some of the potatoes sold in this market for seed are not fit for planting.

Burbanks. Of late sorts this is more largely used than any other. It is of good size, fine form, and an excellent yielder. The flesh is white, and is very mealy and of fine flavor.

White Elephant. A fine late variety of excellent quality, fine flavor, wonderfully productive, of great beauty and a fine keeper. Tubers large and solid, growing closely together in the hills.

Steckler's French Market Lettuce is the Best.

Breeze's Peerless or Boston.

Breeze's Peerless or Boston.

Several years ago this variety was introduced, yet at present it is the leading kind for market as well as for family use. Skin dull white, sometimes slightly russeted; eyes few and shallow, round, occasionally oblong; grows to a large size; very productive, and earlier than the Jackson White. It is a general favorite in this section.

White Star. A very handsome and productive variety of medium earliness; tubers oblong, large and uniform in size; vines

strong, of a dark green color, stocky and vigorous; skin and flesh white and of fine quality; an excellent table variety, and keeps well.

Beauty of Hebron. We have tried this variety thoroughly and found it in every particular as has been represented. It is earlier and more mealy than the Vermont Early Rose, which resembles it very much, being a little lighter and more russeted in color. It is productive and of excellent table quality.

Bliss Early Triumph or Improved Bermuda.

second early potato ever offered; enormous yield; handsome and uniformly large; peculiarly white skin and flesh; perfect in quality and very dry

Bliss Early Triumph or Improved Bermuda.

One of the best early potatoes, combining the productiveness of the Peerless with the excellent qualities of Early Rose. It is more prolific than the former, and much earlier than the latter. Tubers are medium in size, round and very uniform in shape; eyes slightly depressed and color of a beautiful light red and is a standard variety.

Green Mountain.

This potato is of great merit; oval in shape, white skin and white flesh; one of the largest yielders; of fine keeping qualities, very dry and delicious flavor. We recommend it highly.

Carman No. 1.

This most valuable potato was introduced in 1894, and it is now a recognized high-class sort the world over. It is in every respect the finest

Extra Early Vermont.

Extra Early Vermont. Very similar to the Vermont Early Rose, but of a stronger growth a little earlier, and the tubers are more uniform and larger. It is an excellent table variety.

Rural New Yorker No. 2.

Rural New Yorker No. 2. This Potato is the nearest to perfection of any yet introduced, and exceeds all others in yield. It is of large size, very smooth skin; few eyes, distinct and shallow. Flesh very white, of excellent table quality.

Lawn Sprinklers, a Complete Line.

Jackson White. An old variety known to Louisiana for many years. It produces large tubers of excellent quality; long in shape and similar in appearance to the White Elephant, but a little larger; sound white flesh and good keeper, also a good yielder. We strongly recommend this for family use and market purposes.

Vermont Early Rose.

Vermont Early Rose. This is without any doubt the best potato for the table. It is oval, very shallow-eyed, pink skinned, very dry and mealy when boiled. This variety should not be planted too soon, from the fact that they make small stalks, and if cut down by frost they suffer more than other varieties, but they want rich light soil to grow to perfection.

Early Ohio.

Early Ohio. Bears some resemblance to the Early Triumph, except perhaps in color, which is a little lighter than the latter, and the shape of the eyes is somewhat different. Like all pink or red varieties it does best in sandy soil, but will grow very well in heavy soil, and not rot as easy during a wet season.

Sweet Potatoes.

FOR PRICE LIST SEE RED PAGES IN BACK OF BOOK.

Convolvulus Batatas.

CULTURE. The Sweet Potato is, next to corn, the most important food crop in the South. They are a wholesome and nutritious diet, good for man and beast. Though cultivated to a limited extent on the sandy lands of New Jersey and some of the Middle States, it thrives best on the light rich lands of the South, which bring their red and golden fruits to greatest perfection under the benign rays of a Southern sun. It is a plant of a warm climate, a child of the sun, much more nutritious than the Irish Potato on account of the great amount of saccharine matter it contains, and no Southern table should be found without it from the first day of August till the last day of May. Some plant early in spring the Potato itself in the prepared ridges, and cut the vines from the potato when large enough and plant them out; others start the potatoes in a bed prepared expressly for that purpose, and slip off the sprouts as they come up and set these out. The latter method will produce the earliest potatoes, others who set the vines say that they make the largest tubers. In preparing the land the soil should be thoroughly pulverized, the ridges laid off about five feet apart, well drawn up and rather flat on top. If everything is ready, and time for planting has arrived, do not wait for a rain, make a paste of clay and cow manure, in this dip the roots of the slips and press the earth firmly around them. Old slips are more tenacious of life than young ones and will under favorable circumstances answer best. Watering afterwards, if dry weather continues, of course will be beneficial. Otherwise plant your vines and slips just before or after a rain. Two feet apart in rows is considered a good distance. The ridges should never be disturbed by a plow from the time they are made until the potatoes are ready to be dug. Scrape off the grass and young weeds with the hoe, and pull up the large ones by hand. Crab grass is peculiarly inimical to the sweet potato, and should be carefully kept out of the patch. The vines should never be allowed to take root between the rows. Sweet Potatoes should be dug before a heavy frost occurs; a very light one will do no harm. The earth should be dry enough to keep it from sticking to the potatoes. The old fashioned potato bank is the best arrangement for keeping them, the main points being a dry place and ventilation. Varieties generally cultivated in the South:

Pumpkin Yam.

Pumpkin Yam. Taking into consideration quality and productiveness, the Yam stands at the head of the list. Frequently when baked the saccharine matter in the

shape of candy will be seen hanging to them in strings. Skin and flesh yellow and very sweet. Without doubt the best potato for family use.

New Orleans Market Cucumber Should be Planted Before any Other.

Southern Queen. Very similar to the former but smoother, the tubers having no veins, or very few; it is earlier, oval in shape.

Shanghai or California Yam.

This is the earliest variety we have, frequently,

under favorable circumstances, giving good sized tubers two months after planting the vine. Very productive, having given 300 bushels per acre when planted early and on rich land. Is almost the only kind cultivated for the New Orleans market. Skin dull white or yellow, flesh white, dry and mealy, in large specimens frequently stringy.

Pumpkin.

FOR PRICE LIST SEE RED PAGES IN BACK OF BOOK.

Potiron (Fr.), Kurbiss (Ger.), Calabaza (Sp.), Zucca (Ital.)

Golden Yellow Mammoth.

Frotscher's Green Striped Cashaw Crook Neck. This is extensively cultivated in the South for table use. The flesh is

fine grained, yellow; very sweet, and better than any Winter Squash. It keeps well; it takes the place here of Winter Squash, which are very little cultivated. The striped variety has been cultivated here for a century and never was found North or West. Some years ago it was brought out by Northern seedsmen as Japan Pie Pumpkin. We had this kind grown alongside of Frotscher's Green Striped Cashaw and found it one and the same.

Large Cheese. This is of a bright orange, sometimes salmon color, fine grained, and used for table or stock feed.

Kentucky Field. Large round, soft shell, salmon color; very productive; best for stock.

Yellow Striped Cashaw Crook Neck. Same as the Green Striped except in color.

Frotscher's Green Striped Cashaw Crook Neck.

Radish.

FOR PRICE LIST SEE RED PAGES IN BACK OF BOOK.

Radies, Rave (Fr.), Radies, Rettig (Ger.), Rabano (Sp.), Ravello (Ital.)

CULURE. This is a popular vegetable, and grown to a large extent. The ground for Radishes should be rich and mellow. The early small varieties can be sown broadcast among other crops, such as beets, peas, spinach, or where lettuce has been transplanted. Early varieties are sown in this section the whole year, but during summer they require frequent watering to make them grow quickly. The Yellow Summer Turnip or Golden Globe, White Summer Turnip and White Strasburg are best for planting during the summer months.

Use Raffia for Budding, Tying, Etc., Cheaper than Twine and lasts Longer.

Early Long Scarlet. (Short Top.) This is a desirable variety; of a bright scarlet color; short top and brittle.

Chartier. A long Radish, deep crimson colored at the top, shading off lighter until at the bottom it becomes white.

Rosy Gem. Perfectly round, deep scarlet color on top, and pure white at the bottom, the colors blending with each other so delicately as to excite the admiration of every lover of this healthful and valuable vegetable. It is also exceedingly tender, crisp and very delicious. Well adapted for shipping or the home garden.

Early Scarlet Turnip, White Tipped. (Forcing.) One of the handsomest of the turnip Radishes and a great favorite in many large markets for early planting outdoors. Roots slightly flattened on the under side, color very deep scarlet with a white tip; flesh white and of the best quality.

Crimson Globe. A most valuable Radish of European introduction. It grows quickly, and even when it attains a larger size it remains absolutely tender and of perfect flavor to the very last. It is of a beautiful deep crimson color, and in crispness and flavor it is unsurpassed.

Shippers' Favorite. Extra early bright scarlet and round. The tops are small; the flesh very crisp and tender, it is the very best for the market garden.

Glass or Cincinnati. This is a selection of the Long Scarlet, with exceedingly small tops, and grows from 6 to 7 inches long; of a beautiful bright scarlet color with a very delicate skin; one of the best and most attractive market varieties.

White Summer Turnip. This is a summer and fall variety. Oblong in shape, skin white, stands the heat well.

Early Long Scarlet (Short Top).

Chartier.

White Strasburgh. Of an oblong, tapering shape; the skin and flesh are pure white, firm, brittle and tender, and has a tendency of retaining its crispness even when the roots are old and large. It is a very good kind for summer use, as it withstands the severest heat, and grows very quickly.

New and Earliest White.

Twenty days from planting to the table, the earliest on record. Pure white, olive shaped; very little top, quality unexcelled. Very mild and tender.

Early Scarlet Turnip.

Early Scarlet Turnip. A small round variety, the favorite kind for family use. It is very early, crisp and mild when young.

Scarlet Half Long French.

Scarlet Half Long French.

Bright scarlet color, and when well grown, from 2 to 3 inches long, very brittle and tender.

Yellow Summer Turnip or Golden Globe.

Yellow Summer Turnip or Golden Globe. This stands the heat better than the foregoing kind. It is of an oblong shape, and of a beautiful bright yellow color. It should be sown very thinly. Best adapted for summer and fall sowing.

Early Scarlet, Olive Shaped. This is similar to the Half Long French, but shorter and not quite so bright in color. It is early and of good quality. Top short.

Brightest Scarlet or $\frac{3}{4}$ Long. A decided improvement in earliness and color over

other varieties of its class. Fit for use in about twenty-five days, when planted outdoors; has a small top, and no neck, bright scarlet color.

Scarlet, Olive-Shaped, White Tipped or French Breakfast.

A handsome Radish of the same shape as the Scarlet Half Long French, with end and root white. Quite tender.

Black Spanish. (Winter.) This is sown during fall and early winter. It is oval in shape, solid, and stands considerable cold weather without being hurt. It can be sown broadcast between turnips or planted in rows a foot apart, thinned out from three to four inches in the rows.

Chinese Rose. (Winter.) This is of a half long shape, and bright rose color. It is as hardy as the last described, not so popular, but superior to the foregoing kind. Consider it the best winter variety.

White California Mammoth.

This is a winter variety of large size, but can be sown here in early spring. It is the largest of all Radishes, and grows from 8 to 12 inches long, 2 to 3 in diameter.

White Vienna. Root white, very smooth and clean skinned, straight spindle shaped, from 2 to nearly 3 inches long, and from 4-5 to 1 inch broad at the top, neck short rounded, tinged with green and very narrow at the insertion of the leaf stalk; leaves rather large, broad and light green. An early variety.

Roquette.

FOR PRICE LIST SEE RED PAGES IN BACK OF BOOK.
Roquette (Fr.)

CULTURE. Sow from September to March. It is used as a salad, resembles the Cress in taste.

Salsify or Oyster Plant.

FOR PRICE LIST SEE RED PAGES IN BACK OF BOOK.
Salsifis (Fr.), Haferwurz (Ger.), Ostra Vegetal (Sp.), Sassefrica (Ital.)

CULTURE. A vegetable which ought to be more cultivated than it is. It is prepared in different ways, and partakes of the flavor of oysters. It should be sown in the fall of the year, not later than November. The ground ought to be manured the spring previous, deeply spaded and well pulverized. Sow in drills, about 10 inches apart, and thin out to three or four inches in the rows.

Sandwich Island. (Mammoth.) This is a sort that grows much quicker than the old varieties. It attains a large size; can be called with right mammoth. It is superior to the old kinds and has come into general cultivation.

Sorrel.

FOR PRICE LIST SEE RED PAGES IN BACK OF BOOK.

Oseille (Fr.), Sauerampfer (Ger.), Acetosa (Ital.),
Acetosa (Ital.)

CULTURE.

Plant in drills a foot apart, during the fall of the year, and thinned out from 3 to 4 inches in the drills. Sorrel is used for various purposes in the kitchen. It is used the same as Spinach, also in soup and as salad.

Sorrel.

Sandwich Island Mammoth

Spinach.

FOR PRICE LIST SEE RED PAGES IN BACK OF BOOK.

Epinard (Fr.), Spinat (Ger.), Espinago (Sp.), Spinace (Ital.)

CULTURE. A great deal of this is raised for the New Orleans market. It is very popular. Sown from September to the end of March. If the fall is dry and hot it is useless to sow it, as the seeds require moisture and cool nights to make them come up. The richer the ground the larger the leaves.

Extra Large Leaved Savoy.

Broad Leaved Flanders.

Extra Large Leaved Savoy.

The leaves of this variety are large, thick and a little curled. Very good for family use.

Broad Leaved Flanders.

This is the standard variety, both for market and family use. Leaves large, broad and succulent.

Squash.

FOR PRICE LIST SEE RED PAGES IN BACK OF BOOK.

Courge (Fr.), Kurbiss (Ger.), Calabaza Tontanera (Sp.), Zucca (Ital.)

CULTURE. Sow during March in hills from 3 to 4 feet apart, 6 to 8 seeds. When well up thin them out to three of the strongest plants. For a succession they can be planted as late as June. Some who protect by boxes, plant as soon as the first of February, but it is best to wait until the ground gets warm. When it is time to plant Corn it is also time to plant Squash.

Mammoth Chili.

The "Jumbo" of the squash family. Outer color rich orange yellow; skin is quite smooth with wide fissures. Flesh very thick and of a yellow color. Keeps well, is good for the table and profitable for stock. Have been grown to weigh over 200 pounds.

Large Warted Hubbard Squash.

A very large strain of the famous Hubbard, retaining all the excellent features of the parent with the additional merits of thicker flesh, fine color, increased size, better constitution and productiveness. It has an extremely hard, tough and densely-warted shell, which not only indicates superior quality, but renders it one of the best winter keepers.

Boston Marrow.

Cultivated to a large extent North and East for winter use, where it is used for custards, etc. It keeps for a long time and is of excellent quality.

Mammoth Chili.

When You Get It from Steckler Its Good.

Golden Custard. The mammoth strain of the Golden Bush Squash. Flesh golden yellow, very fine quality; unsurpassed in keeping qualities; excellent for preserves, pies, etc. No garden is complete without it.

The Hubbard.

The Hubbard. This is a winter Squash highly esteemed in the East. If planted here can be kept from one season to another, and is superior in flavor to the other kinds.

London Vegetable Marrow.

A variety producing large, oblong fruits, dark green at first, but becoming marbled with yellow and lighter green in stripes as they mature.

Orange Marrow. This is quite a distinct variety, very early, of running habit and of most delicate flavor and of an orange color.

Long Green or Summer Crook-Neck.

Long Green or Summer Crook-Neck.

This is a strong grower, and continues in bearing longer than some of the other varieties. It is of good quality.

Early Bush or Patty Pan.

Early Bush or Patty Pan. Is the earliest and most popular kind here. It is of dwarfish habit, grows bushy and does not take much room. Quality as good as any.

Tomatoes.

FOR PRICE LIST SEE RED PAGES IN BACK OF BOOK.
Tomate (Fr.), Leibesapfel (Ger.), Tomato (Sp.), Pomo D'Oro (Ital.)

CULTURE. Seed should be sown in January, in hot beds, or in boxes, which must be placed in a sheltered spot, near windows. In March they can be sown in open ground. Tomatoes are generally sown too thick and become too crowded when two or three inches high, which makes the plants thin and spindly. If they are transplanted when two or three inches high, about three inches apart each way, they will become short and sturdy, and will not suffer when planted into the open ground. Plant them from three to four inches apart. Some varieties can be planted closer; for instance, the extra Early, which is of very dwarfish habit, two and a half feet apart is enough. They should be supported by stakes. When allowed to grow up wild, the fruit which touches the ground will rot. For a late or fall crop the seed should be sown toward the latter part of May or during June.

Livingston's Paragon. A very solid variety, of a bright reddish crimson color. It is productive and keeps long in bearing. Well adapted for shipping.

Livingston's Paragon.

Livingston's Favorite. This Tomato is as perfect in shape and as solid as the Acme, but much larger, and of a handsome dark red color. We had some sent to our store by a customer, and they surely were the finest specimens of tomatoes we ever saw, and were admired by everybody who saw them. They will keep well, and do not crack. It has become the standard variety for this market.

Livingston's Favorite.

Flowering Annuals to be Had in their Planting Season.

Selected Trophy.

Selected Trophy. A very large smooth Tomato, more solid and heavier than any other kind. Has become a favorite variety.

Tree Tomato. A variety which grows like a tree, bearing large, plump red fruit. It is very productive, and quality excellent. A fine Tomato for the home garden.

Livingston's Stone. An excellent variety; one of the best and most desirable for our truck farmers. Thousands of bushel boxes are annually shipped from Florida to Southern and Northern markets, and no variety gives better satisfaction than this. For shipping it cannot be surpassed. The fruit is of the handsomest, brightest scarlet; more globular in shape than the Beauty or Favorite, and perfectly smooth and glossy. One of the best varieties for our climate.

Spark's Earliana. The earliest Tomato in the world. Of large uniform size and beautiful red color. Ripens thoroughly all over, the stem end coloring up perfectly. Almost seedless and as solid as a beefsteak. Most vigorous grower. A prodigious bearer, continuing until frost.

Ponderosa. Although not new still we consider it worth mentioning, as a good many of our customers are looking for quantity as well as quality, and they are combined in the Ponderosa Tomato. The vines are strong and vigorous, fruit smooth and free from ridges and skin firm. Its color is a

rich crimson. The fruit varies in weight from two to three pounds. It is a splendid variety for home use.

Livingston's Perfection. A very desirable early variety, which is more largely grown than any of its class. The fruit is almost round, ripens clear up to the stem, is solid and rich in flavor, the skin is both

Livingston's Stone.

thin and tough, making it a good shipper, while its clear, bright scarlet color makes it very attractive in appearance.

Livingston's Beauty.

Livingston's Beauty. This variety is quite distinct in color, being a very glossy crimson with a light tinge of purple (lighter than the Acme). It ripens with

the Acme or Paragon, but keeps longer. It is very perfect in shape and does not crack, like some of the thin skinned sorts.

Livingston's Acme.

Livingston's Acme. One of the prettiest and most solid Tomatoes ever introduced. It is of medium size, round and very smooth, strong grower, and a good and long bearer. It is the perfection of Tomatoes for family use, but will not answer for shipping purposes; the skin is too tender, and cracks when fully ripe. Of all the varieties introduced none has surpassed this kind when all qualities are brought into consideration. It does well about here where the ground is heavy.

Dwarf Champion. This is a distinct kind. The plants grow stiff and upright, and need no support as other kinds. Can be planted closely together, three feet apart. It is early and productive; the fruit resembles the Acme, but is of lighter color, ripens up even and does not crack.

Early Large Smooth Red. An early kind of medium size; smooth and productive.

Large Yellow. This is similar in shape to the Large Red, but more solid.

Extra Early Dwarf.

This is the earliest in cultivation. It is dwarfish in habit, fruit larger than the Dwarf Champion and more flat; bright scarlet in color, ribbed, and very productive. For an early market variety it cannot be surpassed.

King of the Earlies.

This variety was introduced here by Richard Protscher. It is very early and productive; color bright red, of good size and quite solid. The vine is medium, stout and branching. The buds appear soon, blossoms as a rule adhere and produce fruit. It is so much earlier than the Livingston varieties, that it should be planted for the first. The latter kind are so handsome in shape that they will sell better than any other, when the market is once well supplied.

Turnip.

FOR PRICE LIST SEE RED PAGES IN BACK OF BOOK.

Navet (Fr.), Ruebe (Ger.) Nabo Comun (Sp.), Navone (Ital.)

Extra Early Dwarf Tomato.

CULTURE. Turnips do best in new ground. When the soil has been worked long, it should receive a top dressing of ashes. If stable manure is used the ground should be manured the spring previous to sowing, so it may be well incorporated with the soil. When fresh manure is used the turnips are apt to become speckled. Sow from end of July to October for fall and winter, and in January, February and March for spring and summer use. They are generally sown broadcast, but the Ruta Baga should be sown in drills, or rather ridges and should not be sown later than the end of August; the Golden Ball and Aberdeen not later than the end of September. The Early White Flat Dutch, Early Spring and Pomeranian Globe are the best for spring, also good for autumn.

Pomeranian Globe.

Pomeranian Globe. This is selected from the Large White Globe. It is smoother and handsomer in shape; good to plant early in spring, when pulled before it is too large, it is a very saleable Turnip in the market.

Extra Early White Milan.

A splendid extra early turnip, in which the extreme earliness, small top and tap root of the Purple Top Milan are united with clear white skin and flesh. Very desirable for early planting.

Extra Early Purple Top Munich.

Introduced from Germany; flat, with red or purple top; same as the American variety, but fifteen days earlier to mature. It is very hardy, tender and of fine flavor.

Extra Early Purple Top Munich.

Purple Top Globe.

Early White Flat Dutch (Strap-Leaved.)

Purple Top Globe. Of the same shape as the Pomeranian Globe, but with purple top. Fine variety for table or stock. It is not quite so early as the Early Red or Purple Top. We recommend it very highly.

Long Island Purple Top

Ruta Baga. This kind is purely of American origin. The root is smoother than the foregoing variety, the flesh is of golden yellow, fine grained and solid; it is earlier to mature.

Seven Top. This variety is quite largely planted in the South for green forage during the winter months. The plants do not produce bulbs, but are of strong growth with abundant green foliage. In some sections Turnips are largely planted to make a green crop to turn under to enrich the soil, and this variety is one of the best for the purpose.

Robertson's Golden Ball.

Is the best of the Yellow Turnips for table use. It is very smooth, oval in shape, and of a beautiful orange color. Leaves are small. Should be sown in the fall of the year, and always in drills, so that the plants can be thinned out and worked.

Early White Flat Dutch.

(Strap-Leaved.) This is the earliest variety, and can be sown either broadcast or in drills; it is, without exception, the best and most popular sort for either table use or for market; is of a beautiful flat form, of pure white color, and of a delicate, mild flavor; it produces bulbs entirely free from small roots and with long narrow strap-leaves growing erect, which permits close culture.

Early Red or Purple Top.

(Strap-Leaved.) This is one of the most popular kinds. It is flat, with a small tap-root and a bright purple top. The leaves are narrow and grow erect from the bulb. The flesh is finely grained and rich.

Early Red or Purple Top (Strap-Leaved)

Improved Purple Top Ruta Baga. This is grown for feeding stock and also for table use. It is oblong in shape, yellow flesh, very solid. Should be sown in rows or ridges.

Large Cow Horn. A long white variety of very good quality, shaped like a cow's horn, from which the name. It is good for feeding stock.

Sweet German, or Hanover. Resembles the Ruta Baga in growth, it is a white flesh variety, very solid and sweet. If sown in the fall will keep well until spring without getting pithy like the flat varieties.

Amber Globe. This is a very beautiful formed variety, quite productive, solid flesh and attractive color; it keeps well and is desirable for either table use or for stock feeding.

Yellow Aberdeen. It is shaped like the Ruta Baga, color yellow with purple top. Good for table use or feeding stock.

Extra Early White French or White Egg. Is very early, tender and crisp. The shape is oblong, resembling an egg. Having tried it we found it as represented, quickly growing, tender and sweet.

White Spring. This is similar to the White Flat Dutch; not quite so large but round in shape. The tops are large, it is early, a good quality, and best adapted for spring planting.

Large White Globe. A very large kind, mostly grown for stock. It can be used for the table when young. Flesh coarse, but sweet, tops large.

Improved Purple Top Ruta Baga.

The Vegetable Pear.

The Vegetable Pear.

Sycios or Secium Edulis.

FOR PRICE LIST SEE RED PAGES IN BACK OF BOOK.

The Vegetable Pear, or "Mirliton," as the Creoles here call it, belongs to the Gourd family, and is known to botanists under the name of One-Seeded Cucumber. Like most of the gourds the plant is a vine and may be trained upon a trellis, on a fence or arbor; it is very ornamental and an abundant bearer. The fruit, if prepared right, forms a delightful dish, much finer in flavor than either eggplants, squashes or pumpkins, and may be cooked in half a dozen different ways, either stewed, baked, or as batter cakes. As the fruit contains but one seed, the whole fruit has to be planted. 15c. each. Postpaid 25c. each. Selected fruits.

Tobacco Seeds.

FOR PRICE LIST SEE RED PAGES IN BACK OF BOOK.

Imported Havana. We import from one of the principal growers the finest and purest strain of Vuelta Abajo, which is considered the best of the Havana varieties.

Connecticut Seed Leaf. A well known American variety.

Genuine Grand Point Perique. This variety of Tobacco is one of the best in the world, excelling in flavor and quality the far famed "Vuelta Abajo." The only genuine Perique is grown at Grand Point, and as the supply does not meet the increased demand many imitations are put on the market.

Virginia. "One Sucker," large leaf; wide, lance-shaped; rather coarse than fine.

Sumatra. The cream of cigar wrapper tobaccos; grows tall, fine texture, small fibre.

Improved White Burley. This is especially valuable to manufacturers either of cut or plug tobacco. It is often used for wrappers.

Grass and Field Seeds.

FOR PRICE LIST SEE RED PAGES IN BACK OF BOOK.

One of the most remarkable metamorphoses in the history of agriculture of any land has come over the entire South within the last twenty-four months or since the arrival of the boll weevil and the consequent devastation of the cotton fields. It has been proven by actual experiment along practical lines that there is as much profit in diversified farming as there ever was in the palmiest days of the production of the once omnipresent staple. It has been shown in actual and uncontrovertible figures that cotton is no longer King, and that corn and oats and live stock, together with the production of truck and other things give by far larger returns than did the soil before it was drained of its fertility by the one crop system.

In former days a large part of the income from the cotton plant went elsewhere to pay for the corn, the oats, the hay, the meat, the mules and other things that have been the main stand-by of the farmers of the North and the West. But now matters have changed and some of the products that were once imported are now being exported. To-day the States of Louisiana and Mississippi are more nearly independent than they were ever before in their agricultural history, and the time is not far distant when these States will experience such an impetus in the direction of diversification that they will become financially the richest of the Union.

That one crop system, however, has brought about a condition of affairs that was not experienced during the days when agriculture was young in these States. It has reduced the once natural fertility of the soil to such an extent that the Southern farmer of to-day must take immediate steps to prevent further loss of the elements and to enable him to take advantage of the free gifts of nature in the shape of an almost unlimited growing climate and an abundance of water. In other words, he must replenish the worn out soil with those elements that have been so freely taken, before he can hope to reach the full measure of his profits.

In no other way can this be done so well or so quickly as to cultivate those legumes that grow so well in the South and at the same time supply the soil with the nitrogen that has been stolen. Simultaneously the farmer must use these crops for the live stock that also thrives and is raised so cheaply that his profits are added to more largely than in any other section of the country. By the practice of these two things the farmer not only adds the elements that have been stolen but also increases his bank account and finds himself on the highway to prosperity never dreamed of when the land was continually tied up in the one staple crop.

Alfalfa, Cow Peas, the Velvet Bean, the Soy Bean, the Clovers and the like are, among other plants of a similar nature, admirably adapted to this double purpose and the farmer of to-day is growing them and making his pork at the rate of only 3 cents per pound where it costs the northern farmer from 9 to 11 cents. The corn crop of the State now is worth more than \$20,000,000 more than the cotton crop, and the hay crop from these other products will be worth more in dollars every year to the farmers than was the crop from the cotton fields when it averaged a million bales per annum.

The farmers have learned the great lesson. The history of the last 24 months has proved it. Financial prosperity is at hand if but the practices of those months are followed.

Red Clover.

Japan Clover,

White Dutch Clover.

Red Clover. Should be sown either during fall or early in spring. Ten to fifteen pounds to an acre.

White Dutch Clover. A grass sown for pasturing at the rate of five to eight pounds to the acre. Should be sown in fall and early spring.

Japan Clover. (*Lespedeza Striata*.) A legume. Southern seed. Grows anywhere; is tenacious in any soil; lasts always; well known in the South. Sow in spring in

permanent pastures by scarifying surface with disc harrow. It may be classed among the most valuable hay and pasture plants of the Southern States; is eaten greedily by stock—June until frost. In some soils it grows 20 inches high; is mowed; two tons to acre; rich soil grows 30 inches; appears in May; plant in spring half bushel per acre alone, or fall with rye and oats. This clover is spreading by natural means rapidly through the whole South. This plant made its appearance in a very unostentatious way some thirty-five years ago exactly how or from where no one seems to know. Probably it

New Orleans Market Cucumber Should be Planted Before any Other.

came from Japan—brought in on some merchant vessel. Wherever it came from it took quite naturally to this soil and climate, and, unnoticed, began advancing and spreading, until it is found almost over the entire Southern country.

Alsike or Swedish Clover.

Comes from the little province of Alsike in Sweden. One of the hardest varieties known; is perennial and does not winter kill; stands alike dronth or wet. A great favorite with bee keepers, as it has flowers having a sweet and agreeable odor and affords excellent forage for bees. Sow 5 to 8 pounds to the acre.

Crimson Clover. *Trifolium Incarnatum*.

Crimson Clover, an annual variety, which is a native of a warm climate, has not been grown as extensively as it deserves to be. It has been highly praised up as a forage plant, said to be equally as good for pasturage as well as for mowing and to do better in poor worn out soil than any other variety. It certainly has attracted a great deal of attention in the South during past years, and the Experiment Stations of Louisiana and other Southern States speak highly of it. It has been grown for years in the South of France and Germany, with great success and owing to its quick growth it is a very desirable variety. As a forage plant it may be mowed twice and then plowed under, thereby acting as a fertilizer and renovating the exhausted soil. In the Southern States Crimson Clover should be sown in the months of October and November. However, it may be sown with good results as late as January and February and will produce a fine crop. The demand for this variety of Clover has increased considerably of late years. From 10 to 20 pounds should be sown per acre.

Burr Clover. (*Medicago Macculata*.)

This variety of Clover was brought from Chili to California and thence to the States under the name of California Clover. It is often taken for Lucerne, which name is wrongly applied. The Burr Clover has only two or three yellow blossoms in each cluster, while the Lucerne has many blue blossoms in an elongated head. It furnishes good grazing from February till April or May. It is also good for hay. Sow, hulled, 20 pounds to the acre; in the burr, 1 bushel measure.

Alfalfa or Lucerne. (*Medicago Sativa*.)

Alfalfa is a deep rooting perennial plant, sending up numerous small clover like shoots. The flowers are violet purple, and instead of being in dense heads, as in red clover, are in erect racemes. The seeds are in spirally coiled pods and abundantly produced. The roots will penetrate to a great depth and are known to have gone 10 and 12 feet deep in 3 years growth. It has been recorded as sending its roots to a depth of over 50 feet. Its great rooting accounts for its long life and rapid growth, as it consumes food, moisture and the leach of fertilizers from depths entirely beyond the action of the drought or heat, which have been for years beyond the reach of ordinary plants. Where, 50 years ago, sage-brush was the only sign of vegetation, now fields of green Alfalfa are raising the crops of hay to feed sheep, hogs, horses and cattle that are, every winter, fattened to supply the market. It will grow anywhere, from sea level to 7,500 feet elevation, provided the water does not stand close to the surface of the ground. It grows best in a rich sandy loam, underlaid by a loose and permeable subsoil. It is a heavy feeder on lime, potash and phosphoric acid, but most essentially on lime, which is so common in this country, and which produces its rapid growth. Alfalfa will thrive well in any kind of soil except where it is wet; it is a forage plant for dry lands and it is known to have yielded one and two crops a year, in places, where other crops have failed entirely. Though it will do best in a rich sandy loam, it stands drought better than any other cultivated grass. Alfalfa is grown more or less in every State or Territory in the Union, from the Atlantic to the Pacific coast; in Canada in the North and in Mexico in the South.

Its use as a forage plant is getting more and more every year. It is hardy and stands our winter better than any other kind of clover. The seed should be sown about one inch deep. The seed does best planted here in Louisiana in late fall, during Sep-

Alfalfa or Lucerne.

tember, October or November, while it is planted almost the year round. The way to plant it to be successful is as follows: The ground should be thoroughly plowed, leaving no weeds. Plow first one way and then crossways, making thorough drainage; allow no water to remain on the seed beds or meadow, nor around them. To be successful it should be planted three consecutive years. The first year, work as above with 30 pounds of seed broadcast. The second year, about the same time, 20 pounds of the seed, without disturbing the ground. The third year, about the same time, 15 pounds of seed, without disturbing the ground; but simply broadcasting the seed by hand in the gaps, for no matter how careful you are in sowing the seed you will have gaps. Then you will have a meadow forever.

All farm animals are very fond of Alfalfa, green or dry, and it is calculated that one acre will, during the growing season from May till October add 150 pounds of meat to each of the 12 or 15 growing pigs which can be kept on it. Even the chickens and other fowls will, in winter, devour with relish a mash made up of scalded Alfalfa leaves mixed with bran and corn chop, and will amply repay the careful keeper by filling the egg basket with eggs, when they are worth 35 and 40 cents a dozen. Bees do very well on a field of Alfalfa in bloom, and bee keepers are sure of a good crop of honey, the finest, richest, thickest, whitest and best flavored in the world. No honey can equal it and it runs from 12 to 13 lbs. to the gallon, while the other honeys run from 11 to 12 lbs. The nectar is so abundantly secreted, during the time it is in bloom, that for a given acreage no plant will support as many colonies.

Bokhara Melilotus or Sweet Clover.

A hardy perennial Clover, growing wild in many sections, particularly the prairie States. Will thrive and prosper wherever Blue Grass, Red Clover and Alfalfa grow. May be sown in most any month; late fall and early spring considered best. A frequent practice is to sow it with winter grain. Flowers furnish abundant forage for bees.

Kentucky Blue Grass. (Poa Pratensis.)

This is also called smooth meadow grass, spear grass, and green grass, all three very appropriate, characteristic names, but Blue is a misnomer for this grass. It is not blue, but green as grass, and the greenest of grasses. Kentucky Blue Grass with its underground stems and many roots, sustains the heat and drought of the Southern States. It may be sown any time from September to April, preferable perhaps in the latter half of February or early in March. The surface of the land should be cleaned of trash of all kinds, smooth, even; and if recently plowed and harrowed, it should be rolled also. One year here gives a finer growth and show than two in Kentucky, or any other State so far North. Sow alone, 20 to 26 pounds, that is used; in mixture 4 to 6

Kentucky Blue Grass. two bushels should be pounds.

Meadow Fescue. (Festuca Pratensis.)

As a pasturage grass we consider this one of the most valuable. It is not affected by dry weather, as its roots penetrate the earth 12 to 15 inches; it is much relished by all kinds of stock on account of its long and tender leaves. It yields a very superior hay when cured. It is deserving of much more attention. Sow in spring or fall. Two bushels to the acre. In some sections it is called Randall Grass. This should not be confounded with the English Rye Grass, offered by some dealers

Meadow Fescue.

as the same variety.

Bermuda Grass. (Cynodon Dactylon.) Almost everybody living in this section of the country knows this grass; it is planted as a Lawn grass, and nothing will stand the sun better, or will make a prettier carpet when kept short, than this grass. It is also very valuable as a pasture and hay grass. It is only of late years that we have been able to obtain the seed of this grass, which heretofore had to be propagated by the roots, 6 pounds will sow an acre. Should be planted in the spring, but can also be sown later. Under the most favorable circumstances it takes from 60 to 90 days to sprout; requires damp weather and hot sun; but when once up it grows very rapidly.

Rescue Grass. (Ceratochlea Australis, or Bromus Shraderrii.) A forage plant from Australia. It grows during the winter. Sow the seed in the fall of the year, as it will not sprout as long as the ground is warm.

Sow 1½ to 2 bushels of seed to the acre. It is an annual winter grass. It varies in the time of starting growth. We have seen it ready for mowing the first of October, and furnish frequent cuttings till April. Again it may not start before January, nor be ready to cut until February. This depends upon the moisture and depression of temperature.

Rescue Grass.

Orchard Grass. (Dactylis Glomerata.) This is one of the best grasses for pasture. It grows quickly. Can be sown either in fall or spring. Sow from 1 to 1½ bushels

Orchard Grass.

per acre. It may be mowed from two to four times a year, according to season and treatment; yielding from one to three tons of excellent hay per acre on poor to medium land. In grazing and as hay, most animals select it in preference among mixtures in other grasses. After grazing, or mowing, few grasses grow so rapidly (three to six inches per week), and are soon ready again for tooth or blade. It is easily cured and handled. It is readily seeded and catches with certainty. Its long, deeply penetrating fibrous roots enable it to sustain itself and grow vigorously during droughts that dry up other grasses, except tall oat grass, which has similar roots and characteristics. It grows well in open lands and forests of large trees, the underbrush being all cleared off.

English, or Perennial Rye Grass. (Lolium Perenne.) This is the first grass

cultivated in England over two centuries ago, and at a still more remote period in France. It was long more widely known and cultivated than any other grass, became adapted to a great variety of soils and conditions, and a vast number (seventy or more) of varieties produced, some of which were greatly improved while others were inferior and became annuals. Introduced into the United States in the first quarter of the past century, English Rye is largely sown by our landscape gardeners for winter lawns on Bermuda sod. The Bermuda blades being easily affected by frost become red and rusty looking, while English Rye during winter presents

a most beautiful appearance, being of a vivid green, and as the Bermuda during April and May makes its appearance it overgrows the English Rye, causing

English Rye Grass.

the latter to decay and act as a fertilizer to the existing grass. It should be sown from September to March, at the rate of 3 bushels of seed per acre.

Tall Meadow Oat Grass. (*Arrhenatherum*)

Evergreen grass in Virginia and other Southern States, and it is the Tall Oat (*Avena Elatior*) of Linnaeus. It is closely related to the common oat and has a beautiful open panicle leaning slightly to one side. It is widely naturalized and well adapted to a great variety of soils. On sandy or gravelly soils it succeeds admirably, growing two to three feet high. On rich, dry upland it grows from five to seven feet high. It may be sown in March or April, and mowed the same season; but for heavier yield it is better to sow in September or October. Along the more Southern belt, it may be sown in November and onward till the middle of December. Whenever sown it is one of the most certain grasses to have a good catch. Not less than 2 bushels per acre should be sown.

Tall Meadow Oat Grass.

Carpet Grass. A broad leaf, short thick growing grass that makes excellent pastures and beautiful lawns. For permanent pasture it is unexcelled and may be eradicated at any time by simply plowing it up. Can be planted either in fall or early spring. One peck to the acre.

Red Top Grass. (*Agrostis Vulgaris*). This is the best grass of England, the herd grass of the United States; not in honor of any man, but probably because so well adapted to the herd. It is called also Fine Top Burden's Grass. It grows two to three feet high, and can be mown when four feet high. It grows well on hill tops and sides, in ditches, gullies and marshes, but delights in moist bottom land. It

furnishes considerable grazing during warm "spells" in winter, and in spring and summer an abundant supply of nutrition. It has a tendency, being very hardy, to increase in density of growth and extent of surface, and will continue indefinitely, though easily subdued by the plow. Cut before maturing seeds it makes a good hay and large quantity. Red Top and Timothy being adapted to the same soil

Red Top Grass.

and maturing at the same time, do well together and produce an excellent hay. Sow two bushels per acre, if alone, in September, October, February or March; if with Timothy for hay from 6 to 10 lbs., if with other grasses for pasture, 3 to 5 lbs. It is an excellent pasturage grass, and will grow on almost any kind of soil.

Seed Rye. This crop is used all over the South for fall, winter and spring pasturage, early green food, and for green manuring as well as for grain. Rye is very hardy, and will grow on poorer land than other grain crops. It makes good winter and spring pasture, and, if sown early enough, makes a good fall pasture also. It is a good spring soiling crop, giving the earliest bite of green stuff, makes a fair quality of hay if cut in bloom, or before it is fully headed out. It is very extensively grown, and succeeds well throughout the South. Rye can be very satisfactorily sown at the last working of corn or cotton, or it can be sown by itself from July to November. Sow at the rate of 1½ bushels per acre.

Italian Rye. Is coming into great favor in the fall it comes up quickly and makes a dense, matter turf, which gives most excellent grazing during the fall, winter and early spring. If it is desired to be used as a hay crop, it should not be grazed too long in the spring, as it shoots up very early making a thick growth of grass which when cut, cures up splendidly for hay. With a favorable season, it will yield three or four successive cuttings of most excellent and nutritious hay. It succeeds very well on all soils, and is particularly recommended for rich or heavy low grounds, and it will stand more overflow than any other grass with

which we have had experience. Italian Rye Grass is principally recommended for fall seeding, and can be sown during August, September and October. It should be sown at the rate of 60 pounds to the acre, and, as it is an annual, it requires seeding each year. It should be cut when in bloom for hay.

Seed Barley. The particular value of Barley for growing in the South is for fall, winter and spring grazing, and to cut, before it heads out full, to use as a hay crop. Barley stools out more, and makes fall, winter and spring grazing. Cut for hay, it cures up splendidly and is Superior in nutritive and feeding qualities. It is so easily grown, and succeeds so well throughout the south, that it should be much more largely grown than at present. It can be constantly grazed during the winter and spring, and is ready to cut two weeks ahead of wheat. It is well adapted for seeding at the last working of corn or cotton, and prevents winter leaching and washing of soils by winter

rains. Sow at the rate of from 1½ to 2 bushels per acre, broadcast. Our Barley is choice Southern raised seed, which is the only kind that should be sown in this section.

Red Rust Proof Oats. Have come into general cultivation. They are very valuable, and will save a great deal of corn on a farm. The seed of this variety has a reddish cast, a peculiar long beard, and is very heavy. It is the only kind which will not rust in the Southern climate. They can be sown as early as October, but should be pastured down as soon as they commence to joint, till February. When the ground is low, or the season wet, this cannot well be done with out destroying the whole crop. During January and February is the proper time to cut it for green fodder, if no pasturing can be done. One to one and a half bushels per acre is sufficient. These Oats have a tendency to stool, and therefore do not require as much per acre as common oats. Those who have not already tried this variety should do so.

Dwarf Essex Rape.

Dwarf Essex Rape. This Rape may be sown broadcast at the rate of 20 pounds per acre and harrowed in. Under favorable conditions it is ready for pasturing sheep or cattle within six weeks from the time of sowing, and on an average one acre will carry twelve to fifteen sheep six weeks to two months. In the Northern States it should be sown from May to September for fall pasturing, but as it thrives best in cool weather it should not be sown in the Southern States until September or October for winter pasture.

Hairy or Sand Vetch. Though it succeeds and produces good crops on poor sandy soil, it is much more vigorous on good land and grows to a height of four or five feet. It is perfectly hardy throughout the United States, remaining green all winter and should be sown during August and September mixed with Rye, which serves as a support for the plants, or in spring with Oats and Barley. It is the earliest crop for culture, being nearly a month earlier than Crimson Clover, and a full crop can be taken off the land in time for planting spring crops, 1½ bushels per acre.

Early Winter Turf Oats. Stool more than any other variety; can be pastured the whole winter, and are as hardy as Wheat. Claimed to produce more and heavier grain than other varieties, one to one and a half bushels to the acre.

Oregon Vetch. Our best leguminous soil enriching crop. Vetch hay is the equal of Alfalfa and can be Winter grazed. It grows 3 or 4 feet high, is easier cured. Hay making time is two weeks later. We usually sow 45 lbs. with 2 to 4 quarts of oats (for a support), one inch deep per acre, August to December; immediately afterward sow on top of ground 2 quarts Crimson Clover per acre. If Barley is sown with vetches a fall cutting can be had for hay, which will be followed by vetch hay in the Spring, and the land can then be put down to cow peas, thus making three (two of them leguminous) hay crops per year. 1½ bushels to acre.

Giant Beggar Weed. One of the most valuable of all forage plants; has been extensively planted and has given entire satisfaction. Its special features are. Restoring worn out land. Is an annual, when once established it requires no further attention. Is easily eradicated when desired. Requires no cultivation. Does not interfere with the growing of the other crops, and is sown like oats. Six pounds will plant an acre. Recommended highly for the South.

Wild Rice. The natural time for sowing is in the fall, although seed should be sown in the spring. The seed should first be thoroughly soaked in water so that it will sink into the desired situation. It may be sown in shallow water, not over three feet deep, and from this depth into the shore. While it will grow in deeper water, it should be allowed to work its own way, the start being made in shoal water. A still day should be chosen for sowing so that it will not drift off into too deep water. Sow 14 to 20 lbs. to acre.

Buckwheat. For a late summer crop Buckwheat is very profitable, especially in sections where cow peas do not succeed so well. It is easily grown, makes splendid flower food for bees and a large yield of grain, and is also valuable for turning under as an improver of the soil. Sow one bushel per acre.

JAPANMSE—This variety yields very largely. The kernels are larger than other stools, but owing to its branching qualities it need not be sown so thickly.

Oregon Vetch.

SILVER HULL. A superior variety in every way to the ordinary buckwheat which it has almost entirely superseded.

Seed Wheat. Popular southern variety, usually ripening in May in the South. It is an early ripening prolific sort. Principally planted here for early feed to cut green, also for hay and grazing. Seed is valuable for poultry and fowls. Two bushels will plant an acre.

Paspalum Dilatatum. Eight pounds to the acre should make a good stand on land which should produce 12 bushels of corn or 25 bushels of oats. If mixed thoroughly with dampened oats, $\frac{1}{2}$ bushel oats to 8 pounds of Paspalum Dilatatum, this would scatter the seed sufficiently when sown, then harrowed and dragged well—putting in the seed an inch or two. A peck of dry Paspalum Dilatatum seed usually weighs 6 pounds. When well up and rooted a slight grazing and tramping causes it to stool out the more. It may be sown on Bermuda sod. Purposes: Specially for grazing cows, horses, colts, etc. Our domestic poultry are very fond of it, and a drove of turkeys pick it with delight. We know of no plant that is such a conservator of the soil—enriching and preventing washes. The seeds are so small and light that they are troublesome to gather and cure. Only about 4 to 6 seed stalks push out from a tuft of roots; growing 2 to 3 feet high. It flourishes mostly in rich meadow like lands; an overflow will not kill it, as it is all the time asserting itself. A good plowing and cultivation will kill it, changing a field to other farm purposes.

Onobrychis Sativa. (Eparsette San-foin.) This perennial, European, pea-like plant has a high character as a feed in France. It is cultivated to but a limited extent in the South. It is worthy of a trial as it belongs to a warm climate. Twenty pounds to the acre.

Timothy. As a crop for hay, Timothy is probably unsurpassed by any other grass. It is greatly relished by all kinds of stock, especially horses; yields more nutritive matter than any other grass or forage plant. Being an early grass it is well adapted to spring and summer grazing, and if the fall season is favorable it will

grow sufficiently to furnish good fall grazing too. Saw 10 to 12 pounds to the acre.

Mammoth Russian Sunflower.

Mammoth Russian Sunflower.

Single heads measure 15 to 22 inches in diameter, and contain an immense amount of seed which is highly valued by all farmers and poultry breeders who have tried it as an excellent and cheap food for fowls. It is the best egg producing food known for poultry. It can be raised cheaper than corn, and is destined to be an article of great value. Every farmer should plant some of the seed in any waste piece of ground any time from early spring up to the middle of July. It is a wonderful improvement on the old native Sunflower, and besides the great value of the seed as poultry and stock food, its leaves make capital fodder while its strong, thick stalks can be profitably used as fuel. Three pounds of seed will plant one acre.

Descriptive List of the Different Varieties of the Sorghum Family

SUITABLE FOR THE SOUTHERN STATES.

FOR PRICES SEE RED PAGES IN BACK OF BOOK.

Early Improved Pedigreed
Amber Sorghum.

SORGHUM Is planted for feeding stock during the spring and early summer. For this purpose it should be sown as early in spring as possible in drills about two to three feet apart; one peck per acre. It makes excellent green fodder. As a forage plant for early cutting, to be fed to stock, we do not think that anything is equal to the Early Improved Pedigreed Amber Sorghum, such as we have been selling for years. After several cuttings, the branching varieties of Sorghum, also called Millo Maize, may be preferable, but more so for seed than forage. The Teosinte will give more fodder than any of the Sorghums. Some varieties not before described and rather new are the following: White and Yellow Millo Maize or Branching Dhoro should be planted in four or five foot rows and two to three feet in the drills, according to the strength of the land. The cultivation is like corn. It gives an abundance of leaves and seed; the latter are good feed for fowls.

Early Improved Pedigreed Amber Sorghum.

More popular than ever for forage. Relished in its green state or cured, by all stock, on account of sweetness of stalk and leaves. Equals in value any other crop known. Makes good syrup, but as the stalk is smaller than the Orange, that variety is recommended when the intention is to grow for syrup; 12½ lbs. of seed will plant an acre. Plant at any time from April to last of July in rows 3 feet apart, 6 to 10 seed, 12 to 18 inches apart in row, or drill lightly; can be sown broadcast; $\frac{1}{2}$ bushel per acre.

Broom Corn.

Broom Corn. There are many farmers who make this a most profitable crop. One acre will produce about 500 cwt. of brush and nearly 40 bushels of seed which is equal in value almost to oats for feed. Requires soil similar to corn. Same cultivation, but should be planted some later in the season. Put ground in prime condition. We think that more of our Southern farmers should grow Broom Corn for market. It is profitable. Frequently planted in drills $3\frac{1}{2}$ feet apart, leaving plants 6 inches apart; 10 to 20 lbs. to an acre.

German Millet. Of all the Millets this is the best. It makes good hay, and produces heavily. Three pecks sown to the acre broadcast secures a good stand. Can be sown from April till June, but the former month is the best time. Should be cut when in bloom. Recommended for this climate.

Early Orange Sorghum.

Equally as valuable as the Amber for forage, but on account of longer growth is considered better for syrup making; about 10 days later than the Amber. Culture the same as the Amber.

Kaffir Corn. (*Sorghum Kaffirum*). This is a variety of *Sorghum* non-saccharine, and distinctly differing in habit of growth and other characteristics from all others of that class. The plant is low, stalks perfectly erect, the foliage is wide, alternately closing on either side of the stalks. It does not stool from the root, but branches from the top joints; producing from two to four heads of grain from each stalk. The heads are long, narrow, and perfectly erect, well filled with white grain, which at maturity is slightly flecked with red or reddish brown spots. Weight 50 pounds per bushel. The average height of growth on good strong land, $5\frac{1}{2}$ to 6 feet; on thin land $4\frac{1}{2}$ to 5 feet. The stalk is stout, never blown about by winds, never tangles, and is always manageable, easily handled. A boy can gather the grain heads or fodder. The seed heads grow from 10 to 12 inches in length, and product of grain on good land easily reaches 50 to 60 bushels per acre. Plant 6 pounds per acre. It may be planted in the latter part of March or early in April. It bears earlier planting than other Millets or Sorghums. It should be put in rows not over three feet apart, even on the best land, and it bears thicker planting than any other variety of *Sorghum*; should be massed in the drill on good land, for either green or forage purposes. Use 10 pounds of seed per acre.

German Millet.

Dhouro or Egyptian Corn.

(*Sorghum Vulgare*). This is a well known cereal, it produces a large quantity of seed, of which fowls and animals are fond. Can also be sown broadcast for soiling, or in drills for fodder and seed. If sown in drills, one peck of seed per acre is ample. If sown broadcast one bushel per acre. For grain, the stalks should not be nearer than 10 inches in the drill, but if to be cut repeatedly for soiling, it is better to sow quite thickly in the hills. Seed should not be sown too early, and covered from one-half to one inch. If too much rain in the spring the seed will not come up well; they require more heat than the other sorghums.

Red Dhouro. Similar to the Jerusalem Corn. Grain same size and shape, but of Red color, instead of white, as the Jerusalem Corn. It withstands dry weather better than

Kaffir Corn and Millo Maize and is a sure cropper every year. Raised more for the grain than for fodder. Yields immensely. Three to five pounds will plant an acre.

Pearl or Cattail Millet. Makes a splendid continuous cutting forage plant for either green feed or hay. Makes a most nutritious and valuable continuous cutting forage plant, and is increasing in popularity all throughout the country. It will grow ten to twelve feet high, but cutting can commence when it has attained a height of three to four feet, when it will stool out enormously and make a rapid growth, and it can be cut this way three or four times in a season. It can be fed either green or cured as dry forage, making a most nutritious feed, which is relished by all kinds of stock. It is largely used by dairymen and others who have cattle for furnishing them green feed all through the summer, as, if a

sufficient quantity is sown, it can be cut as desired, furnishing a daily supply of green food until killed by freezing weather. Sow 5 lbs. of seed per acre in drill three feet apart, or sown broadcast at the rate of 20 to 30 pounds per acre.

Hungarian Millet. This Millet makes a valuable crop on rich soil, especially on low lands. It is considered very nutritious. It is important in buying Millet; as well as other seeds, to get the true seed. Sow in this climate from the latter part of April to the end of July, at the rate of 1 bushel to the acre.

Jerusalem Corn. This belongs to the non-saccharine Sorghums. Grows about three feet high. Makes one large head on main stalk and several smaller heads on side shoots, often as many as eight heads on one stalk. The grain is pure white and nearly flat. Ten lbs. will plant an acre.

Teosinte.

crop, a single farmer producing five thousand dollars worth per annum of the hay. Propagated to any desired extent by rapid increase of tillers, it is esteemed in Florida and other parts of the South as a first class forage. Cattle eat it with avidity, green or dry. Three pounds to the acre, planted in hills same as corn.

Johnson Grass. (Sorghum Halapense.) Perennial and has cane-like roots, or more properly, underground stems, from the size of a goose quill to that of the little finger. These roots are tender, and hogs are fond of and thrive on them in winter. One to one and a half bushels of a good sample of this seed is sufficient for one acre of land. The leaf, stalk and panicle of this grass resemble those of other sorghums. It grows on any land where corn will grow; and like the latter, the better the land the heavier the crop. On rich land the culms obtain a size of over half an inch in diameter, and a height of seven feet. It should be cut while tender, and then all live stock are fond of it, for a few weeks are enough to render it so coarse and hard that animals refuse it or eat sparingly. When once planted it cannot be eradicated.

Teosinte. (Reana or Euchloena Luxurians.) One of the most luxuriant growing forage plants introduced, of South American origin, and one which in point of growth and amount of nourishing foliage excels any other forage plant known. In good soil and with proper cultivation it will throw up from 15 to 30 stalks on one plant to a height of from 10 to 12 feet, densely covered with foliage. In order to be successful with Teosinte, it should be sown in drills as early as the beginning of March, as it takes generally from 14 to 20 days before the seed germinates. In this manner a good stand may be had at the beginning of April. For green fodder Teosinte may be cut three or four times during the season, but then it should not be allowed to grow any taller than three or four feet. In cutting it is advisable to cut it clean to the ground, as this will insure a heavier growth than when cut too high. Teosinte in its own native country is a perennial, but with us it is invariably killed during winter and may therefore be considered an annual. The seed, which we have on hand, is imported, as in our climate it will never produce any. Two pounds per acre.

Rural Branching Sorghum or Millo Maize. Produces the seed heads upright in a vertical position, while others are drooping. The seeds are smaller, but will keep longer than the other varieties, the stalk grows very large and produces a good many large leaves. It suckers and tillers more and more the oftener it is cut. It exceeds greatly in yield of green fodder any of the familiar fodder plants except the "Teosinte." It should be planted exclusively in the drill four feet apart, 18 to 20 inches in the drills. One peck per acre.

Guinea Grass. Although this grass will do well on rather poor sandy land, it does much better on richer or fertilized land. Wherever it has had proper care the crop is enormous and satisfactory. A tropical grass originally from Africa, it is now grown largely in the East and West Indies. In Jamaica it is held next to sugar in value of the hay.

Flower Seeds.

The following list of Flower Seeds is not very large, but it contains all which are desired and which will do well in the Southern climate. We import them from one of the most celebrated growers in Prussia, and they are of the best quality. There are very few or no flower seeds raised in this country, and Northern houses, which publish large lists and catalogues, get them from just the same source as ourselves; but they, on the average, sell them much higher than we do. Some varieties, which are biennial in Europe or North America, flower here the first season; in fact, if they do not they generally do not flower at all, as they usually are destroyed by the continued long heat of summer. Some kinds grow quicker here and come to a greater perfection than in a more Northern latitude.

Flower seeds require a little more care in sowing than the vegetable seeds. The ground should be well pulverized and light enough not to bake after a rain. Some of the more delicate and finer varieties are better sown in boxes or seed pans, where they can be handled and protected from hard rains or cold weather, the other kinds do not transplant well, and are better sown at once where they are to remain, or a few seeds may be sown in small pots to facilitate transplanting into the garden without disturbing the plants, when large enough. Some have very fine seeds, which the mere pressing of the hand or spade to the soil will cover; others may be covered one-fourth of an inch, according to their size. Watering should be done carefully, and if not done with a syringe, a watering pot, where the holes of the spout are very fine, should be used.

By setting the plants out, or sowing the seeds in the border, consideration should be taken of the height so that the taller varieties may be in the middle and the dwarf kinds on the edge of the bed.

Plant Tobacco Seed for Your Own Consumption.

The seeds are put up in 5c. and 10c. packages; 15 and 24 packages for one dollar, except a few rare or costly kinds, where the price is noted. All flower seeds in packages are mailed free of postage to the purchaser. Where there is more than one color, we generally import them mixed, as we find that most of our customers do not wish to purchase six packages or more of one variety to get all colors. One package of Asters, Zinnia, Phlox, Chinese Pink, German Stocks, Petunia, Portulaca, and others, will always contain an equal mixture of the best colors.

ANTIRRHINUM MAJUS—Snapdragon. Choice mixed. Showy plant of various colors. About two feet high. Should be sown early if perfect flowers are desired. Sow from October till March.

ASTER—Semple's Branching. Beautiful for cut-flowers. The branching habit is accompanied with great vigor of growth and profusion of bloom. The flowers are large double, with graceful wavy petals, borne on long stiff stems, and the colors are clear and handsome. Excellent for cutting, 2 feet. December till March.

Althea Rosea.

ALTHEA ROSEA—Hollyhock. This flower has been much improved and is very easily cultivated. Can be sown from October till April. Very hardy; from four to six feet high.

ALYSSUM MARITIMUM—Sweet Alyssum. Very free flowering plants, about six inches high, with white flowers; very fragrant. Sow from October till April.

Amaranthus Caudatus.

German Quilled Aster.

AMARANTHUS TRICOLOR—Three colored Amaranth. Very showy; cultivated on account of its leaves, which are green, yellow and red. Two to three feet high.

AMARANTHUS BICOLOR—Two-colored Amaranth. Crimson and green variegated foliage; good for edging. Two feet high.

AMARANTHUS ATROPURPUREUS. Is covered with long drooping spikes of purple flowers; four feet.

Trufant's Peony Flowered Aster.

ASTER—Trufant's Peony Flowered Perfection. Large double peony-shaped flowers of fine mixed colors, one of the best varieties. Two feet high; sow from December till March. Asters should be sown in a box or in pots, and kept in a greenhouse, or near a window; when large enough, transplant into the border. Take a shovel of compost and mix with the ground before planting. Put three to four plants together and they will show better.

Adonis Autumnalis.

AMARANTHUS CAUDATUS—Love Lies Bleeding. Long red racemes with blood red flowers. Very graceful; three feet high.

ASTER—Queen Margaret, German Quilled. Perfect double quilled flower, of all shades, from white to dark purple crimson. One and a half feet high. Sow from December till March.

ADONIS AUTUMNALIS—Flos Adonis, or Pheasant's Eye. Showy crimson flower of long duration. One foot high. Sow from November till April.

AQUILEGIA—Columbine. A showy and beautiful flower of different colors; two feet high. Sow from October till March. Should be sown early if flowers are wished; if sown late will not bloom till next season.

Double Daisy.

Amaranthus Salicifolius. Fountain Plant.

Calceola Coccinea.

AMARANTHUS SALICIFOLIUS—Fountain Plant. Rich colored foliage, very graceful. Five to six feet high. All varieties of Amaranthus should be sown from February to June.

BALSAMINA. Improved Camelia-flowered, very double and beautiful colors. In rich ground and during dry weather they require plenty of water.

BALSAMINA CAMELIA FLORA ALBA. Pure white flowers, about two feet high, used for bouquets. Sow all Balsaminas from February till August.

BELLIS PERENNIS—Daisy. Finest double mixed variety; four inches high. From October till January.

SHASTA DAISY—Burbank's New Double Fringed. This new one is an absolute perpetual bloomer throughout the whole year wherever it has a chance. In fact the blossoms must be cut or it will blossom itself to death. The blossoms can be cut by the armfuls. About one-third will come double, balance extremely large single fringed flowers.

BROWALLIA ELATA MAJOR. A free blooming plant of about 12 inches in height, with very showy dark blue flowers. If sown in March it will flower all summer, but can also be sown in November, potted and kept under glass, where it will begin to bloom in the latter part of December and continue all winter.

BEGONIA TUBEROSA. A very thankful greenhouse plant with tuberous roots and large showy pink, white or red flowers. It is of easy culture and can be kept out of doors in a half shady place after the 15th of April. Sow from October till March, in flower pots. Price, per packet, 25 cents.

BEGONIA REX. A beautiful and showy greenhouse foliage plant of easy culture. Will do well out of doors during summer months, but requires a shady place. Sow like above. Price, per packet, 25 cents.

CALCEOLA COCCINEA—Scarlet Tassel Flower. A profuse flowering plant, with tassel-shaped flowers in cluster; one and a half feet. Sow February till May.

CALENDULA OFFICINALIS—Pot Marigold. A plant which properly speaking, belongs to the aromatic herbs, but cultivated for the flowers, which vary in different shades of yellow; one and a half feet high. From January till April.

CANNA INDICA—Indian Shot. Handsome foliage plants with large spikes of bright crimson, scarlet, bright yellow, orange and spotted flowers of

great attraction. Sow in boxes or flower pots from November to March. If sown in November they must be kept in a cold frame over winter.

CAMPANULA SPECULUM—Bell Flower, or Venus' Looking Glass. Free flowering plants of different colors, from white to dark blue; one foot high. Sow December till March.

CELOSIA CRISTATA—Dwarf Cock's Comb. Well known class of flowers which are very ornamental, producing large head of crimson and yellow flowers one to two feet high. Sow from February till August.

CHIERANTHUS CHEIRI—Wall Flower. This flower is highly esteemed in some parts of Europe, produces large spikes of double flowers which are very fragrant. Two feet high. November till March.

CHRYSANTHEMUM TRICOLOR—(Carinatum). Summer Chrysanthemum. Showy summer bloomers of different colors, 12 to 15 inches high. If grouped together they have a pleasing effect. Sow in March and April.

CINERARIA HYBRIDA. A beautiful greenhouse plant. Seed should be sown in October or November, in flower pots and they will flower in spring. Must be kept in a green house. Per package 25 cents.

CINERARIA MARITIMA—Dusty Miller. A very handsome border plant, which is cultivated on account of its silvery white leaves. Stands our summer well.

COLEUS. A well known and beautiful bedding plant which can be easily propagated by seeds which produce different shades of colored plants.

CENTAUREA CYANUS—Bottle Pink. A hardy annual of easy culture; of various colors; two feet high.

CORREOPSIS. (Calleopsis.)—Bright Eye Daisy. Handsome free blooming plants, of the easiest culture; two or three feet high, with yellow and brown daisy-like flowers. December to March.

CYCLAMEN PERSICUM—Alpine Violet. A greenhouse plant with tuberous or rather bulbous roots, blooming abundantly, being possessed of very ornamental foliage and of easy culture. It should not be missing in any collection of greenhouse plants. Sow in August and September in pots, transplant in small pots when large enough, and keep either in greenhouse or a room near the window, and give plenty of light and air. Keep bulbs dry during summer. Price, per packet, 25 cents.

Flowering Annuals to be Had in their Planting Season.

Centaurea Suavolens.

CENTAUREA SUAVOLENS—Yellow, Sweet Sultan. December till April.

COSMOS BIPINNATA HYBRIDA. A very showy annual similar in shape to the Bright-Eye Daisy or Correopsis, but taller and more brilliant in color.

DIANTHUS BARBATUS—Sweet William. A well known plant, which has been much improved. Their beautiful colors make them very showy. Should be sown early otherwise they will not flower the first spring; one and a half feet high. October till April.

DIANTHUS CARYOPHYLLUS—Carnation Pink. This is a well known and highly esteemed class of flowers. They are double, of different colors, and very fragrant; can be sown either in fall or spring; should be shaded during midsummer and protected from hard rains; three to four feet high. November till April.

Dianthus Caryophyllus.

DIANTHUS CARYOPHYLLUS MARGARITAE ROBUSTUS, fl. pl. Semi-high double Margaret Carnation. This beautiful pink originated in Italy. It is of a dwarfish habit, grows from 12 to 15 inches high; the stalks are exceedingly strong, and therefore need no support. The flowers are much variegated, occasionally producing yellow ones. What makes this variety remarkable is that it flowers after four months from the time of sowing the seed, and produces about 80 per cent. of double flowers, unlike other Carnations, which are biennial and only bloom the second year.

Cosmos Bipinnata Hybrida.

DIANTHUS CHINENSIS—Chinese Pink. A beautiful class of annuals of various colors, which flower very profusely in early spring and summer, one foot high. From October till April.

DIANTHUS PLUMARIS—Border Pink. A fragrant pink used for edging. The flowers are tinged, generally pink or white with a dark eye. Does not flower the first year; two feet high. Sow from January till April.

DIANTHUS HEDDEWIGII—Japan Pink. This is the most showy of any of the annual pinks. The flowers are very large and of brilliant colors; one foot high. Sow from October till April.

Dianthus Picotee.

DIANTHUS PICOTEE—Finest hybrids, Stage flowers saved from a collection of over 500 named varieties; per package, 25 cents.

Early Dwarf Flowering Carnation.

DIANTHUS PUMILA—Early Dwarf Flowering Carnation. If sown early, this variety will flower the first season. They are quite dwarfish and flower very profusely. November till April.

DELPHINIUM IMPERIALIS, fl. pl.—Imperial Flowering Larkspur. Very handsome variety of symmetrical form. Mixed colors; bright red, dark blue and red striped; 1½ feet high.

DELPHINIUM AJACIS—Rocket Larkspur. Mixed colors; very showy; two and a half feet.

Delphinium Chinensis.

DELPHINIUM CHINENSIS—Dwarf China Larkspur. Mixed colors; very pretty; one foot high. November till April.

NOTE—None of the Delphiniums or Larkspur transplant well, and are better sown at once where they are intended to remain.

DAHLIA—Large flowering Dahlia. Seed sown in the spring will flower by June. Very pretty colors are obtained from seed, the semi-double or single can be pulled up as they bloom; but those seeds which are saved from the double varieties will produce a good percentage of double flowers. February till June.

ESCHSCHOLTZIA CALIFORNICA—California Poppy. A very free flowering plant, good for masses. Does not transplant well. One foot high. December till April.

GAILLARDIA LORENTZIANA—Two colored Gaillardia. Very showy plants which continue to flower for a long time. Flowers red, bordered with orange yellow. One and a half feet high. January till April.

GOMPHRENA ALBA AND PURPUREA—White and Crimson Bachelor Button or Globe Amaranth. Well known variety of flowers; very early and free flowering; continue to flower for a long time. Two feet high. From February to August.

GERANIUM ZONALE—Zonale Geranium. Seed saved from large flowering varieties of different colors; should be sown in seed pans, and when large enough transplanted into pots, where they can be left or transplanted in spring into the open ground.

GERANIUM PELARGONIUM—Large flowering Pelargonium. Spotted varieties; 25 cents per package.

GOLDEN GLOW—(Rudbeckia). Grows 8 feet high, branching freely and bearing by the hundreds, on long, graceful stems; exquisite double flowers of the brightest golden color and as large as a Cactus Dahlia. As cut flowers the blooms last well. Perfectly hardy and blooms continuously throughout the summer months. Per packet, 25 cents.

GERANIUM ODORATISSIMA—Apple scented Geranium. Cultivated on account of its fragrant leaves, 25 per package. Both of these kinds are pot plants and require shade during hot weather. Should be sown during fall and winter.

Heliotropium.

HELIOTROPIUM—Heliotrope. Mixed varieties with dark and light shaded flowers. A well known plant esteemed for the fragrance of its flowers, which are produced during the whole summer in great profusion. This plant is generally propagated by cutting, but can also be raised from seed. Should be sown in hot bed if sown early.

HELICHRYSUM MONSTROSUM ALBUM—White Everlasting Flower. Very showy double flowers. One and a half feet.

HELICHRYSUM MONSTROSUM RUBRUM—Red Everlasting Flower. Very ornamental. One and a half feet high. December till April. Does not transplant well.

HELIANTHUS, fl. pl.—Double Flowering Sunflower. A well known plant, with showy yellow flowers, the double is often cultivated in flower gardens. The single varieties are cultivated mostly for the seed. They are said to be anti-malarious. Four feet high. February till May.

IBERIS AMARA—White Candytuft. A well known plant raised a good deal by florists for bouquets. Can be sown at different times to have a succession of flowers. One foot high.

IBERIS UMBELATA ROSEA—Purple Candytuft. One foot. October till April.

LINUM GRANDIFLORUM RUBRUM—Scarlet Flax. A very pretty plant for masses or borders, with bright scarlet flowers, dark in the center. One foot. January till April.

Use Raffia for Budding, Tying, Etc., Cheaper than Twine and lasts Longer.

Lobelia Erinus.

Lychnis Chalcedonica.

Ice Plant.

LOBELIA ERINUS—Lobelia. A very graceful plant with white and blue flowers, well adapted to hanging baskets or borders. Half foot. October till March.

LYCHNIS CHALCEDONICA—Lychnis. Fine plants with scarlet, white and rose colored flowers. Two feet. December till April.

MIMULUS TIGRINUS—Monkey Flower. Showy flowers of yellow and brown. Should be sown in a shady place. Does not transplant well. Half foot. December till March.

MESEMBRYANTHEMUM CRYSTALLINUM—Ice Plant. Neat plant with icy looking foliage. It is of spreading habit. Good for baskets or beds. One foot. February till March.

MATHIOLA ANNUA—Ten weeks stocks. This is one of the finest annuals in cultivation. Large flowers of all colors, from white to dark blue or crimson. Should be sown in pots or pans, and when large enough transplanted into rich soil. One and a quarter feet. October till March.

Double Matricaria.

MATRICARIA CAPENSIS—Double Matricaria. White double flowers, resembling the Daisy, but smaller, are fine for bouquets, blooms nearly the whole summer. Two feet. December till March.

MIRABILIS JALAPA—Four o'clock or Marvel of Peru. A well known plant of easy culture; produc-

ing flowers of various colors. It forms a root which can be preserved from one year to another. Three feet. February till June.

MIMOSA PUDICA—Sensitive Plant. A curious and interesting plant which folds up its leaves when touched. One foot. February till March.

MYOSOTIS PALUSTRIS—Forget-Me-Not. A fine little plant, with small, blue, star-like flowers. Should have a moist, shady situation. Half foot high. December till March.

NASTURTIUM—Tropæolum Majus. See Vegetable Plants, page 62.

NEMOPHILA MACULATA. Large white flowers spotted with violet. One foot high. December till April.

NEMOPHILA INSIGNIS—Blue Grove Love. Plants of easy culture, very pretty and profuse bloomers. Bright blue with white center. One foot high.

Nigella Damascena.

NIGELA DAMASCENA—Love in a Mist. Plants of easy culture, with light blue flowers. Does not transplant well. One foot high. December till April.

NIEREMBERGIA GRACILIS—Nierembergia. Nice plants with delicate foliage, and white flowers, tinted with lilac. One foot high. November till April.

Oenothera Lamarckiana.

OENOTHERA LAMARCKIANA—Evening Primrose. Showy, large yellow flowers. Two feet high. November till April.

Papaver Ranunculus Flowered.

PAPAVER RANUNCULUS FLOWERED. Double fringed flowers, very showy. Cannot be transplanted. Two feet high. October till March.

PAPAVER SOMNIFERUM, or Carnation Poppy. Double flowering Poppy. Of different colors; very showy.

PARIS DAISIES—French Marguerites. A beautiful plant of easy culture and one that generally gives best satisfaction, flower white and yellow; $1\frac{1}{2}$ to 2 inches in diameter.

SHIRLEY POPPIES—Single. A very beautiful selection of Ranunculus-flowered Poppy. The range of colors extending from pure white through the most delicate shades of pale pink, rose, and carmine to crimson. Whilst edged, shaded and striped. The form is semi-double. A valuable flower for table and general decoration, as the blooms, when cut young, will keep in water several days.

SINGLE POPPIES. The colors range through all shades of delicate rose, pink, carmine and brilliant crimson. Many of the large single flowers are edged with white.

Shirley Poppies.

PETUNIA HYBRIDA—Petunia. Splendid mixed hybrid varieties. A very decorative plant of various colors, well known to almost every lover of flowers. Plants are of spreading habit; about one foot high. January till May.

Petunia Hybrida.

DOUBLE LARGE FLOWERING PETUNIA. Our seed will produce flowers large, fragrant, elegantly formed and beautiful, either for house, garden or conservatory. The double Petunias are great favorites for pot culture in ordinary windows. Package 25c.

Petunia Hybrida Double.

PHLOX DRUMMONDII—Mixed Drummond Phlox. One of the best and most popular annuals in cultivation. Their various colors and length of flowering, with easy culture, make them favorites with every one. One foot high. December till April.

PHLOX DRUMMONDII GRANDIFLORA STELLATA SPLENDENS. This is admitted to be the richest colored and most effective of all large flowered Phloxes. It combines all the good qualities of the Splendens, with the addition of a clearly defined, pure white star, which contrasts strikingly with the vivid crimson of the flowers.

PHLOX DRUMMONDII GRANDIFLORA ALBA. Pure white, some with purple or violet eyes.

PERENNIAL PHLOX. For a permanent flower bed few plants are more desirable, as they are perfectly hardy, and will flourish in any soil. The flowers range from pure white to crimson or rose, while others are striped and mottled or blotched. They bloom late in the season and bear immense trusses, often five or six inches in diameter.

Portulaca,

PORTULACA. A small plant of great beauty, and of the easiest culture. Does best in a well exposed situation, where it has plenty of sun. The flowers are of various colors, from white to bright scarlet and crimson. The plant is good for edging vases or pots, or where large plants are kept in tubs, the surface can be filled with this neat little genus of plants. Half foot high. February till August.

PORTULACA GRANDIFLORA, fl. pl.—Double Portulaca. The same variety of colors with semi-double and double flowers; half foot high. February till August.

PRIMULA CHINENSIS—Chinese Primrose. A green-house plant which flowers profusely and continues to bloom for a long time; should be sown early to insure the plant flowering well. Different colors mixed; per package 25 cents. One and a half feet high. October till February.

Primula Veris.

PRIMULA VERIS—Cowslip. An herbaceous plant of various colors, highly esteemed in Europe. Half foot high. December till April.

PYRETHRUM AUREA—Golden Feather. The flowers resemble Asters. It has bright yellow leaves which make it very showy as a border massed with plants such as Coleus, etc.

Reseda Odorata.

RESEDA ODORATA GRANDIFLORA—Sweet Mignonette. A fragrant plant with large spikes of yellowish red flowers and a favorite with everybody. Fifteen inches high. December till April.

Scabiosa Nana.

SCABIOSA NANA—Dwarf Mourning Bride. Plant of double flowers of various colors. One foot high. December till April.

SAPONARIA CALABRICA—Soapwort. A very free flowering annual, of easy culture, resembles somewhat in leaves the Sweet William. One and a half feet high. December till April.

SALVIA SPLENDENS—Scarlet Salvia or Red Flowering Sage. A pot or green-house plant, but which can be grown as an annual, as it flowers freely from seed the first year. Two to three feet high. February till April.

SILENE AMERIA—Lobel's Catchfly. A free blooming plant of easy culture; flowers almost anywhere; red and white. One and a half feet high.

Tagetes Erecta.

TAGETES ERECTA—African or Tail Growing Marigold. Very showy annuals for borders, with bright yellow flowers growing upright. Two and a half feet high.

TAGETES PATULA—French or Dwarf Marigold. A very compact dwarf growing variety, covered with yellow and brown flowers. One and a half feet high. January till April.

Torenia Fournierii.

TORENIA FOURNIERII. A plant of Mexican introduction, which has become very popular. It stands the heat well, is well adapted to pot culture and makes one of the most valuable bedding plants we have. The flowers are of a sky blue color, with three spots of dark blue. The seeds are very fine and take a good while to germinate. It transplants very easy.

VERBENA CANDIDISSIMA—White Verbena. Pure white Verbena of more or less fragrance. One and a half feet high. January till April.

VERBENA STRIPED ITALIAN. These are beautiful striped kinds of all colors, with large eyes.

VERBENA HYBRIDA—Hybridized Verbena. A well known and favorite flower for borders. Their long flowering and great diversity of color make them valuable for every garden, however small. All colors mixed. One and a half feet high. January till April.

Hybridized Verbena.

VIOLA ODORATA—Sweet Violet. Well known edging plant, which generally is propagated by dividing the plants; but can also be raised from seed. Half foot high. Sow from January till March.

VIOLA TRICOLOR MAXIMA—Large flowering English Pansy. This is one of the finest little plants in cultivation for pots or the open ground. They are of endless colors and markings. When planted in the garden they will show better if planted in masses, and a little elevated above the level of the garden. Half foot high. October till March.

Vinca Rosea and Alba.

VINCA ROSEA AND ALBA—Red and White Periwinkle. Plants of shining foliage, with white and dark rose colored flowers, which are produced the whole summer and autumn. Two feet high. February till April.

CASSIER'S IMPROVED PANSY. A beautiful variety with large flowers of most compact growth. The flowers are generally five-spotted, but more distinctly marked than the Trimardeau. Price, 25c. per packet.

NON PLUS ULTRA—Benary's Elite Pansy. This variety from Germany is the finest of all pansies. Endowed with well formed flowers in endless colors and shades, they form a valuable acquisition to our many varieties in cultivation, and should not be missing in any garden. Price, 25c. per packet.

BUGNOT'S IMPROVED BLOTCHED PANSY. This variety is certainly the handsomest of all the pansies, and like the Odier's are five blotched, and generally yellow or white edged. The flowers are of the most perfect form and beautiful coloring. The variety is one of the best and forms a fine acquisition to our already large collection. Price, per packet 25 cents.

PANSY—Odier or Blotched. Superb, large-eyed flowers. Of very good shape and beautifully blotched with rich and varied colors. Packet, 25 cents.

Choicest Large English Pansy.

LARGE TRIMARDEAU PANSY. This is the largest variety in cultivation, the flowers are well formed, generally three spotted, quite distinct; the plants grow compact.

PANSY—Lord Beaconsfield. Large flowers, of deep purple violet, shading off in the top petals to a white hue. Packet, 25c.

ZINNIA ELEGANS, fl. pl.—Double Zinnia. Plants of very easy culture, flowering very profusely through the whole summer and fall; producing double flowers of all colors, almost as large as the flowers of a Dahlia. Three feet high. February till August.

ZINNIA ELEGANS PUMILA, fl. pl.—Dwarf Double mixed. A new dwarf selection especially desirable. The compact, bushy plants rarely grow over two feet high, and are covered with large flowers of great beauty.

ZINNIA ELEGANS GRANDIFLORA ROBUSTA PLENISSIMA. A variety introduced here from Germany. The plants of this class of showy and attractive annuals are of very robust growth and produce very large and extremely double flowers, measuring from four to five inches in diameter. The seeds we offer for sale come direct from the originator, and contain about eight beautiful different colors, mostly very bright.

STECKLER'S GIANT ZINNIA. This Zinnia is without doubt the largest and finest thus far introduced. It is a cross between the Elegans pumila, fl. pl., and the Elegans grandiflora robusta varieties. The flowers measure from tip to tip fully $6\frac{1}{2}$ inches; half early, semi-high and perfectly double. Each package contains a fine selection of beautiful colors. 15c. per packet.

Climbing Plants.

These Seeds are all put up in 5c. and 10c. Packages.

ANTIGONUM LEPTOPUS—Rosa Montana. Mountain Vine. One of the finest perennial climbers of rapid growth with long racemes of beautiful deep pink flowers. Being a native of Mexico, it is well adapted to our climate and will stand our most severe winters without any further protection than perhaps a slight cover of moss or straw. Sow in February or March in flower pots, and transplant into the open ground in May. Will flower freely the first year. Without any doubt the finest climber for this section.

ARISTOLOCHIA ELEGANS. A variety of the well known "Dutchman's Pipe," of vigorous growth and quite hardy in our climate. It is a profuse bloomer, bearing large flowers of a rich purple color with irregular branched markings of creamy white and golden yellow center with rich velvety purple. This plant is one of the most thankful of all climbers, blooming when quite young and continuing to do so the whole summer. Will stand our winter without protection. Sow in January and February in flower pots and transplant in open ground when large enough.

BENINCASA CERIFERA—Wax Gourd. A strong growing vine with long shaped, dark crimson fruit, which looks very ornamental. It is used for preserves.

CARDIOSPERMUM—Balloon Vine. A quick growing climber, the seeds of which are in a pod, shaped like a miniature balloon, therefore the name.

COBÆA SCANDENS—Climbing Cobæa. Large purple bell-shaped flowers. Should be sown in a hot-bed and not kept too moist. Place the seed edge-wise in the ground. Twenty feet high. January till April.

CONVOLVULUS MAJOR—Morning Glory. A well known vine with various handsomely colored flowers of easy culture. Grows almost anywhere. Ten feet high. February till July.

CUCURBITA—Ornamental Gourd. Mixed varieties of Ornamental Gourds of different shapes and sizes. February till May.

CUCURBITA LAGENARIA DULCIS—Sweet Gourd. A strong growing vine of which the young fruits are used like squash. February till April.

DOLICHOS LABLAB—Hyacinth Beans. Free growing plant, with purple and white flowers. March till April.

IPOMÆA BONA NOX—Large Flowering Evening Glory. A vine of rapid growth with beautiful white flowers which open in the evening. Twenty feet high. February till June.

IPOMÆA QUAMOCLIT ROSEA—Red Cypress Vine. Very beautiful, delicate foliage of rapid growth with scarlet star-shaped flowers.

IPOMÆA QUAMOCLIT ALBA—White Cypress Vine. The same as the Red variety.

IPOMÆA LAERI—The Blue Moonflower. This distinct and charming novelty is valuable on account of being in beautiful and striking contrast with the true White Moonflower.

MAURANDIA BARCLAYANA—Mixed Maurandia. A slender growing vine of rapid growth. Rose, purple and white colors mixed. Ten feet high. February till April.

MAMORDICA BALSAMINA—Balsam Apple. A climbing plant of very rapid growth, producing Cucumber-like fruits, with warts on them. They are believed to contain medicinal virtues. They are put in jars with alcohol and are used as a dressing for cuts, bruises, etc. February till July.

Sweet Peas.

LATHYRUS ODORATUS—Sweet Peas. Beautiful flowers of all colors, very showy. Good for cut flowers. December till April. We handle two varieties, mixed and white.

Mina Lobata.

MINA LOBATA. A showy plant from Mexico of the well known Ipomæa family, with beautiful spikes or racemes of yellowish white flowers. February till July.

LUFFA ACUTANGULA—Dish Rag Vine. A very rapid growing vine of the Gourd family. When the fruit is dry, the fibrous substance, which covers the seeds, can be used as a dish rag. February till July.

THUNBERGIA—Mixed Thunbergia. Very ornamental vines, with yellow, bell-shaped flowers with dark eye. Six feet high. February till July.

GIANT IMPERIAL JAPANESE MORNING GLORY. This is a type of the well known Morning Glory. The vines are of robust growth, attaining a height of from 30 to 40 feet. The foliage varies greatly, some plants having yellow or silvery foliage, while others are blotched and mottled; but the great charm of this wonderful introduction lies in the great beauty and gigantic size of the flowers, which often measure six inches across, and their great substance causes them to remain much longer in perfection than the ordinary type. February till July.

WISTARIA. This is one of the most popular of our hardy vines, growing rapid, in bloom is truly magnificent, bearing long, pendulous clusters of blue flowers; growing to a height of fifty feet or more.

Giant Imperial Japanese Morning Glory.

Bulbous Roots.

THESE PRICES DO NOT INCLUDE POSTAGE OR EXPRESSAGE.

- Anemones.

ANEMONES—Double Flowering. Planted and treated the same as the Ranunculus. They are of great varieties in color. Double Dutch, 30 cents per dozen, \$1.50 per 100.

NEW OXALIS BUTTERCUP. This neat little plant should not be missing in any collection of pot plants. Although it is not directly a pot, but a bor-

der plant, but it is so well adapted to pot culture and will grow especially well in a hanging vase or hanging basket, that it may well be classed among the pot plants. Its hanging habit and bright golden yellow flowers make it especially attractive. Being of an easy culture it is a good acquisition to our collection of bulbous plants; 40c. per dozen.

Crocus.

CROCUS. Handsome little, bulbous plant, producing an abundance of various colored flowers, growing to a height of from 6 to 8 inches. Excellent to border off Hyacinth or Tulip beds. Per dozen, 25c.; per 100, \$1.50.

DAHLIAS. Fine double varieties. Plants so well known for their brilliancy, diversity of colors and profuse flowering qualities that they require no recommendation. They can be planted from February till May. \$2.25 per dozen; 20c. each.

Freesia Refracta.

FREESIA REFRACTA. An excellent bulbous rooted plant for florists use. The tubular flowers are used for fine floral work, and for such are even superior to Roman Hyacinths. The plant is quite hardy in our climate, as well adapted for out of doors as for pot culture; 25c. per dozen. September till March.

Gloxinias.

GLOXINIAS. These are really bulbous greenhouse plants, but they can be cultivated in pots and kept in a shady place in the garden or window. They are very beautiful; color from white to dark violet and crimson. French Hybrids, strong bulbs, 20 cents each; \$2.00 per dozen.

Hybrid Gladiolus.

GLADIOLUS—Hybrid Gladiolus. One of the best summer flowering bulbs; they have been greatly improved, and almost every color has been produced, tinged and blotched in all shades from delicate rose to dark vermilion. The roots should be taken up in the fall. Hybrids mixed, first choice (extra), 5c. each, 50 cents per dozen. Hybrids, white ground, first choice, 5 cents each; 50 cents per dozen. Hybrids mixed, 5 cents each; 40 cents per dozen.

Roman Hyacinth.

HYACINTHS—(Roman). White. For florists' use Roman Hyacinths are of great value, blossoming at the time when flowers, even in our Southern climate, are very scarce. The bulbs will produce from two to five spikes of flowers, and may be forced so far as to have them bloom early and from then until flowers out of doors are plentiful. Price, each 5c., per dozen 50 cents.

Frotscher's Large Purple or New Orleans Market Eggplants.

Dutch Hyacinth (Double.)

HYACINTHS (Dutch)—Double and Single. The Hyacinth is a beautiful flowering bulb, in all colors, well suited for open ground or pot culture. They should be planted from October till February. If planted in pots it is well to keep in a cool, rather dark place, till they are well started, when they can be placed in the full light and sun. Double and single 5c. each; 55c. per dozen.

Double Jonquil.

JONQUILLS. Very popular flowers on account of their easy cultivation and delightful fragrance, golden yellow blooms. They can be readily forced in the house, or planted in the open ground for early flowering.

Single. Rich yellow; perianth deeply lobed.

Double. Full, double, golden yellow.

Campernelle. True large flowering variety.

Campernelle Rugulosus. The largest flowering Jonquil. Pure yellow and very fragrant. Very desirable for winter flowering: 5c. each; 40c. per dozen, all the above or assorted.

Von Sion Narcissus.

NARCISSUS. Bulbs of the easiest culture, planted from November to February.

Paper White Grandiflora. An improved flowering form of the Paper White and now the principal forcing variety. The flowers are very beautiful, and emit a delicious odor. Very useful for bouquets. Price 5c. each; 40c. per dozen.

Trumpet Major. The most popular forcing sort, deep yellow. Price 5c. each; 40c. per dozen.

Double Von Sion. The popular double yellow Daffodil, in great demand for forcing and growing in pots or pans for Easter sales. Pure golden yellow stock. Price 5c. each; 40c. per dozen.

Giant Princep. Pale sulphur perianth trumpet, rich yellow, very showy, grand variety for florists. They begin to bloom about the middle of February and last for a whole month. They produce beautiful flowers with long stems and very desirable for our southern country. 40c. per dozen.

RANUNCULUS—French Double. The roots can be planted during fall and winter either in the open ground or in pots. The French varieties are more robust than the Persian, and the flowers are larger. The ground should be rather dry, and if planted in open ground it will be well to have the spot a little higher than the bed or border. 25c. per dozen.

TUBEROSES—Double Flowering. They are ornamental for the garden and very valuable for making bouquets on account of their pure white color and great fragrance. Plant during the spring months. Strong bulbs, 5 cents each; 40 cents per dozen.

Chinese Sacred Lily.

CHINESE SACRED LILY. This is not, properly speaking, a Lily, but a Narcissus, with pure white flowers similar to the Paper White. Some years ago the bulbs of this variety were brought here by Chinamen and grown in dishes filled with pebbles and water where they bloomed to perfection, hence the name "Chinese Lily." The word sacred has been added since, as it was supposed that this Narcissus was held sacred by the Chinese in their native country. The plant is of an easy culture and will bloom well if grown in dishes filled with water. 10c. each. September till March.

Calla Aethiopica.

CALLA AETHIOPICA—Lily of the Nile. As a winter blooming bulbous rooted pot plant there is

hardly anything to come up to the beautiful Calla Lily. The plant, which is of an easy culture, will bloom in the green-house as well as in a room near the window, or even on the veranda, as long as it is kept frost free. It may also be grown in a fish-pond or tank in a green-house and produce its large pure white flowers. Bulbs should be potted in the month of October, November, December and January, and may be had to bloom from Christmas to March; 20c. each; \$2.00 per dozen.

BLACK CALLA LILY—*Arum Sanctum*. A handsome pot plant, producing a flower similar in shape to the White Calla Lily, *Calla Aethiopica*, but of a dark purplish maroon color. This plant is of an easy culture, requiring the same treatment as the White Calla, and blooms equally as freely. Price per bulb, 25c.; per dozen, \$2.00. January till March.

SPOTTED CALLA. Leaves dark, rich green exquisitely dotted with white marks. Ornamental even when not in flower. Beautiful white flowers with deep black throat; 25c. each. January till March.

Double Tulip.

TULIPS—Double and Single. Should not be planted later than February, and placed very shallow in the ground; not more than one-third of the bulb should be covered. When near flowering they require a good deal of moisture. 50c. per dozen. September to March.

Scilla Peruviana.

SCILLA PERUVIANA. These are green house bulbs at the North, but here they are hardy and do

well in the open ground. There are two varieties, the blue and the white. They throw up a shoot,

on the end of which the flowers appear, forming a truss. Plant from October till March; 20c. each.

Japan Lilies.

Liliun Auratum.

LILIUM AURATUM—Golden Band Lily. This is a very handsome lily; the flowers are large and white, each petal having a yellow stripe. It is of easy culture. A loamy, dry soil suits it best, if planted one inch deep. We have seen these noble lilies bloom, and they were really fine; half a dozen flowers opening at the same time and measuring from six to nine inches across. Very fragrant. We have fine bulbs, imported direct from their native country. Flowering bulbs, 20c. each. February till March.

Liliun Trigrinum.

LILIUM LANCIFOLIUM ALBUM. Pure white Japan Lily. 25c. each. December till March.

LILIUM LANCIFOLIUM RUBRUM. White and red spotted; 15 cents each. December till March.

LILIUM LANCIFOLIUM ROSEUM. Rose spotted; 15 cents each. These Japan Lilies are very beautiful and fragrant. Should be planted from December till March. Perfectly suited to this climate.

LILIUM TIGRINUM, fl. pl. This is a very fine variety; it is perfectly double, and the petals are imbricated almost as regular as a camelia flower. Very fine. 15c. each; \$1.50 per dozen. December till March.

LILIUM TIGRINUM. Same as above, only single. 15c. each; \$1.50 per dozen. December till March.

Bermuda Easter Lily.

LILIUM HARRISSII, OR BERMUDA EASTER LILY. This handsome white Lily is similar in shape to our St. Joseph's Lily, except that the tube is a little shorter and the outside petals a little more recurved. Excellent for forcing and principally adapted for church decorations. 15c. each; \$1.50 per doz. September till March.

LILIUM LONGIFLORUM. The old St. Joseph Lily. This variety, an old stand-by with us, is so well known here that it requires no further description. The long white tubes generally open shortly after Easter and are often used for church decoration on Corpus Christi and St. Joseph's day, hence the name St. Joseph Lily. 15c. each; \$1.50 per dozen. December till March.

Lilium Speciosum Rubrum.

LILIUM SPECIOSUM RUBRUM. White, beautifully spotted red; flowers in August. This is one of the most useful of the Lily family, perfectly hardy, and flowering well under all circumstances. 25c. each. December till March.

ORNITHOGALUM UMBELLATUM, OR STAR OF BETHLEHEM. Outside green and white striped, inside satiny white; flowers in umbels; very showy; 20c. each; \$1.25 per dozen. September till March.

AMARYLLIS JOHNSONI—Spice Lily. Very large; exceedingly beautiful flower, crimson striped white. Each 25c. September till March.

AMARYLLIS—Hippeastrum. Splendid flowering bulbs, suitable for greenhouses, room or garden cultivation.

FORMOSISSIMA—Jacoboen Lily. Crimson blooming early in the summer; 15c. each; \$1.50 per dozen. Plant from September till March.

SPANISH IRIS—Fleur-de-lis. Mixed. The colors comprise yellows, purples, blues, claret red, white and bronze, marbled, veined and striped in bewildering beauty; 25c. dozen, 2 for 5c. September till March.

ROSES.

SEASON 1911.

TO LOVERS OF THE CHOICEST ROSES:

From a thorough practical experience and knowledge of the Rose and its requirements we have selected only the choicest varieties, freedom of bloom, size, color, vigor, form and substance of each variety considered. Propagated and grown at our nursery and thoroughly acclimated, our smaller size Roses are grown in pots, which gives more satisfaction, being more adapted to the usual handling in packing, shipping and planting on arrival. We also grow a great number in open ground, which gives a large size plant for those who want immediate effect. We do not grow any plants for their flowers especially, thereby assuring you good stock. The so-called one and two year old plants which are advertised and catalogued as good stock having been worked and forced for their flowers, are worthless in any garden. Our Field Roses are all lifted and established in pots and hardened before shipping, thereby insuring perfect success, and to reduce charged soil is removed to some extent.

DIRECTIONS FOR PLANTING.—See that your ground is well loosened and fertilized before planting your roses. Press the soil firmly around the plants with your foot and do not plant them too deep, just a trifle, perhaps, deeper than they were in the pots and water well after planting.

While we are prepared to fill all orders for field grown Roses at any time, we advise our patrons to reserve their orders until November 1st, as this will give them an opportunity to become better matured, and can be transplanted to better advantage.

FORMULA FOR DISEASE OF BLIGHT ON ROSE BUSHES.— $\frac{1}{2}$ ounce sulphate of copper, $\frac{1}{4}$ ounces ammonia. Dilute in 5 gallons of water and spray the plants once a week for about 4 weeks. For insects use tobacco water. We find this to be a safe remedy.

We strongly advise shipping by Express whenever practicable, this will enable us to send much stronger plants and guarantee safer delivery. If ordered by mail add 20 per cent. of the value of plants to cover postage.

SELECT NEW VARIETIES.

FREIHERR VON MARSHALL. As an outdoor bedding rose it has no superior. The flowers are large, beautifully shaped, double and full, borne in great profusion all through the growing season. One of the brightest red tea roses in existence. Be sure to try it.

WM. SHEAN. The double Killarney, very large pointed buds. Color grand.

MRS. THEO. ROOSEVELT. Double cream, profuse bloomer; flowers large and full.

HELEN GOOD. A sport from Maman Cochet, delicate yellow suffused with pink, each petal edged deeper. A good garden rose

PRESIDENT TAFT. Shining, intense deep pink, good size and form; free bloomer. Color possessed by no other rose. The most remarkable of all pink roses.

MME. E. SABLAYROLLES. Clear yellow without, interior golden orange. Flowers enormously large, extremely double fine long buds.

OLIVIER. Deep rose color, strong free grower, resembling Balduin in color.

PIUS X. Flowers large and cupped in form, creamy white passing to tender rose, very free and fragrant.

DEAN HOLE. An intense salmon pink, with bud of extraordinary length opening into a mammoth bloom of splendid substance.

Flowering Annuals to be had in their planting season.

WM. R. SMITH. As a summer bedder will rank with the two Cochet's, produces immense quantities of fine flowers of creamy white, with pink shadings. The strongest growing of all the summer bedders.

RHEA REID. Seedling from American Beauty. A free strong grower, double crimson scarlet flowers.

MRS. BENJ. R. CANT. Clear bright rosy pink, large size, double and full. The most vigorous of all tea roses. Blooms the entire season; we highly recommend it.

THE BABY RAMBLER. (Mme. Norbert Levavasseur). Is a cross between Crimson Rambler and one of the dwarf Polyanthes sorts, producing large trusses of bright crimson flowers similar to Crimson Rambler, making dwarf compact bushes not over 18 inches high.

THE WHITE BABY RAMBLER. (Catherine Zeimet.) Produces double white flowers in abundance, of free compact growth.

ETOILE DE FRANCE. Color a lovely shade of clear red crimson velvet. Very fragrant and keeps well. It is a good grower and a free bloomer, deliciously fragrant.

Prices, 25c. and 50c. each. Stronger plants, 75c. each.

We strongly advise shipping by Express whenever practicable; this will enable us to send much stronger plants and guarantee safer delivery. If ordered by mail add 20 per cent. of the value of plants to cover postage.

CHOICE EVERBLOOMING VARIETIES.

ARCHDUKE CHARLES. Also called Confederate rose. Opens bright red changing to silvery pink.

ANTOINE RIVOIRE. Creamy white, delicate pink tinge, resembles a Camelia flower. A grand rose.

BESSIE BROWN. Color pure white, sometimes feintly finished pink. It is erect and vigorous in growth. Flower very large.

BEAUTY OF STAPLEFORD. Rosy crimson shading to pink.

BON SILENE. Deep rose, sometimes bright rosy crimson.

BRIDE. The well known white rose, habit of growth good, freedom of bloom unexcelled.

BRIDESMAID. A grand pink rose for all purposes. Especially good for cut blooms.

CROWN PRINCESS VICTORIA. Also called White Malmaison. A very vigorous growing and free blooming rose.

CATHERINE MERMET. A good grower and one of the best of the pink roses.

CHAMPION OF THE WORLD. Pink; an improved Hermosa.

Wm. R. Smith.

CLOTHILDE SOUPERT. Variable from pure white to pink. Flowers are produced in profusion.

DUCHESS OF ALBANY. Lovely shade of deep rose.

DUCHESS DE BRABANT. Everybody's favorite. No Southern garden should be without it. Color a lovely shade of light rose shading to salmon.

EMPRESS EUGENIE. One of the sweetest of all pink roses, strong robust grower and prolific bloomer.

ETOILE DE LYON. A good yellow rose, free bloomer.

GOLDEN GATE. Flowers shell pink shading to creamy flesh; beautiful buds.

GENERAL DE TARTAS. Light red, a constant bloomer; fine for cut flowers. Of vigorous growth.

HELEN GOULD OR BALDUIN. Large handsome foliage, rosy crimson flowers of the largest size. Long pointed buds and vigorous. Be sure to try this rose.

ISABELLA SPRUNT. Clear lemon yellow, pretty buds, free bloomer and good grower.

Madame Lombard.

KAISERIN AUGUSTA VICTORIA. Pure white, extra fine.

LA FRANCE. Delicate silvery rose color, shaded with pink.

LA FRANCE STRIPED. Same as above except the color is pink with light stripes.

LOUIS PHILIPPE. Brilliant fiery red, the best red bedding rose; very sweet.

MADAME LOMBARD. A beautiful shade of red-dish bronze, passing to salmon fawn. A very strong grower and good bloomer.

MADAME DE VATRY. Rich red changing to silvery peach. An old rose of merit.

MADAME E. DURANTHON. This is a very unique colored rose, produces a distinct globe shaped bloom. It is indeed a beauty. Don't fail to try it.

MAMAN COCHET. Pink, deserves to rank as the best in its color, the flowers are large and full. Strong stems and fine foliage. One of the very best roses. Don't fail to try it.

MAMAN COCHET. White. Same as preceding except color is pure white.

MADAME CAROLINE KUSTER. Long buds, light yellow. A strong grower and free bloomer.

MADAME FRANCISKA KRUGER. Deep coppery yellow, shaded to rose. A splendid sort.

MAD. JOSEPH SCHWARTZ. Sometimes called white Duchess de Brabant, similar except in color, which is white flushed with pink.

MARIE GUILLOT. Pure ivory white.

MARIE LOUISE. Profuse bloomer, color light blush. An excellent bedding rose; free bloomer.

MARIE VAN HOUTTE. A beautiful pale canary yellow edged with rose. A strong vigorous grower.

METEOR. A deep velvety crimson, constant bloomer and thrifty grower.

MONTHLY CABBAGE. A lovely pink rose, similar to Archduke Charles.

PAPA GONTIER. Carmine, flushed crimson. Produces beautiful buds very freely.

SAFRANO. Saffron yellow with orange. Grandmother's favorite; elegant buds.

SOMBRIEUL OR CAMELIA. White tinged delicate rose, very vigorous grower.

SOUV. DE LA MALMAISON. Flesh color, cup-shaped, full to the center. An old favorite, still one of the best garden roses.

SOUV. DE PRESIDENT CARNOT. A grand rose. A beautiful light fawn color; very free flowering.

SOUV. DE PIERRE NOTTING. Creamy yellow, shaded light peach.

MADAME CAMILLE. Rosy blush, with salmon shades.

MADAME SCHWALLER. Bright pink, delightfully fragrant.

MADAM WELCHE. Amber yellow with crimson rose center.

Maman Cochet White.

THE QUEEN. Beautiful long snow white buds.

TRIOMPHE DE PERNET PERE. Magenta red, passing to rich crimson.

Prices: 4 inch pots, 20c. each, \$2.00 per dozen. Stronger plants, 30c. each, \$3.00 per dozen. Strong field grown plants, 40c. and 50c. each, \$4.00 and \$5.00 per dozen.

We strongly advise shipping by Express whenever practicable; this will enable us to send much stronger plants and guarantee safer delivery. If ordered by mail add 20 per cent. of the value of plants to cover postage.

CLIMBING ROSES.

AGLAIA. (Yellow Rambler). This comes next to Crimson Rambler for beauty. It is a hardy climbing yellow rose.

CHROMATELLA, OR CLOTH OF GOLD. Clear golden yellow.

CLIMBING DEVONIENSIS. Pink.

CLIMBING MALMAISON. A lovely flesh color. Strong grower.

CLIMBING METEOR. Rich velvety crimson. Extra fine; hardy.

CLIMBING PAUL NEYRON. (Madame Wagner). Large pink flowers of magnificent satin rose color. Extremely beautiful.

CLIMBING WOOTON. Deep, rich red, fragrant.

CRIMSON RAMBLER. Bright scarlet in immense panicles of fifty or more blooms. Magnificent and hardy.

LADY BANKS. Yellow and white.

LAMARQUE. Pale canary yellow, almost white.

JAMES SPRUNT. Crimson.

MADAME ISAAC PERRIER. Crimson.

MARECHAL NEIL. Everybody's favorite, deep golden yellow. Best yellow rose.

MRS. ROBT. PEARY, OR CLIMBING KAISERIN. The greatest of all climbing hardy roses.

Largest size buds and flowers of pure white. This is a grand rose.

PINK RAMBLER. Deep, rich pink, very handsome; hardy.

PILLAR OF GOLD. Color rosy-pink, base of petals yellow; a free bloomer and an extra fine rose in every detail.

PRESIDENT CLEVELAND. (Climbing Marie Guillot.) The Queen of White Roses. It is one of the most rapid growing and vigorous climbing roses we have ever seen. It blooms continuously throughout the season. The flowers are magnificently made, extra large, deep and double.

REINE MARIE HENRIETTE. Cherry red, sweetscented. A general favorite.

REVE D'OR. Buff yellow; good.

SOLFATERRE. Fine clear sulphur yellow.

STRIPED REINE MARIE HENRIETTE. A sport from the old favorite, R. M. Henrietta, has the splendid vigorous climbing habit of the mother rose.

while beautifully striped, flamed and shaded in light carmine over pale rose.

W. A. RICHARDSON. Orange yellow. Coppery shades.

WHITE RAMBLER. Pure white, an elegant rose. Hardy.

ZELIA PRADEL. Pure white, full and sweet.

Prices, 4 inch pots, 20c. each, \$2.00 per dozen; 30c. each, \$3.00 per dozen. Extra strong field grown plants, 40c. each, \$4.00 per dozen; 50c. each, \$5.00 per dozen.

Extra strong climbing roses, 75c., \$1.00 and \$1.50 each.

We also have extra strong grafted Marechal Neils, \$1.00, \$1.50 and \$2.00 each.

We strongly advise shipping by Express whenever practicable; this will enable us to send much stronger plants and guarantee safer delivery. If ordered by mail add 20 per cent. of the value of plants to cover postage.

HYBRID PERPETUALS.

AMERICAN BEAUTY. A universally admired red rose.

BALL OF SNOW. White.

BLACK PRINCE. Deep crimson.

CAPTAIN CHRISTY. Pale peach, deepening at center to rosy crimson.

COQUETTE DES BLANCHES. Pure snow white, sometimes feintly tinged with rose.

DINSMORE. Deep cherry color and very fragrant.

FRAU KARL DRUSCHKI. One of the grandest of the white roses. A very vigorous grower.

GEN. JACQUEMINOT. Bright shining crimson, very rich and velvety.

GIANT OF BATTLES. Crimson.

JNÖ. HOPPER. Brilliant rose changing to bright glowing pink.

LA REINE. Clear bright rose.

MADAME MASSON. Large, full, double flowers of unusual beauty and wonderful fragrance; clear bright rose.

MAGNA CHARTA. Pink.

PAUL NEYRON. Deep shining rose, very large.

PIERRE NOTTING. Very dark, blackish red, shaded violet crimson.

Prices, 25c. each, \$2.50 per dozen, 50c. each, \$5.00 per dozen. Extra strong field grown, 75c. and \$1.00.

We strongly advise shipping by Express whenever practicable; this will enable us to send much stronger plants and guarantee safer delivery. If ordered by mail add 20 per cent. of the value of plants to cover postage.

PLANT DEPARTMENT.

We strongly advise shipping by Express whenever practicable; this will enable us to send much stronger plants and guarantee safer delivery.

Abutilon.

ABUTILON. Singularly beautiful flowering Mimosas and worthy a place in any garden, producing their flowers in great abundance the entire year, beginning to bloom when quite small. Ours include the best varieties. Price, 15c. each; \$1.50 per dozen. Larger plants 25c. and 50c. each. We have a good collection.

ALTERNANTHERA. Splendid for bedding or bordering; Grows very compact, and so well known that a description is superfluous. Red and yellow 5 cents each; 40c. per dozen, \$2.50 per 100.

ALOYSIA CITRIODORA—Lemon Verbena. This plant has the most fragrance of any grown. One plant will scent a whole garden, the fragrance is that of the lemon, really exquisite. 15, 25 and 50 cents each.

AGAVA AMERICANA. Century plant, green; 25 cents, 50 cents and \$1.00 each.

AGAVA AMERICANA. Variegated; 50c. and \$1.00 each.

AMAGLYPTUS. A pretty purple leaved plant of trailing habit. Fine for baskets or as a cover plant; 15 and 25 cents.

ACALYPHA. — Showy class of foliage plants that are becoming very popular for ornamental and sub-tropical bedding. The colors are as bright as in the best of the Coleus and the plants are much harder and not so liable to wilt in the hottest and driest weather.

Marginata. Fine large foliage, dark olive, margined rose. A very desirable variety, standing upright in hot and dry weather.

M a c a f e n a. A grand foliage plant with bright orange red leaves, very showy. Prices, 10 to 20 cents each; \$1.00 and \$2.00 per dozen.

Acalypha Sanderii.

Sanderii—The most sensational introduction of the Century—Under a variety of names this remarkable plant has been praised by experts the world over. It has been called the "Phillippine Medusa," "Dewey's Favorite Plant," "Chenille Plant," "Blazing Cat Tail" and many other names of similar character. We know of no plant so unique and sensational in appearance. It is an absolutely new departure, totally unlike any other plant now known. It is an extraordinary free grower and bloomer, small plants blooming from January to December. As an ornamental plant, it is the most striking ever seen. Of branching habit, the branches spread widely and throw out their long, dazzling crimson, fluffy spikes 12 to 18 inches long between the large, bright green leaves, in the most effective manner. Strong plants, 25 and 50 cents each.

ASPIDISTRA. Tough, hardy foliage plants, suitable for house decoration or the garden.

Lurida—Beautiful dark green, price 25 and 50 cents. Extra strong plants, \$1.00 each.

Lurida—Variegated. Dark green, handsomely margined yellow and white, 50 and 75 cents and \$1.00.

ASPARAGUS—Sprengeri. A beautiful new variety of this graceful class of plants, especially useful to grow as a pot plant for house decoration, or planting in hanging baskets, where it makes a graceful drooping plant with branches or fronds 4 to 5 feet in length, of a rich shade of green. 10, 25, 50 and 75 cents. Extra large plants, \$1.00 and \$2.00.

Plumosus and **Plumosus Nanus**. An excellent plant for window culture, the lace like texture of its foliage excelling that of Maiden Hair Fern in grace and daintiness. It is fine as a pot plant, and in floral decoration the sprays are almost indispensable. It can also be trained as a climber for arbors, trellises, etc. 15 cents each, larger plants, 30, 50 and 75 cents: Extra large plants, \$1.50.

AZALEA INDICA—Chinese Azalea. Our stock of these useful plants is exceptionally fine, every plant being a perfect specimen.

We offer a grand list of standard varieties embracing all shades of white, pink, crimson and rose col-

Azalea Indica.

ored, as well as variegated pink and white, and rose and white. No plant yet introduced gives better satisfaction for winter and early spring flowering in the house. Name the color or shade desired and we will not fail to please you. Price, well budded, 10 inch crowns, \$1.50; 12 inch crowns, \$1.75; 14 inch crowns, \$2.00; 16 inch crowns, \$2.50; 20 inch crowns, \$3.00.

Araucaria Excelsa.

ARAUCARIA EXCELSA—Norfolk Island Pine. This noble conifer has succeeded in South Florida, and may be considered hardy in sections where the winter temperature does not fall below 25 degrees Fahr. There are few trees as beautiful. Foliage bright green and dense, and slightly pendulous branches, grows to a great height, but is at its best when of moderate size. 12 inches high, \$1.00; 15 inches, \$1.50; 18 inches, \$2.50; 24 inches, \$4.00. **Araucaria Robusta Compacta**, 12 inches, \$2.00; 18 inches, \$3.50; 24 inches, \$5.00. **Excelsa Glauca**, 12 inches, \$2.00; 18 inches, \$3.50; 24 inches, \$5.00.

BOUGAINVILLEA GLABRA SANDERIANA—Chinese Paper Plant. A beautiful free flowering plant, strong growing and beginning to bloom when quite small. Flowers produced in bracts of a brilliant crimson rose color with yellow stamens. Destined to become very popular and yet quite new in the South. Very adaptable for green-house, conservatory or garden. Price, strong plants, 50c. each. Specimens \$1.00 and \$2.00 each.

Begonia Rex.

BEGONIA REX. These handsome foliage plants far out-show all others, their lustrous tints, making irregular blotches and shades of color combination, classes them amongst the very finest of plants. They delight in a warm shady place; when watering avoid wetting the leaves; a rich sandy soil is their delight. Try them and see their comforting variations of color. Price, 15 and 25 cents each; extra specimens, 50 and 75 cents each.

Flowering Begonia.

FLOWERING BEGONIAS. The Begonia is today the most popular house plant, and deservedly so, for there is nothing that gives such a magnificent display of bloom all through the year, or grows as well as in the average dwelling house.

President Carnot—A strong growing variety, of stiff, upright habit; foliage large, somewhat in style with *B. Rubra*, but more than twice as large; upper side deep green, under side purplish red; flowers beautiful coral in large pendant panicles.

Rubra—This Begonia is still a great favorite. The flowers are rich coral red, hanging in large pendant clusters; these combined with the rich green foliage, make it one of the best plants for the house.

M. de Lesseps—A very showy grower, large darkened leaves, with silvery spots; it blooms in clusters, flowers white.

Fairy—A nice glossy leaf of medium growth, a profuse bloomer producing a mass of white flowers.

Thurstoni—This Begonia is admired above many, having large glossy dark red leaves and blooms very freely, bearing light pink flowers.

Sanguinea—One of the hardiest; pink flowers produced in great abundance.

Argentea Guttata—A handsome foliage variety, purple bronze leaves, oblong in shape, with silvery marking, with white flowers. An excellent pot plant.

Alba Picta—Leaves glossy green, thickly spotted with silvery white; flower white.

Gracillus Luminosa (New)—Always in bloom, very showy and robust, the flowers when first open are a bright Cherry red changing to a clear coral red.

Price, 15c. each; \$1.50 per dozen; larger plants 25c. each.

President Taft (New)—Pink; flowers as large as a silver dollar. \$1.00 each.

The well known varieties *Vernon red* and *Erfordii* pink well adapted for planting out in the garden in slightly shaded places. Price, 10c. each; \$1.00 per dozen.

BEGONIA GLOIRE DE LORRAINE. The very finest Begonia for winter blooming. There is no doubt of its superiority over all others, of quite recent introduction and has created a sensation wherever seen. Destined to become the most popular of its entire family, beginning to bloom in very small sized plant, and continuing a perfect mass of beauty its entire life. Clean, vigorous plants, 50c., 75c. and \$1.00.

BANANA PLANTS. Tall, 50 cents and \$1.00 each. This variety is very easily kept over winter in a warm cellar; cut off all the leaves and keep dry. For tropical effect this variety is superb.

CHRYSANTHEMUMS.

We grow only the best varieties and take great pride and care in their cultivation, always adding the best of the new introductions as soon as proved worthy. We are prepared to supply the popular early varieties generally used for All Saint's Day in quantities, such as *Mrs. H. Robinson*, *Mrs. Bassett*, *Honesty*, *H. Cannell*, *Monrovia* and *Col. Appleton*. When ordering state whether you wish early or late flowering kinds. If selection is left to us will give you a good assortment of various colors.

CULTURAL DIRECTIONS FOR CHRYSANTHEMUMS.

When to Plant—Any time after the ground can be worked up to July 1st will give you good blooming plants in the fall.

Soil—Dig the ground deep, mix a quantity of well rotted manure or bone meal with the soil, as the Chrysanthemum is a gross feeder, if fed well the flowers will be large and the plant strong.

Disbudding, Stopping and Tying—When your plant is 8 inches high cut back to 6 inches, allow your shoots to grow from the main trunk. Repeat this operation if you want many flowers, but if you desire to grow large blooms let only two or three shoots grow, removing all others. As the shoots lengthen tie each one separately to a stake to insure straight stems. Disbudding means to remove all the buds save one. With most varieties it is safer to remove the first bud, which usually appears during June or July, the next shoot developing will produce what is called a terminal bud, and it gives as a rule, with few exceptions, the best flower. Any shoots appearing from the roots and the side of the stems must be carefully removed in order to concentrate all the strength in the flower.

Feeding—The application of stimulants requires careful consideration, the safest plan is to steep fresh cow manure in water and applying the clear liquid diluted to the color of weak tea. Discontinue feeding after the buds begin to show color.

WHITE.

Mrs. H. Robinson—One of our best white. Can be depended on for blooming November 1st; very double and of easy growth.

Convention Hall—Pure white, center petals incurving.

October Frost—Take early bud, otherwise will show open centre; one of the earliest in white.

Miss Alice Byron—One of the grandest white introduced for some time, and the purest in color of any we grow.

Virginia Poehlman—Almost pure white, good size, incurved full petals overlying each other making a perfect bloom. Price 25 cents.

Timothy Eaton—Very large flower on stiff stem. Take first or second crown for best results.

Ben Wells—Bluish white; produces a very fine flower. Price, 25 cents.

Honesty—Pure white, narrow petals, very pretty flower, can be had in bloom latter part of October; of easy growth.

Yanoma—A good late white. Can be had as late as Christmas.

PINK.

Wm. Duckham—A very large Japanese incurved, of a pleasing shade of pink.

Dr. Enguehard—One of the best varieties of recent introduction. Pure pink without a trace of purple, of easy growth.

Mrs. Coombs—Bright rose color; blooms early.

Mrs. Mary Mann—Fine shade of rose pink; good stem and foliage.

M. L. Rousseau—Enormous incurving pink; a grand flower. Price, 25 cents.

YELLOW.

Monrovia—The best early yellow, grand stem and foliage and splendid shade of yellow.

Gen. Hutton—Yellow, shaded orange; always a prize winner, enormous flower. A very fine sort; 25 cents.

Mrs. P. O. Bassett (Yellow Mrs. Robinson)—A fine lemon yellow; blooms same time as Mrs. Robinson.

Golden Wedding—Nothing finer among yellows; shines like burnished gold.

Col. Appleton—Golden yellow, produced on stiff stems; fine foliage; a fine variety.

Major Bonnaillon—This splendid yellow is grown in large quantity by some growers.

Edgar Sanders—A beautiful bronze, of large size; 25 cents.

Golden Eagle (New)—This variety has taken first rank among the late golden yellows. A dwarf grower of easy management. 25 cents.

Golden Age—Bright yellow, slightly reflexed; a monster flower and of easy growth; ranks with the best.

Buff Globe—Buff, shaded orange; large blossoms.

H. Cannell—A good early variety of a clear yellow.

RED.

Geo. W. Childs—The best known of the reds and gold varieties. Easily injured by over-feeding. Also good for bush plants.

Black Hawk—Dark crimson scarlet; style of V. Morel. Long strap petals, irregularly arranged. Best from terminal bud. An extra fine red for all purposes.

Intensity—Reflexed bright crimson, very free.

Red Duckham—Like Wm. Duckham, except in color.

We also handle many of the well-known older varieties, not listed here and are prepared to fill all orders for same.

All the above, except where otherwise noted, 10 cents each; \$1.00 per dozen until July 1st; after that date 25 cents to 50 cents each.

CANNAS.

King Humbert—In this grand new Italian Canna we have a combination of the highest type of flower with the finest bronze foliage. Its flowers, which under ordinary cultivation, will measure six inches in diameter, and which are produced in heavy trusses of gigantic size, are of a brilliant orange-scarlet with bright red markings; while the foliage is broad and massive and of a rich coppery bronze with brownish green markings, bold and effective; 5 feet.

Mrs. Kate Gray—The most robust growing Canna in our collection, with broad and massive foliage of a bright glossy green, and forming a beautiful foil to the gigantic trusses of flowers, which are of a rich shade of orange-scarlet overlaid with gold, and measures from 6 to 7 inches across.

Mlle. Berat—This is a pink variety of French origin. Entirely distinct from any other sort. It is much the darkest of all the king Cannas, being dark carmine-red. Heads of bloom are held very erect and well above the foliage. A showy, effective bedder. One of the finest introductions.

President McKinley—Color, fiery crimson-scarlet. An early, constant and profuse bloomer. Dwarf habit, stools freely, making a valuable bedder; height, 2½ feet.

Queen Charlotte—Rich crimson, with a broad margin of yellow. Although old, it is still considered one of the best of its color.

Alphonse Bouvier—Bright crimson flowers in large, full spikes; height 5 feet. One of the best crimson bedders.

Black Beauty—The darkest and most handsome colored foliage of any Canna. Unequalled for center of groups; 5 to 7 feet high.

Mme. Crozy—Scarlet bordered with golden yellow. Height, 2½ feet. One of the most popular varieties.

Pennsylvania—One of the best of the Italian hybrids with flowers 6½ inches in diameter, produced with remarkable freedom in many branched panicles and of an intense vermilion scarlet overlaid with an orange scarlet sheen. Rich, massive, deep green foliage, 6 to 7 feet.

Florence Vaughan—Rich golden yellow, thickly spotted with red. One of the finest variegated varieties.

All the above Cannas 25 cents each, \$2.00 per dozen.

COLEUS. Fancy varieties, 10c. each, 75c. per dozen, \$4.00 per 100. Standard varieties, 5c. each, 50c. per dozen, \$3.00 per 100.

COLEUS—CHRISTMAS GEM (New.) Has broad leaves that often measure 8 inches across, beautifully marked with yellow and bright crimson. 10c. each. Specimens 25 and 50 cents each.

CACTUS—Crab Claw—A beautiful red flowering variety, usually grafted on the Snake Cactus. Makes pretty specimens in a short while with ordinary care. 50c., 75c. and \$1.00 each.

We also have a number of other varieties of Cactus, from 25 cents up.

CROTONS—Splendid pot plants for the piazza or window garden. Leaves are brilliantly variegated in every color of the rainbow, and present a fine appearance. A grand bedding plant, standing the hottest sunshine, which adds great brilliancy to their colors. A plant that is sure to please every one. We offer strong plants 15c. each, \$1.50 per dozen; larger sizes, 25c., 50c. and \$1.00 each.

Calla Aethiopica.

CALLA AETHIOPICA. Easy of culture, freedom of bloom and beauty of flower have made these lilies almost indispensable; 40 and 50 cents each.

Carnation.

CARNATIONS. There is no sweeter flower than the Carnation, and they are without question the best of all plants for winter blooming. We have a good collection of the very choicest kinds in various shades of red, pink and white, and know you will not be disappointed in getting these varieties. They are large plants, ready to begin blooming at once. Many of them will be in bud when we send them to you. 25c. each, \$2.50 per dozen. Young plants, ready from February 1st, 15c. each; \$1.50 per dozen.

CARNATIONS—Marguerite. Seedlings, 10c. each \$1.00 per dozen. Ready from January 1st.

Caladium, Fancy-Leaved.

CALADIUM, FANCY-LEAVED. Especially desirable for green-house or window culture or for out of doors decorative effect. Easily grown, thriving in pot or box or in shady situation in garden or lawn. The root should be set in fairly enriched sandy loam. If grown in open air the bulb should be dried off in October and kept warm and dry during winter. There is a wide range of color and markings, the handsome leaves being spotted and

variegated with white, pink, scarlet, etc. We have the choicest strain of this fancy-leaved caladium, 30 cents each; \$3.00 per dozen.

CALADIUM ESCULENTUM—Elephant's Ears. A handsome plant of tropical aspect, bearing leaves sometimes a yard or more in expanse. Effective as a single plant on a lawn, or in groups; also useful for decorative effect near streams or ponds. Bulbs can be stored in dry sand in winter and kept from year to year. Desirable and widely popular; 25c. each.

CALADIUM. Dark leaved, similar to the above, except leaves are smaller. Thrives well in partly shaded situations. 15c. each.

CISSUS DISCOLOR. A beautiful climbing plant, also called Trailing Begonia. Velvety green, mottled with white, under surface of leaf reddish purple. 25 and 50 cents each.

CLERODENDRON BALFOURI. A fine plant for either pot culture or beddings, very showy. 25 and 50 cents each.

Camelia Japonica.

CAMELIA JAPONICA. The royal family of plants. Leaves glossy and the flowers of the most exquisite beauty and waxy texture. From pure white to crimson, in almost endless variegation. The pure white ones are generally prized above the colored varieties. Their culture is nearly related to that of the Azalea, but their success is more certain. Requires shade and moisture throughout the hot season. Their time of blooming is winter and early spring. Requires a moderate and uniform temperature with as little artificial heat as possible. When set with flower beds great care must be taken in watering—when left too dry the buds are sure to drop. Prices, strong bushy plants, 6 inch pots, \$1.50; 7 inch pots, \$2.00 and \$2.50. Larger plants, prices on application.

CUPHEA PLATYCEMDRE—Also called Ladies Cigar Plant. A free flowering shrub, always in bloom. Also suitable for cutting; of the easiest culture. 25 and 50 cents each.

CYPERUS ALTERNIFOLIUS—Umbrella Plant. This is a plant of the easiest culture and a large specimen is as handsome as a Palm for decoration. It makes a handsome pot plant. It will grow luxuriantly in winter, and is therefore indispensable for aquariums or fountains. Try it. Prices 15 and 25 cents each.

DRACENAS. We have a very fine collection of this ornamental foliage plant consisting of many beautiful and new varieties. Prices, 50 cents, \$1.00 and \$2.00. We have small *Dracena Terminalis*, red leaved variety, 25c. each.

EUPHORBIA SPLENDENS OR CROWN OF THORNS. A free flowering plant of the easiest culture. Price, 15 and 25 cents each.

FICUS REPEHS. A plant suited especially for covering the walls, pillars, etc., or outside decorations in the South, as it clings to stone or wood work with the greatest tenacity; 15c. each; \$1.50 per dozen. Stronger plants, 25c. each, \$2.50 per dozen.

FICUS PANDURATA. The new Rubber plant, quite distinct from the old variety. The leaves are

very large and the mid-ribs are well defined; it is well suited for house decoration. We have a nice stock of this scarce plant at prices ranging from 75c. to \$5.00 each.

Fuchsia.

FUCHSIA. We have these in various colors, white, red, purple and intermediate shades. A good collection. Prices, 15 and 25 cents.

Ficus Elastica Belgica.

FICUS ELASTICA. India Rubber Plant. A most hardy decorative house plant. Our stock is very large, and we recommend them to you as strictly first class properly grown stock, which will endure the ordinary house culture far better than when ordinarily grown. Thick, healthy, well-colored leaves. Price, strong, healthy, well-shaped plants, 8 to 10 inches high, 25c.; 15 to 18 inches high, 50c.; 18 to 24 inches high, 75c.; 24 to 30 inches high, \$1.00; extra large specimens, \$2.00 and \$2.50.

GERANIUMS.

Geraniums.

E. H. Trego. In this fine new Geranium we have by far the best of all double scarlet geraniums, both as a bedder and pot plant. The flowers are large, semi-double, borne in immense heads held on stiff stalks high above the foliage. The color is dazzling scarlet. It will produce 50 per cent. more flowers in a pot than any other Geranium grown. Therefore, to those who grow Geraniums, it is indispensable.

Alphonse Ricard—A strong grower, dwarf and branching and producing flowers in great masses. Both floret and truss are of enormous size, single, or slightly doubled, and color a brilliant shade of orange red.

Beaute Poitevine—Semi-double. Enormous flowers, aurora pink, shading to bright salmon center. The grandest of all the light fancy Bruants.

Marquis Castellane—A shapely dwarf grower, with immense flowers about 2½ inches in diameter. Two beautiful shades of red; petals undulating on the edges; very fine and distinct. This magnificent new red variety ranked as high as *Viaud* in the open ground, which is the highest praise we can give it as a bedder. We predict that this variety will become as popular as *A. Ricard*, and is a distinct and lovely color, besides blooming freely in winter.

S. A. Nutt—The very best of the dark crimson-scarlet bedders. Always in heavy demand. We have a very large stock of it. Stands the sun perfectly, and is always a mass of bloom.

Mme. Jaulin—Semi-double. Very large florets compose a truss of grand size; center, tender pink, surrounded by border of white. For freshness and beauty this color is without a parallel among outdoor bedding varieties, and is equally fine as a pot specimen.

Mme. Landry—Double. One of the choicest and most beautiful of Bruants. Very free and constant in bloom throughout the season. Trusses large and florets of the finest size and circular in form. Color, clear salmon, center shading to copper, with a white eye. Very distinct.

Mrs. E. G. Hill—Single. Floret, 2½x2 inches. The center of each petal is a soft, light salmon, bordered with rosy salmon and veined deep rose. Frequently throws six petals.

Jacquerie—One of the largest of florets, longer than wide; very velvety in texture, and a magnificent shade of very dark crimson scarlet. One of the finest of single geraniums; always in heavy demand; 25c. each.

La Favorite—Still a standard sort among double whites.

Mme. Charlotte—Distinct pure salmon, occasionally veined with white. Semi-double Bruant. A decided improvement on *Beaute Poitevine*, both in color and growth.

M. A. Ricard—Clear orange red; Bruant type. Free flowering. Dwarf, sturdy habit. As a bedder it is unsurpassed.

Jean Viaud—Semi-double Bruant. Color, a beautiful shade of bright rose which does not fade in the hottest weather. Extra strong grower. The best pink bedder.

John Doyle—A very free, semi-double, bright scarlet. Dwarf, robust grower. As a pot plant it ranks as one of the best.

Mme. Buchner—Double white. More vigorous constitution than *La Favorite*.

Secretair de Chatenay—The darkest red in the market, dwarf grower.

Double Gen. Grant—Semi-double, clear orange scarlet. An old, well-known variety, probably more used for bedding than any other variety in commerce.

Duc De Montemort—Deep brilliant carmine-purple, one of the most novel and striking shades yet seen; a profuse bloomer; foliage deeply zoned. Exceptionally novel.

Richmond Beauty—Brilliant scarlet crimson, with large white feather on the two upper petals; the finest bedder; single Geranium, 25 cents.

Double Dryden—A fancy variety with most beautiful arrangement of colors. Delicate pink, shading out to glowing crimson. 25 cents.

Nuit Poitevine—Rosy purple with maroon shading, lower petals clear, the upper scarlet at the base. 25 cents each.

Berthe de Pressilly—Flowers large silvery rose color. Most beautiful shade.

Kleber—Deep violet of velvety texture; a free grower and very free in bloom. 25 cents.

Triomphe de Nancy—Semi-double carmine red, with white markings. Large trusses of immense florets. 25 cents.

Francis Perkins—In our estimation this is one of the best double pink bedding Geraniums. The plant is an extra strong, vigorous grower, throwing out tall spikes of well-formed flowers of a bright pink color. For massing there is no pink variety that equals it.

Grand Single Geranium, "Telegraph"—The most distinct introduction in this line for many years; a variety that has been thoroughly tested and which is certain to be classed at once with the very best standard sorts, either as a pot plant or for bedding. It is a strong robust grower with dark green foliage and heavy zone, while both the individual flowers and the trusses are of mammoth size. In color it is a most pleasing rich deep orange cerise.

Bruanti—Clear orange scarlet. A very good bedder.

Prices, 10c. each, \$1.00 per dozen; 15c. each, \$1.50 per dozen; 5 inch pots, 25c. each; excepting where noted.

Ivy Geraniums—A good collection. Prices, 15c. each; \$1.50 per dozen, and 25c. each; \$2.50 per dozen.

Geranium Pelargonium. (Lady Washington.) We have a good collection of these fine pot plants in large variety; 25 and 50 cents.

Scented Geraniums—Rose, everybody likes it, 10 to 25 cents each. Nutmeg and Apple scented, 15 to 25 cents each.

GREVILLEA ROBUSTA—Australian Silk Oak. A magnificent plant for decorative purposes, of rapid easy growth; cut foliage rivaling a rare fern. 25c. each. Large plants 75c. and \$1.00.

HELIOTROPE. Light and dark. Of these popular fragrant blooming plants we have selected those which are most adaptable to our Southern climate, size of flower, color and fragrance our standpoint in selection. Price, 10 and 25 cents each.

HYDRANGEA. Beautiful blooming plant, adapted rather to shady location. The large clusters of flowers resemble the snow ball, only being much larger.

Otaksa Monstrosa—A very beautiful variety from Japan, giving large clusters of bluish pink flowers in great abundance through the season; the flowers are very persistent, lasting two or three months.

Thomas Hogg—This is the finest of all Hydrangeas. It is a more free and abundant bloomer than any other; for the florists and all decorative purposes it will be invaluable. The flowers are all the purest white, of very fine texture, and continue to flower for a great length of time; quite hardy in open ground.

Prices, 25c., 50c. and \$1.00 each.

Snowball—New Hardy Hydrangea—(Arborescens alba grandiflora). This magnificent hardy American shrub is the very finest addition to this class of plants found in many a year. The blooms are of the very largest size, of pure snow-white color. It comes into bloom just after the passing of the early spring flowering shrubs, and is perfectly hardy. 50 cents and \$1.00 each.

HIBISCUS SJNENSIS. This plant rivals the geranium in popularity. A very good way to make them bloom freely and facilitate the lifting in fall is to transplant each plant into a pot two or three sizes larger than the one it has grown in, then plunge the pot altogether into the ground, the soil to cover over the surface two inches. Then in the fall the plant can be lifted without injury, and being transplanted again, and kept in a shady, cool place until fully recovered, it will, in a warm sunny window, in a warm room, bloom constantly. We can supply them in either colors of crimson, red, pink, yellow and salmon. Price, 15c. to 25c. each; large plants, 50c. to \$1.00 each.

WATER HYACINTHS. Easily grown, floats on water by means of curious inflated leaves; a mass of feathery blue roots growing downward into the water. The flowers are as large as a silver dollar, and are borne on spikes 6 to 8 inches long, resembling hyacinths, and are as handsome as an orchid; of a beautiful sparkling, rosy-lilac color. Prices, single plant by mail, 20c.; by express, 4 for 50c.; 9 for \$1.00, or \$1.25 per dozen; \$5.00 per 100.

Hydrangea.

Hibiscus Sinensis.

JASMINS.

Jasminum Grandiflorum or *Gracilis*—This is an old favorite and the most satisfactory for general culture of all the Jasmies. It flowers nearly the whole season, and is especially valuable as a house plant in winter; flowers star-shaped, pure white and very fragrant; 20 and 50 cents each.

Maid of Orleans or Arabian—Large double waxy-white flowers of great substance, produced freely throughout the summer. We know of no pot plant more desirable than this; the fragrance of the flower is delicious, sweet and elegant. Prices, 15, 25, 50 and 75 cents each.

Grand Duke of Tuscany—A magnificent ever-blooming plant with large double, waxy creamy white flowers, with the most delicious fragrance of any flower we know, sweeter than a Tube-rose; looks like a large, double, white Rose. Blooms throughout the season. A superb pot plant of dwarf, sturdy habit of growth. Prices, 15, 25, 50 and 75 cents each.

Gardenia Florida (Cape Jessamine)—Nothing finer for conservatory or open ground wherever hardy. Its double pure white flowers are delightfully fragrant, while its deep green glossy foliage adds materially to its beauty; 25, 50 and 75 cents each. Extra strong, \$1.00 and \$1.50 each.

Cestrum Nocturnum (Night Blooming Jasmine)—Free blooming shrub, very fragrant at night; 15, 25 and 50 cents each.

Cestrum Diurnum (Day Blooming Jasmine)—15, 25 and 50 cents each.

Jasminum Revolutum—Yellow flowered hardy Jasmine; 25 and 50 cents each.

Jasmine (Confederate or Mayalan)—A strong climbing variety, dark green waxy leaves with flowers very fragrant; one of the hardiest; 25 and 50 cents.

Jasminum Primulinum—Of recent introduction; hardy, large yellow flowers; young plants, 25c. each; larger, 50c. each.

LANTANAS (Weeping). Very rapid grower and very showy, being covered with lavender blooms the year round; 15c. each, \$1.50 per dozen. Larger plants, 25c. each; \$2.50 per dozen.

LANTANAS. A good collection, including yellow, pink, orange and white; 10c. each, \$1.00 per dozen. Larger plants, 25c. each; \$2.50 per dozen.

LYGODIUM SCANDENS (The Climbing Fern). Has dainty lace-like foliage, is of rapid growth and very pretty; 15c. to 50c. each.

MOSCHASMA RIPARIUM (The Musk Plant). The leaves emit a delightful odor, and the flowers are produced in winter if kept warm. It is of very easy culture and does not seem to be troubled with any insect pests. Young plants, 25c. each; larger plants, 50c. and \$1.00 each.

MYOSOTIS OR FORGET-ME-NOT. Blue; an old favorite, always in bloom. 10c. each. Strong clumps, 25c. each.

OLEANDERS. Nothing nicer for porch or lawn decoration. Give good rich soil and plenty of moisture during growing season. May be wintered over in any cellar where it does not freeze. White, pink and rose; 25c., 50c. and \$1.00 each.

PARIS DAISIES (French Marguerites). A beautiful plant of easy culture, and one that generally gives best satisfaction; flowers white and yellow, 1½ to 2 inches in diameter. Price, 10c. each; \$1.00 per dozen; large plants, 25c. each.

NEW DAISY (Queen Alexandria). Double white, a grand variety; 15c. and 25c.

NEPETA VARIEGATA (Variegated Ground Ivy). The foliage of this charming novelty is a bright green marked with pure white. Has a refreshing fragrance similar to mint. 10c. each; large plants, 25c.

Pandanus Veitchi.

PANDANUS VEITCHI (Variegated Screw Pine). The aristocrat of fancy-leaved decorative plants. We have them in sizes ranging from 6 inches to 4 feet. Strong, healthy, highly colored, and well grown. Their adaptability to ordinary house culture has won for them great favor. Foliage a beautiful green, variegated and striped white. Prices range from 25c., 50c., \$1.00 to \$3.00 each.

PANDANUS UTILIS. Another of the grand decorative plants. Its dark bronzy green foliage, gracefully arranged, renders it most attractive. Suitable for center of vases and baskets, or as a single specimen; 25c., 50c., \$1.00 and \$2.00 each.

PANDANUS SANDERI. The inner leaves are of a deep yellow, outer leaves light green, making a beautiful contrast. Prices, 25c., 50c. and \$1.00 each.

PAMPAS GRASS (*Gynerium*). Very ornamental grass, beautiful plumes; 25c. to 50c. each.

PETUNIAS (Double). In all colors; 15 and 25 cents each.

PARROTS FEATHER. Fine plant for hanging Aquariums. 15c. each.

PHLOX (Perennial). A collection embracing every color from purest white to darkest crimson; 15 cents each; \$1.50 per dozen.

Steckler's Blue Perennial Phlox—Used very largely for border plants; 10c. each, 75c. per dozen, \$4.00 per 100.

PILEA. Fine for pot plants; of easy growth; 10c. each.

PLUMBAGO (Capensis). A plant worthy of more general cultivation; producing large trusses of delicate azure flowers. Excellent for bedding out in summer, or growing in pots for single specimen plants; 15, 25 and 50 cents each.

Capensis Alba—Equally as desirable as Plumbago Capensis, and identical in every respect but color, which in this vicinity is beautiful creamy white; 15, 25 and 50 cents each.

PRIMULA (Chinese Primrose). Splendid winter blooming plants, doing well in cool rooms. Colors include white, rose, blue, crimson and other shades; flowers variously cut and fringed. Prices, 25 and 50 cents.

PRIMULA OBCONICA. A lovely perpetual blooming primrose, and admirably adapted to growing in a cool room. The flowers are not large, but are profusely borne in loose trusses, and are of a delicate rosy lilac, shading to white, and possess the true primrose fragrance. 25 to 50 cents.

Poinsettia Pulcherrima.

POINSETTIA PULCHERRIMA. A tropical plant of gorgeous beauty, the bracts of leaves that surround the flower being in well-grown specimens one foot in diameter and of the most dazzling scarlet; 25c., 50c., \$1.00 and \$2.00 each.

RUDBECKIA (Golden Glow). Grows 8 feet high, branching freely and bearing by the hundreds, on long graceful stems; exquisite double flowers of the

Swainsonia or Swinflower.

brightest golden color and as large as a Cactus Dahlia. As cut flowers the blooms last well. Perfectly hardy and blooms continuously throughout the summer months. Strong plants, 15c. each; larger plants, 30c.

RUSSELLIA. A most useful basket or vase plant, producing numerous long, wiry stems, which are virtually leafless. Upon these stems and branches the flowers are borne, which are about one inch long, tubular and brilliant scarlet color, and are produced in the greatest freedom; 15 and 25 cents each.

SWAINSONIA OR SWANFLOWER. A Superb Ever-blooming Pplant. Just imagine a plant that is fully as pretty as a Fern bearing the utmost profusion of flowers in elegant sprays of 30 or 40 flowers each, which in form and fragrance are equal to Sweet Peas, which it strongly resembles. You can then form an idea of the Swainsonia. Of vigorous healthy habit of growth; it blooms the year round.

Alba (White)—Magnificent large satiny-white flowers just like Sweet Peas. When you see them you will agree with us that they are simply exquisite.

Splendens (Pink)—An exceedingly rare and beautiful variety, identical with Alba, except the flowers, which are a deep shiny pink. The contrast between the two varieties is strikingly beautiful. Be sure to try both. Strong plants, prices, 15, 25 and 50 cents each.

SANSEVIERA ZEYLANICA. A decorative plant of great beauty and value. A beautiful plant, splendidly adapted for the decoration of drawing-rooms or halls, as it stands drought and dust with impunity, and requires scarcely any water. The leaves grow to a length of three or four feet, and are beautifully striped cross-wise with broad, white variegations on a dark green ground. It is difficult to find a more unique or ornamental plant than this, especially when it is in bloom; 25 and 50 cents each.

SAXIFRAGE SARMENTOSA—(Beefsteak Plant). Fine for hanging baskets and partly shady locations. 15 and 25 cents each.

Strobilanthus Dyerianus.

STROBILANTHUS DYERIANUS. An excellent bedding plant as well as a beautiful foliage plant for pot culture, it forms a compact bush 18 inches high, with leaves 6 to 9 inches long; of a beautiful metallic purple, shading into light rose, with a light green

margin, a combination unapproached by any other plant. The flowers are violet blue, borne in immense racemes; 15 to 25 cents.

SALVIA SPLENDENS—Bon Fire and Silver Spot. This magnificent scarlet sage or salvia has three times the flowering capacity of ordinary scarlet sages. The flowers are produced so abundantly as to bend the branches and suggest the name, Drooping Spikes for this superb type. It is altogether attractive and showy and one of the best for decorative purposes, whether used singly or in mixed groups. The plant blazes out in dazzling scarlet and the color lasts all summer and fall. Price, 10 and 15 cents each.

SALVIA PATENS. A hardy free flowering light blue variety, fine for cut flowers. 10 and 15 cents each.

Tritoma Pfitzerii.

TRITOMA PFITZERII—Red Hot Poker Plant. The greatest bedding plant ever introduced, surpassing the finest Cannas for attractiveness and brilliancy, showy as the Gladiolus as a cut flower, and blooms incessantly from June until November. Plants perfectly hardy with protection. Plants show from 6 to 20 grand flower stalks all the time, each holding, at a height of 3 to 4 feet, a great cluster of flame-colored flowers of indescribable beauty and brilliancy. Each cluster keeps perfect several weeks, and when it fades two or three more are ready to take its place. For cutting it is unsurpassed, as the beautiful long spikes keep several weeks in water. Strong plants that will bloom the first summer. Each 30c.; 4 for \$1.00.

VIOLETS.

The California—This splendid single violet has a flower much larger than any other in cultivation. Violet-purple in color; delightful fragrance; 10 cents; 75 cents per dozen.

Lady Hume Campbell—A vigorous variety, blooming with extraordinary freedom. Large double flowers, of azure blue; richly perfumed; 10 cents each, 75 cents per dozen.

Swanley's White Violet.

Swanley's White—Perfectly double, pure white flowers of fine size and rich fragrance. By far the best of all white Violets in freedom of bloom; 10c. each, 75c. per dozen.

Marie Louise—The well-known lavender blue; 10c. each; 75c. per dozen.

Giant—Large dark purple violet of great substance; 3c. each, 30c. a dozen; \$1.50 a hundred; large clumps, 25c. each.

VERBENAS. We offer the most distinct varieties of these useful bedding plants. All are of the mammoth or large-flowering type. The colors range through all the different shades of scarlet, purple, crimson, pink, blue, white, etc.; mixed seedlings, 3c. each, 50c. per dozen; pot grown to color, 10c. each, 75c. per dozen.

FINE FERNS.

Choice varieties of special merit, particular attention is given these little plant pets, and we take great pride in growing them to the best treatment possible. We offer them to you in first-class condition.

We have one greenhouse devoted specially to the growing of Ferns, and have the most popular varieties by the hundred, especially Maiden Hair and Boston Ferns.

Australian Tree Fern.

ALSOPHILA AUSTRALIS (Australian Tree Fern). A rapid-growing fern with finely divided fronds, of a pleasing shade of light green, thickly covered with light brown hairs. Do not let it get too dry at the roots. 50c., 75c. and \$1.00 each.

NEPHROLEPSIS ELEGANTISSEMA — Tarrytown Fern. This is a "sport" from the Piersonii, in which the plumpy peculiarity of the original form is even more distinctly developed, the side pinnae being again subdivided and standing at right angles to the midrib, making both sides of the frond equally beautiful, while at the same time the plant is of much more compact habit, growing only one-half as tall, but with fronds nearly twice as wide, making it a much more desirable plant for all purposes. 25c., 50c., 75c. and \$1.00; extra large specimens, \$2.00, \$3.00 and \$5.00.

Tarrytown Fern.

BOSTON FERNS. A large stock in various sizes; 25, 35, 50 cents and \$1.00. Extra large, \$1.50 and \$2.00.

NEPHROLEPSIS AMERPOHLI (or Baby Breath Fern). The latest novelty; the foliage is finely divided and very graceful in appearance. It is indeed a beauty. 25c., 50c., 75c. and \$1.00.

Nephrolepis Scotti.

NEPHROLEPSIS SCOTTI (Dwarf, Compact Boston Fern.) This is a sport from the well-known Boston Fern, and is a novelty that will commend itself to the trade. It is quite distinct from the Boston Fern, the fronds being shorter and narrower, and they are much more freely produced, making a very compact, finished plant, particularly in the small sizes. Prices, 25c., 50c., 75c. and \$1.00.

NEPHROLEPSIS DAVOLIODES FURCANS — Fish Tail Fern. 25c., 50c., 75c., \$1.00, \$1.50 and \$2.50.

NEPHROLEPSIS PIERSONII — Ostrich Plume Fern. 25c., 50c., 75c., \$1.00 and \$1.50 each.

NEPHROLEPSIS CORDATA COMPACTA. Compact Sword Fern, adaptable for hanging baskets. 25 and 50 cents. Extra large, \$1.00 and \$1.50.

NEPHROLEPSIS WHITMANII — Philadelphia Lace Fern. The most graceful of all the Nephrolepsis; very choice; 25c., 50c., 75c. and \$1.50 each.

THE FOLLOWING STANDARD VARIETIES. 25c., 50c., \$1.00, \$1.50 and \$2.00.

Adiantum Cuneatum.

Adiantum—Cuneatum. Maiden Hair Fern.

Adiantum—Farleyense. The finest of the Maiden Hair family, 50c. up.

Adiantum—Hybridum.

Adiantum—Capillus Veneris. Dwarf, hardy.

HARDY FERNS for house culture or making up fern dishes, a good collection. 15c. each; \$1.50 per dozen.

RESURRECTION PLANT — Selaginella. Two varieties from Mexico. Very peculiar; when dry it can be laid away for several months, but at any time when placed in a dish of water, it will revive, open out and look like a beautiful fern. If planted in a moist, shady place, it will grow nicely, 25c. each.

SELAGINELLA KRAUSSIANA. A fine creeping sort, admirable for covering soil in tubs, for baskets or rockwork. 15 cts. to 25 cts.

SELAGINELLA UNCINATA. Rainbow moss. A creeping species, the fronds showing peacock blue, bronze tints. Fine for edging or baskets. 15 cts. to 25 cts.

SELAGINELLA EMILIANA. A new upright growing moss with numerous feathery stems branching from the base, forming a dense tuft. 15 and 25 cents.

HANGING BASKETS. Our baskets are well established, and will greatly enhance the beauty of your residence. They are filled with Asparagus and Boston Ferns, but we can make them of assorted plants and ferns as desired. 8 inch, \$1.00; 10 inch, \$1.50; 12 inch, \$2.00 to \$3.00 each.

CLIMBERS.

AMPELOPSIS VEITCHII (Boston or Japanese Ivy). A most satisfactory and beautiful climber; it is entirely hardy, and can adapt itself to any locality or exposure; clings fast to stone, brick or wooden walls, and is extensively used on residences, churches, factories, etc., where in summer it covers all with a perfect mat of dark green leathery foliage, which changes as autumn approaches to brilliant crimson; the foliage serves as a great protection to buildings, the leaves lapping over like tiles on a roof, preventing effectually the rain from penetrating the walls. Strong field grown plants, 25c. and 50c. each.

ANTIGONUM LEPTOPUS (The Mountain Beauty or Rosa Montana). A handsome climber of Mexican origin. It is quite hardy where strong roots are deeply planted. Flowers of a bright rose color, borne in graceful racemes or clusters, with tendrils at the end of the racemes. Outside of flower rose color; centre of a much deeper tint. To insure early flowering procure strong plants, then plant deeply in good, well-drained soil. 15c. each; blooming size, 25 and 50 cents.

ARISTOLOCHIA ELEGANS. A variety of the well-known "Dutchman's Pipe," of vigorous growth and quite hardy in our climate. Strong plants, 25c. and 50c. each.

BIGNONIA (Trumpet Creeper). One of our handsomest hardy perennials, bearing large clusters of orange red flowers freely during summer, and always attracting numbers of humming birds. Mostly grown on trees or walls, though it can be cut back and restrained. Usual height, ten to thirty feet. Prices, 35, 50, 75 cents and \$1.00.

BIGNONIA TWEEDIANA. A very well-known vine producing yellow flowers; will make a good specimen plant in a large pot. Try it. 25 and 50 cents each.

BIGNONIA LAURIFOLIA. Evergreen, glossy foliage, lavender flowers; finest vine for the veranda, not subject to insect pests. 25, 50 and 75 cents.

FINE HARDY CLEMATIS. Those who have seen the magnificent masses of exquisite flowers produced by Jackmani and other choice varieties of English Clematis, do not need to be told that these Clematis are undoubtedly the most beautiful of all flowering vines. The flowers are grandly beautiful and of very large size, often measuring from 4 to 6 inches in diameter, and are borne in gorgeous wreaths and clusters of bloom that hang in graceful

festoons from the vine during July and August. We offer strong plants of their own roots, superior to grafted plants.

Jackmani—Rubra Red flowering.

Jackmani—Purple, immense flowers.

Henryii—Immense pure white flowers.

The Gem—Deep lavender, very striking; \$1.00 each.

Paniculata—One of the most beautiful of our hardy flowering vines. The flowers are pure white, and are borne in great panicles or clusters of bloom, fairly covering the plants so that it is a mass or sheet of fleecy white. Strong field-grown plants, flowering size, 50 and 75 cents each.

IPOMEA PANDURATA. Flower rose pink, deepening to purple in the throat; will grow anywhere. The plant is beautiful when in flower. 25c. each.

IPOMEA MAXIMA (Moonflower). Large flowering evening glory, a great grower of wonderfully immense white flowers measuring 5 to 6 inches in diameter. Price, 15c. each.

IPOMEA LEARI (The Blue Moonflower). This distinct and charming novelty is valuable on account of being in beautiful and striking contrast with the true White Moonflower (described above); habit of growth and flowering the same. The color is exquisite clear satiny blue, with well-defined crimson bars; very distinct. We recommend planting the Blue Moonflower with the White one (Ipomea Maxima), as the effect will be novel spring and summer; leaves beautifully marked and variegated. 15 and 25 cents each.

IVY (Hardy English). An evergreen vine suitable for covering unsightly objects. 25 and 50 cents each.

LONICERA (Honeysuckle; Aurea reticulata). Golden netted; a remarkable variety; leaves bright green, beautifully netted all over with golden veins, leaves and stems changing to bright crimson in the autumn; a beautiful plant. 35 to 50 cents each.

Belgica—Pink flowers; very sweet, profuse, and an almost perpetual bloomer. Can also be trained as a bush. Small plants ready in March. Strong plants 35 and 50 cents each.

Chinese Sweet Scented Honey-Suckle—A fine variety of vigorous growth, white and yellow flowers; a very fragrant and constant bloomer; 25 and 50 cents each.

MADEIRA VINE. A half hardy, well adaptable climber in our Southern garden, wonderfully prolific in blooming qualities, flowers very fragrant. White,

foliage olive green. One plant will cover 20 cubic feet of space in early season. Dormant bulbs, 10 cents each.

MANETTIA VINE. One of the most handsome and desirable of all climbing vines, either for house or garden. A free and continuous bloomer, completely filled at all times with small tubular flowers of brilliant scarlet, shading into yellow at the tips. Especially desirable for baskets, vases or trellises. 15 to 25 cents each.

SOLANUM SEAFORTHIANUM—Blue Solanum. An excellent climbing plant, one that can be used to good effect as a pot plant in the house or for summer planting in the garden. The flowers are bright lilac blue, produced in large pendulous clusters. 15, 25 and 50 cents each.

SOLANUM JASMINOIDES. A hardy vine producing white flowers with yellow stamens; a strong growing variety. 15, 25 and 50 cents each.

SOLANUM WENDTLANDII. Immense panicles of lilac flowers produced in great abundance; it is a very desirable vine. 25 and 50 cents each.

TRADESCANTIA—Wandering Jew. Fine for hanging baskets. 10c. each.

VINCA MAJOR VARIEGATA—Variegated Periwinkle. Can be trained either as a climber, trailer or hanging vine. Major Variegata—A rapid grower; leaves glossy green, marked with white. Combination beautiful. 15 and 25 cents each.

WISTARIAS. For training over buildings, piazzas, verandas or trellises, the Wistaria is of superior excellence, and decorative features which their long, graceful blossoms afford make a particularly pleasing effect. They are entirely hardy, rapid growers and easy of cultivation. They may be trained to a shrub form of habit by paying attention to pruning, by cutting away the new growth for several seasons.

Chinese Blue—One of the most beautiful of all Wistarias; a vigorous, strong growing vine, producing in early summer a great profusion of large clusters of lovely, rich, violet blue flowers, deliciously sweet and exceedingly handsome.

Light Blue—Very fast grower; blooms several times during the season.

First size, 35 cents; larger, 50 cents. Extra heavy plants, 75 cents each.

Chinese White—Same as Chinese Blue, only difference being in color; 50c. to \$1.00 each.

OUR LEADING SPECIALTY IN PLANTS.

PALMS.

Kentia.

Areca.

Phœnix.

Latania.

We call special attention to our stock of Palms, which is the largest and most complete in the South.

ARECA LUTESCENS. 25, 50, 75 cents, \$1.50, \$2.00 and \$3.50 each.

CHAMEROPS EXCELSA. The hardiest palm of all. \$1.00, \$1.50 and \$3.00 each.

COCUS PLUMOSA. \$1.00, \$2.00 and \$3.00.

COCUS WEDDELIANA. The finest table palm. 50c., \$1.00, \$2.00 and \$3.00.

CYCAS REVOLUTA—Sago Palm. The Cycas makes a magnificent specimen plant, and is one of the most valuable plants grown for the decoration of the lawn or house. Their heavy, deep green fronds resist alike dust, gas and cold to which decorative plants are often exposed. Fine shapely plants. Price, 50c., 75c., \$1.00, \$1.50 and \$2.00; extra large specimens, \$3.00 to \$5.00 each.

KENTIA BELMOREANA. Four inch pot, 50c. each; 5 inch pot, \$1.00 each; 6 inch pot, \$1.50 each; 7 inch pot, \$2.50 each; extra large specimens, \$3.00 and \$4.00 each.

KENTIA FORSTERIANA. Prices same as Kentia Belmoreana.

LATANIA BORBONICA—African Fan Palm. Three inch pots, 25c.; 4 inch pots 50c. each; 5 inch pots, 75c. each; 6 inch pots, \$1.25 each; 7 inch pots, \$2.00 each; extra fine plants, large, \$3.00 to \$5.00 each.

LIVISTONIA ROTUNDIFOLIA. A very pretty dwarf growing palm; fine plants, 5 inch pots, \$1.00 each.

PHOENIX CANARIENSIS—The Date Palm. And one of the hardest of the genus. The plants offered are fine decorative stock. 3 inch pots 25c.; 5 inch pots, 75c. each; 6 inch pots, \$1.00, and extra strong, \$1.50, \$2.50 and \$5.00 each.

PHOENIX RUPICOLA. This variety is always scarce. We offer a limited lot of finely developed plants; \$1.00 and \$2.00 each.

PHOENIX ROEBELLINII—(New.) The latest introduction of very graceful habit and growth. Young plants, \$1.00; larger plants, \$1.50 and \$2.50 each.

WASHINGTONIAS. We have a large stock of this hardy Fan Palm, which is used so extensively in the South for outdoor planting; specially adapted for lawn or sidewalk ornamentation. 3 inch pots, 25c. each; \$2.50 per dozen; larger, 50c., \$1.00, \$2.00, \$3.00, \$5.00 and \$10.00.

We can furnish larger sizes of any of these palms, prices on application.

ANNUALS.

FOR FALL PLANTING.

Plants Ready from November 15th to May 1st.

Asters, Assorted, 40c. per dozen, \$2.00 per 100.
Calendula or Pot Marigold, 40c. per dozen; \$2.00 per 100.

Chinese Pinks, 40c. per dozen; \$2.00 per 100.

Daisies, 40c. per dozen; \$2.00 per 100.

Golden Feather or Pyrethrum, 40c. per dozen; \$2.00 per 100.

Marguerite Carnations, 10c. each, \$1.00 per dozen.

Petunias, 50c. per dozen, \$3.00 per 100.

Phlox, 40c. per dozen, \$2.50 per 100.

Pansies, mixed, 40c. per dozen, \$2.50 per 100.

Sweet Alyssum, 40c. per dozen, \$2.00 per 100.

Verbenas, 50c. per dozen, \$3.00 per 100.

FOR SPRING PLANTING.

Plants Ready from April 1st to August 1st.

Alternantheras, red and yellow, for borders, 40c. per dozen, \$2.00 per 100.

Amaranthus, 40c. per dozen, \$2.50 per 100.

Blue Phlox, perennial, 75c. per dozen, \$4.00 per 100.

Cosmos, mixed, 40c. per dozen, \$2.50 per 100.

Zinnias, mixed, 40c. per dozen, \$2.50 per 100.

Ornamental Flowering Shrubs.

ALTHAEA VARIEGATA (Variegated-Leaved Rose of Sharon). This is a hardy shrub, with foliage beautifully variegated, each leaf being broadly mar-

gined white. Flowers dark crimson, very double. It forms a handsome shrub six to seven feet high. 25 and 50 cents each. Extra strong plants, \$1.00 each.

Double White—Continuous bloomer, 25 and 50 cents each. Extra strong plants, \$1.00 each.

Double Purple—Continuous bloomer, 25 and 50 cents each. Extra large plants, \$1.00 each.

Double Rose—Very delicate rose, 25 and 50 cents each. Extra large plants, \$1.00 each.

Banner (Rose of Sharon)—The most beautiful variety ever introduced. The flowers are as large as good-sized roses, and very double; the color is pale rosy pink, elegantly striped with rich crimson. It blooms in July and August, when every branch is loaded and crowded with flowers. It is a very handsome, erect growing little tree or tall shrub, 25c. and 50c. Extra large plants, \$1.00 each.

CALYCANTHUS OR SWEET SHRUB. Flowers chocolate color and deliciously fragrant; very desirable; 35c. to 50c. each.

CRAPE MYRTLE (*Lagerstræmia Indica*). Too much can not be said in favor of the delicate flowered Lagerstræmias; universal favorites in the South, and deservedly so. Deciduous shrubs, hardy in the Southern States, and producing throughout the summer great clusters of delicately fringed flowers. In Florida and the South the Crape Myrtle takes the place of the lilacs so common in the North. Makes the most charming flowering plant known. A success with every one.

White—This is quite scarce, and very lovely. A most desirable sort, 75c.; larger plants, \$1.00 and \$2.00.

Purple—A good sort, producing immense quantities of bloom of a rich purple color.

Scarlet—A very dark-shaded variety; in our opinion the very best of all. A gorgeous plant.

Pink—Same as Scarlet except in color. Price, 50c. and \$1.00; large plants, \$2.00 each. Extra large, \$3.50.

DURANTA PLUMIERII. A hardy free flowering shrub producing light blue flowers and pretty yellow berries in clusters resembling a currant. Very desirable. 25 cts., 50 cts., and \$1.00 each.

MAGNOLIA FUSCATA—Banana Shrub. A most desirable evergreen shrub; hardy South, but for conservatories North. The brownish yellow flowers, which appear in early spring, emit a delightful banana fragrance. 75c., \$1.00, \$1.50 and \$2.00.

OLEA—Fragrans—(Tea or Sweet Olive.) One of the most desirable flowering shrubs for Southern gardens. The white flowers, although small, are produced in clusters, and emit the most pleasing fragrance. It is well said that "each individual bloom has more sweetness than the most fragrant lily." It is of easy culture. 50c., 75c., \$1.00 and \$1.50. Large specimens, \$5.00 each.

PITTOSPORUM TOBIRA. Fine shrub, which is well adapted for trimming in fanciful shapes. Flowers yellowish white, very fragrant. Young Plants, 25c. each. Bushy plants, 50 and 75 cents each.

POMEGRANATE. This hardy shrub, which is easily grown throughout the Gulf States, is very graceful in form and foliage, and its brilliant scarlet flowers are very ornamental. 50 and 75 cents. Extra strong plants, \$2.00.

SPIRAEA, OR BRIDAL WREATH. Spring bloomers. 25c., 50c. and \$1.00.

TREE MIGNONETTE. A very fragrant blooming shrub, continuing its sweet fluffy flowers from early summer till late cold weather. Very pleasing. 25c., 50c. and \$1.00.

VEIGELIA. Very free flowering shrubs, blooming in spring. 35c. to 50c. each.

EVERGREENS.

On account of their increasing demand we give this class of trees and shrubs our special attention. We may say that as permanent planting there is nothing that is more beautiful and adds more comfort than well developed specimens of evergreen trees.

ARBOR VITAE (Compacta). Foliage light green; habit dwarf and compact. 50c. and \$1.00 each.

CEDRUS (Cedar)—Deodara—The great Cedar of the Himalayan Mountains). A stately tree, attaining a height of 50 to 75 feet; foliage glaucous green; branches feathery and spreading. Perfectly adapted to this climate. \$1.50 and \$2.50.

JAPANESE BAMBOOS. In variety, 50 cents and \$1.00 each.

RETINOSPORA — Japan Cypress — Plumosa or Plume Like. A rapid growing variety, with exquisite foliage and slender branches; very handsome. 75c. to \$1.00; large specimens, \$3.50 to \$5.00.

RED CEDAR. 50c., 75c. and \$1.00 each.

SPECIMEN BAY TREES. Both standard and pyramid shapes. Prices on application.

HEDGE PLANTS.

SICUS VITIDÆ—Box Tree. A fine small evergreen, with pale green leaves. Can be trained in any desirable form by shearing. 25, 50 and 75 cents each.

LIGUSTRUM AMURENSE — Armour River Privet. Our hedges of this desirable evergreen have for years past been noted for their perfect shape and appearance. It far surpasses the variety cultivated in Northern sections under the name of California Privet (*Ligustrum Ovalifolium*), which assumes a dingy green tint in winter, whereas the Armour Privet retains its brighter green color throughout the entire year and are now to be found

Cedrus Deodara.

Armour River Privet Hedge.

Plant Lespedeza Clover, the Greatest Forage Plant.

Citrus Trifoliata.

in every section of the Southern States. It has stood a cold of 20 degrees below zero in western North Carolina, and is equally successful in south Florida, thus withstanding both extremes of heat and cold. It is therefore the most desirable of all broad leaved evergreens where a tall hedge is desired. Growth very rapid; adapts itself to any soil not too arid or a swamp. If properly treated, a good hedge may be expected in two years after planting. Set plants 12 inches apart. After plants are set cut back one-third of growth in order to make a dense hedge. Strong plants 15c. each, \$3.00 per 100. Extra strong plants 25c. each, \$12.00 per 100.

CITRUS TRIFOLIATA. This is the hardest known variety of the Citrus family. Green bark and numerous stout branches armed with strong, sharp thorns. Very valuable as a stock for citrus trees of different kinds. White, fragrant flowers resemble those of true orange. Excellent for hedge for defensive as well as ornamental purposes. Fruit, golden

yellow, as large as a walnut. It is deciduous, grows well in the open ground as far north as Washington, D. C., and withstands temperatures of 15 degrees below zero and lower.

It has become of great importance as a stock for citrus trees of all kinds. Varieties budded on it are made hardier because of its dormant and hardy character, and the fruit is of exceedingly fine quality, ripening two or three weeks earlier than if budded on other stocks. It has been claimed that it dwarfs the trees budded upon it, but the tests of years in our test groves have not proven this to be so except in the case of a few varieties. For the Satsuma orange, it is the only stock to use.

Citrus Trifoliata is adapted for planting on alluvial lands, clay lands, soils underlaid with clay and those which naturally contain plenty of moisture or to which water can be applied by irrigation. It should not be planted on high, dry, sandy lands lacking in moisture. On such soils it is a failure.

Seedlings can be used as a hedge, and it forms an impenetrable barrier to man or beast and, with proper care, can be made rabbit proof.

We do not attempt to propagate all our varieties on Citrus Trifoliata, and carry only a select list of those varieties which our experience has proven will give satisfaction on this stock. Our list will be found on page 134.

Our stock of Citrus Trifoliata seedlings consists of 50,000, running from 10 to 36 inches:

10 to 15 inches,	\$15.00 per 1000;	\$2.00 per 100.
15 to 20 inches,	18.00	2.50
20 to 24 inches,	24.00	3.00
24 to 36 inches,	26.00	3.50

Citrus Trifoliata seeds, $\frac{1}{4}$ lb., 30c.; 1 lb., \$1.00
Special prices on larger quantities.

HARDY SHADE TREES.

WHITE ASH. Makes quite a pretty tree for yard or sidewalk planting. Grows rapidly; makes a very pretty shade tree. With large leaves and straight stalk. \$2.00 each.

RED FLOWERING MAPLE. A very pretty tree in the spring. It flowers before the leaves start. The flowers can be seen for some distance and are very attractive. The tree is easy to transplant and is not a very rapid grower. 3 to 4 feet, \$1.00; 4 to 6 feet, \$1.50.

AMERICAN ELM. Large leaf elm, healthy quick growth, long lived. A very desirable shade tree in every way. 7 to 8 feet, \$1.50; 8 to 10 feet, \$2.50.

CORK ELM. 6 to 7 feet, \$2.00; 10 to 12 feet, \$3.00.

COTTON WOOD. 6 to 7 feet, \$1.50; 8 to 10 feet, \$3.00.

BOX ELDER. 6 to 7 feet, \$1.50; 8 to 10 feet, \$3.00.

SILVER LEAF MAPLE. 7 to 8 feet, \$1.50; 8 to 10 feet, \$2.00.

WILD CHERRY. Used in making cherry bounce. 3 to 4 feet, \$1.50.

LAURIA MONDI 8 to 12 inches, (bushy), 50c.; 2 to 3 feet (bushy), \$1.50; 4 to 5 feet (bushy), \$3.00.

SYCAMORE. 7 to 8 feet, \$2.00; 8 to 10 feet, \$3.00.

CATALPA TEA'S JAPAN HYBRID. Large luxuriant foliage, handsome white flowers, with purple dots and a touch of yellow around the throat, with a pleasant, delicate fragrance; a tree in bloom not only presents a magnificent spectacle to the eye, but also fills the air quite a distance with its agreeable odor. In rapidity of growth it rivals the most luxuriant trees of temperate climates. 7 to 8 feet, \$1.50, 8 to 10 feet, \$2.00.

LIGUSTRUM VULGARE. Best evergreen shade tree; very hardy, and can be trimmed into any shape. \$1.00, \$2.00 and \$3.50 each.

CINNAMOMUM CAMPHORA—The Camphor Tree. This tree is perfectly hardy, and does well along the South Atlantic and Gulf coast. It is a handsome evergreen, with bright, shiny leaves. Will do well on poor soil, but, of course, will make a more satisfactory growth when properly fertilized. It is being planted in large quantities for producing the gum camphor of commerce. Price of pot grown plants, 50 and 75 cents each. Large plants from tubs, \$2.00 to \$6.00 each.

Camphor seeds, 50c. per oz., \$2.00 per lb.

LINDEN. A fine pyramidal tree with large leaves. Largely used for street and ornamental planting, developing into beautiful specimens. \$2.00 each.

MAPLE SYCAMORE. A free, upright, rapid grower, large deep green foliage; \$2.00 each.

MAGNOLIA—Grandiflora. The king of the Southern broad-leaved evergreen trees; needs no description. 3 feet, \$1.00 and \$2.00. Fine specimens, field

grown, \$3.00 each. Extra large trees, \$5 and \$10.00 each. Seed 30c. an ounce, \$2.50 per pound.

MAGNOLIA CONSPICUA. A very fine variety of the deciduous Magnolias, bearing beautiful pure white flowers, very early in the spring before any leaves appear. \$2.00 and \$3.00 each.

PURPURE. A very distinct Magnolia bearing clear purple flowers of large size. \$2.00 and \$3.00 each.

OAK—Live Oak. A typical Southern shade tree, nursery grown, well formed head. 6 to 7 feet, \$2.00; 8 to 10 feet, \$3.00.

Water Oak—Very popular. 5 to 6 feet, \$1.25; 7 to 8 feet, \$2.50.

Laurel Oak—Similar to Live Oak. 5 to 6 feet, \$1.25; 7 to 8 feet, \$2.50.

Pin Oak—5 to 6 feet, \$1.25; 7 to 8 feet, \$2.50.

White Oak—5 to 6 feet, \$1.25; 7 to 8 feet, \$2.50.

POPLAR, CAROLINA. A vigorous, healthy native tree of rapid growth, pyramidal in form, with large glossy leaves, valuable for park or street planting. Makes a fine, spreading head if well cut back the first few seasons; succeeds everywhere. 6 to 8 feet, \$1.50; 8 to 10 feet, \$2.50.

POPLAR, LOMBARDY. A native of Europe. Remarkable for its erect growth and tall, spire-like form. 8 to 10 feet, \$2.00.

Umbrella China Shade Tree.

UMBRELLA CHINA TREE—*Melia Azederach* Umbrauliformis. A sub-variety of the China tree. It assumes a dense spreading head, resembling a gigantic umbrella; is of unique appearance, and a most desirable tree of rapid growth. 2 to 3 feet, 50c. 5 to 6 feet, \$1.50; 6 to 7 feet, \$2.50.

Price of seed, $\frac{1}{4}$ lb. 15c., $\frac{1}{2}$ lb. 25c.; 1 lb. 50c. Add 10c. per lb. if sent by mail.

WEeping Willow. It forms without any trimming an exceedingly graceful tree, with glossy foliage and perfect umbrella head, unique in form. Vigorous and thriving in all soils, it is probably more widely disseminated than any of the finer ornamental trees. 5 to 6 feet, \$1.50; 6 to 8 feet, \$2.00.

HACKBERRY. These trees are rapid growers, very hardy, and easy to transplant. The foliage is a small delicate leaf which becomes a light orange yellow in the fall and in budding out in the spring. After the tree becomes five or six years old, it bears the berries from which it derives its name. The berries are red when ripe and very ornamental and of a pleasant flavor. The tree is shapely and requires but little care to make grow. 6 to 7 feet, \$1.50; 8 to 10 feet, \$2.50.

RUSSIAN MULBERRY. Much prized by some. A very rapid grower and hardy for the South. It should be in every yard or orchard. Price, 75c. and \$1.00 each. Extra large, \$2.50 each.

Weeping Mulberry.

THE BEAUTIFUL TEA WEEPING MULBERRY. Forms a perfect umbrella-shaped head, with long, slender, willowy branches drooping to the ground. Most desirable for ornamental lawns, parks or for cemetery planting. Price, \$1.50 and \$2.00 each.

Fruit and Nut Trees, Grape Vines and Strawberry Plants.

A few of the Best Acclimated Varieties suitable for the Southern States, Southern grown, and consequently are worth double the price of Northern stock, as Southern grown stock is best adapted to our climate and soil.

How to Plant Trees.

Although there are numerous books and papers published on arboriculture, giving necessary information how to plant trees, yet we are so often asked by some of our customers how to plow and prepare the soil for fruit trees; we therefore deem it necessary to give here some short instructions:

Make the ground thoroughly mellow, at least 15 inches deep and 3 or 4 feet wide each way if holes are to be dug, thorough plowing of the entire plat is preferable if it can be done. Prune the trees close; straighten out the roots evenly, having the tree standing the same depth it was in the nursery; work fine mellow soil (but no manure) among the roots, and when they are all covered an inch on two, press the soil firmly with the foot or a broad ended maul, after which fill up evenly with loose soil, over which place a mulch of rotten straw or manure, 3 or 4 inches deep, extending 3 feet every way from the tree. Whether the mulch is put on or not, keep the

soil well cultivated about the tree. In this climate all trees should be headed low and lean a little to the northwest when planted.

DISTANCE APART TO PLANT TREES, VINES, ETC.

Peaches, Plums, Standard Pears, Apricots, in light soil, 16 to 18 feet; in strong soil, 18 to 20 feet each way.

Figs should be placed 20 to 24 feet apart.

Dwarf Pears, Quinces, etc., 10 to 15 feet apart.

Japanese Persimmons, 10 to 12 feet apart.

Grapes, such as Delaware, Ives Seedling which are of slow growth, 6 to 8 feet apart each way.

Thrifty growers, like Concord, Triumph, Goethe, etc., 8 to 10 feet apart.

Herbmont, Cynthiana, etc., which are the most rapid growers, 12 feet apart in rows 3 feet wide.

All trees which require it are properly packed and defoliated before shipping to correspond to the legal requirements of each State where shipment is to be made.

APPLE TREES.

Owing to the large demand, we have concluded to add to our assortment of fruit trees the most suitable varieties of Apple trees for our Southern climate. The following are the most noteworthy, price, 50c. each; \$4.00 per dozen. Early Harvest, Ben Davis, Red Astrachan, Yellow Pippin.

BISMARCK APPLE. Tree of short, stocky growth, thick, heavy foliage; makes beautiful specimens, grown in pots for decorative purposes. Fruit large, handsome, yellow, sometimes shaded red cheek; flesh tender, pleasant sub-acid. Entirely new in its remarkable quality of producing crops on young trees, seldom failing to bear when two years old. 75 cents each.

APRICOT TREES.

The fruit of the Apricot is similar in shape to the Peach, except that it is not downy and is almost perfectly smooth. The leaves are cordate or heart-shaped and not long as Peach leaves, and the bark of the wood is coarse grained and not smooth and glossy like Peach wood. Apricots should not be confounded with Nectarines or Naked Fruit Peaches, which are often mistaken for Apricots. We handle the following varieties: Royal, Bongoum, Santa Fee. Price, 40c. each; \$4.00 per dozen.

CHERRY TREES.

Cherry trees, with few exceptions, will not do well in our Southern climate. There are some, however, which, if budded on hardy stools, will do well here and bear fruit. Our wild Cherries being the hardiest answer best for stools, but the Mariana Plum will answer equally as well and is quite hardy. The trees we handle are the best for our climate and soil. 75c. each.

FIG TREES.

BROWN ISCHIA FIG. A small brown fig; pyriform, when fully ripe of a deep brownish red color; tree especially valuable as a shade tree, its crown forming a fine umbrella, while the Brown Ischia is valuable, as a fruit tree alone it has many superiors. 60c. each, \$5.00 per dozen.

BROWN TURKEY FIG. This is a very large fig; color, violet brown, the earliest large fig in the San Francisco market. 60c. each, \$5.00 per dozen.

BRUNSWICK OR MADONNA FIG. The Brunswick is a large, purple fig turning blue when ripe. Quite hardy. 75c. each.

CELESTE OR CELESTIAL FIG. We have a good supply of one year old trees. They have been raised from cuttings in sandy loam are well rooted and raised to a single stem; not in sprouts as is often the case when raised from suckers taken off from old trees. The Celeste is not liable to sour like the yellow skinned varieties, and is much sweeter than other dark skinned kinds. One year old, 40c. each; \$4.00 per dozen; packed and delivered on steamboat or railroad depot, \$30 per 100. We have a few hundred of extra size trees, which have been transplanted. Price, extra size one year old trees, 75c. each, \$6.00 per dozen; three year old, \$1.00 each, \$9.00 per dozen; extra large, \$1.50 each.

JAPANESE VIOLET FIG. As all Japanese varieties of fruit trees seem to thrive and do equally as well, and in many instances better in our climate than in their own soil, our customers can feel assured that this grand Fig will prove a decided acquisition to the special stock we already carry. The fruit is the largest known, deep violet color, and flesh very sweet. No orchard is complete without a few trees of this delicious fruit, which is becoming more popular every year as an article of commerce. Price, 75c. each.

LEMON OR MAY FIG. This is the earliest of all the Fig varieties, producing medium sized cream or lemon yellow fruit, which ripens as early as the beginning of May. The tree bears twice during the season, the second crop ripening only under extremely favorable conditions. The fruit is of a delightful flavor, juicy and very sweet, and excellent for drying, canning or preserving. 40c. each, \$4.00 per dozen.

NEW WHITE ADRIATIC FIG. The tree attains an enormous size and is an immense bearer, bearing more than any other variety known. The fruit is of the finest quality; the skin is thin like paper, thinnest at base, and not like most other figs, thicker at the point. The pulp is very sweet, with small seeds, without a hollow space in the center; in fact, the whole fruit is one solid pulp. Stock very limited. Price 50c. each, \$5.00 per dozen.

CURE FOR BORE WORM ON FIG TREES. A solution of common coal oil and carbolic acid, used in the proportion 1.50 part of carbolic acid to 1 of coal oil. Syringe infected parts freely and cover sore with a cloth, saturated with the liquid after pruning the trees, always careful at proper season, and use above solution over the worm.

GUAVA TREES.

(Psidium.)

CATTLEYANUM — (Yellow Cattley). A small tree producing the Red Cattley Guava; \$1.00 each; large size, \$1.50.

LEMON TREES.

AMERICAN WONDER LEMON. Has created a sensation wherever shown. Habit dwarfed and vigorous, fruit three times the size of any other large Lemon. With ordinary treatment cannot fail to give satisfaction. Experts pronounce it simply enormous. Price, 25c., 75c., \$1.00 and \$1.50 per tree. Extra large, \$3.00 each.

TABLE OR COMMON LEMON. No orchard should be without a few of these trees. They belong to the Citrus family and as all citrus trees do well in the Southern States, we know that the

American Wonder Lemon.

Lemon will do equally as well. It has been grown through California and Florida for over half a century. \$1.50 per tree.

LIME TREES.

The Lime is tenderer than either the Orange, Pomelo or Lemon, and should be planted in South Florida or the Islands. The use of Limes in preference to Lemons for summer drinks is becoming more general, the demand far exceeding the supply. \$1.00 each.

NECTARINE TREES.

Require the same culture as the peach. The fruit, having a smooth skin, is very liable to attacks of the curculio, and must be sprayed as soon as the blossoms fall, and again every two weeks during May and June. They ripen through July and part of August. 50c. each.

ORANGE TREES.

Budded Orange Trees of the Following Varieties:

BRAZILIAN. This is a new variety in Florida, and as yet has not been tested by our growers. It is highly recommended to us for vigorous growth and producing qualities. Fruit is medium late, and retains its good qualities long after ripening.

GRAPEFRUIT. The old "Florida Grapefruit" was the fruit that first attracted attention to the Pomelo, and it has since become the most popular dessert fruit in existence. Great effort has been expended in an endeavor to improve it, but so far without success. From our view-point the "old Florida Grapefruit" is perfect, and, therefore, can not be improved upon, and it was from the very best seedling tree the writer ever saw, producing the very finest fruit possible.

JAFFA. Fruit medium in size, rather oval in shape, skin thin and very smooth like the Louisiana Sweet, somewhat resistant to rust mite, and usually bright and glossy. Flesh fine of texture, rich, melting and of excellent flavor, practically seedless; one of the best varieties; has been a favorite; does not bear young, but is prolific after trees attain good size.

Kin. Kan or Kum Quat Orange.

KIN KAN OR KUM QUAT ORANGE. Trees, 50c., 75c., \$1.00 and \$1.50 each. Extra large size, \$2.50 each.

LOUISIANA SWEET ORANGE. Very large, the favorite Orange of Louisiana; skin thin, very sweet, very juicy, hardy, good color, favorite in the markets of the world; none better; grows upright; rather bushy; grows in any soil.

MANDARIN. Medium in size, flattened, deep yellow in color, skin very thin and of fine texture. Skin and segments loosely adherent, flesh rather dark orange in color, spicy, aromatic and rich in flavor. Tree vigorous, compact in growth, bears young, and is very prolific. This variety is largely planted in Louisiana. Does well on all classes of soils where citrus fruits are grown, and we consider it a profitable variety. Not a dwarf.

OONSHIU. The celebrated Oonshiu Orange Trees, direct from Japan; 2 feet high; \$1.25 each.

OTAHUIT ORANGE. 35c. and 50c. each.

PARSON BROWN (Carhey). It is among the best of early fruits. Always medium in size, slightly oblong and smooth, thin skin, very heavy, solid and juicy; a decidedly sweet and delicious orange. Fruit will hang on tree in good condition until Jan. 15th, but should be marketed when ripe.

SATSUMA. Medium in size, flattened in shape, color yellow, somewhat inclined to color of Tangerine; rind and segments part freely; flesh fine grained, tender, juicy, sweet and delicious, entirely seedless, and one of the earliest varieties known; fruit always ripe in November and of good quality in early October. Tree thornless, of distinct habits, and very prolific; bears young, usually fruits when bud is one year old in nursery.

SOUR ORANGE SEED. We import direct from Japan our supply of sour orange seed, and offer same at 75c. per ¼ pound; \$2.00 per pound.

TANGERINE (Dancy's). One of the well-known "kid-glove" Oranges; belongs to the Mandarin family. Flat, small to medium; skin separates freely from the flesh; juicy, aromatic and rich, of a deep red color. Particularly good grower and prolific. Fruit very handsome on the tree. December, January and February.

WASHINGTON NAVEL. Trees almost thornless, strong growers. Fruit large red-orange in color; skin thick, smooth and tough; seedless, flesh tender, juicy and sweet; flavor peculiarly its own, luscious and fine. Particularly marked at blossom end, where a small secondary orange, irregular in shape, is formed, imbedded within, sometimes protruding from the segments of the fruit.

Prices on all the above orange trees except where otherwise noted.

Healthy, thrifty trees. All in proportion to sizes and ages:

2 feet.....	\$.80 each.....	\$ 9.00 per doz.
3 feet	1.00 each.....	10.00 per doz.
3½ feet	1.25 each	12.00 per doz.
4 feet, Balled,	\$1.50 each.	

PEACH TREES.

We have a fine assortment of Southern grown trees, selected from a very reliable nursery. They consist of the following varieties, viz:

Free Stone.

Jessie Kerr,	Amelia,
Amsden,	Stump the World,
Alexander,	Thurber,
Elberta,	Old Mixon,
Early Louise,	Crawford's Early,
Fleitas,	Early Sneed's,
St. John,	Crawford's Late,
Mountain Rose,	Smock,
Foster,	Picquet's Late,
Early Rivers,	Lady Parham,
Lady Ingalls,	Honey Peach.

Cling Stone.

General Lee,	Lemon,
Old Mixon,	Nix White Late,
Heath,	Stonewall Jackson,
Butler,	Stinson's October,
Chinese,	Columbia.
Indian Cling,	

Chinese Cling Stone Peach.

As they follow in the list they ripen in succession.
 Price 35c. each, \$3.50 per dozen; \$20.00 per hundred.
 Peach Seedlings, 20c. each; \$1.50 per dozen.
 Peach Pits, 25c. per pound; 6 pounds for \$1.00.

PEAR TREES.

BARTLETT PEAR. This well known variety, one of the finest pears in cultivation, has been successfully cultivated here, but occasionally it has blighted. Since the introduction of the Le Conte, trials have been made with success. This is, by grafting this and other fine varieties upon the Le Conte—by so doing the trees are imparted with the vigor of the latter, growing stronger, and making finer and healthier trees. We offer trees grafted on the Le Conte stock for sale. One year old trees, 50c. each, \$4.00 per dozen.

CLAPP'S FAVORITE PEAR. A large new Pear, resembling the Bartlett, but does not possess its musky flavor. Fine texture, juicy, with a rich, delicate vinous flavor. It is very productive, On Le Conte stock. One year old, 40c. each; \$4.00 per dozen.

DUCHESS D'ANGOULEME PEAR. Another popular variety which does well in this section on Le Conte stock. One year old, 40c. each; \$4.00 per dozen.

GARBER'S HYBRID PEAR. An excellent, hardy variety, introduced here some years ago by Richard Frottscher. It has proven an excellent bearer, and so far has never been attacked by blight. The fruit is oblong, of a delicious flavor, flesh melting and juicy. Ripens in August and September. On Le Conte stock; 40c. each; \$4.00 per dozen.

HOWELL PEAR. One of the best for here. Tree is an upright free grower, and an early and profuse bearer. One year old, 75c. each.

JEFFERSON PEAR. Another blight-proof Pear very distinct in habit and growth from other varieties under cultivation. It ripens in central Mississippi from the 1st to 10th of June, is in the market with the earliest peaches, and brings the highest prices. It is above medium size; color, bright yellow with a bright deep crimson, cheek. It is ripe and marketed before Le Conte is ready to ship. One year old, 40c. each; \$4.00 per dozen.

KEIFFER'S HYBRID PEAR. A hybrid between the China Sand and Bartlett, both of which resemble it in wood and foliage. It has the vigor and productiveness of its Chinese parent. Fruit large and handsome, bright yellow and red cheek; flesh tender, juicy and well flavored. It comes into bearing at an early age. Ripens end of September or beginning of October. It is excellent sort for preserving. Two year old trees, 40c. each, \$3.50 per dozen. Three year old trees, 75c. each, \$8.00 per dozen.

LE CONTE PEAR. This Southern Pear is as vigorous in growth as the China Sand, and is an enormous bearer. The fruit is large, pale yellow, juicy, melting, and of good quality, doing better in the South than elsewhere. It bears transportation well. Time of ripening begins about the middle of July. It promises to be the pear for the South. Rooted one year old trees, 40c. each; \$30.00 per 100; \$4.00 per dozen; two year old trees, 5 to 6 feet, 50c. each.

MAGNOLIA PEAR. A valuable new Japan seedling. It is a small, stock tree, with large, deep green leaves. It leafs out and blooms too late to ever be caught by frost. Bears when very young, two or three years after planting. The fruit is very large, dark reddish-brown. The flesh is white, tender, crisp and sweet. Very little core and no coarse grains near the core. The Magnolia is the best for

Le Conte Pear.

Magnolia Pear.

Best of all Beans, we know of no better for all purposes.

home eating and use of all the pears known to Southern planters. It ripens late. Generally later than Keiffer. 75c. each.

PLUM TREES.

ABUNDANCE PLUM. One of the oldest and best known Japanese varieties; hardy and productive. Fruit large, lemon yellow, with heavy bloom; good quality. 40c. each; \$4.00 per dozen.

APRICOT PLUM (*Prunus Simoni*). This plum comes from North China. The fruit, when ripening, shines like apples of gold, and becomes a rich vermilion when ripe. It is very firm and meaty, and equal to any plum, and has never been attacked by the Curculio. It will carry any desirable distance. Tree very thrifty, upright, early and abundant bearer. Price, one-year-old trees, 40c. each; \$4.00 per dozen.

BAILY PLUM. 40c. each; \$4.00 per dozen.

BERCKMAN'S PLUM. Fruit large, nearly round; skin green, with purple and blue bloom; flesh, yellowish, firm and sugary. Ripens June 20 to July 5. 40c. each; \$4.00 per dozen.

BURBANK PLUM. The best and most profitable among growers for market; ripens ten to fourteen days after Abundance. Tree hardy, sprawling, vigorous grower, unequalled in productiveness; bears young. Fruit large, excellent quality; cherry red with lilac bloom. 40c. each; \$4.00 per dozen.

EXCELSIOR PLUM. The tree is a remarkably rapid, strong grower, and bears annually and abundantly. Fruit medium to large, 1½ inches in diameter, nearly round, no suture, color deep solid wine-red, with heavy light bluish bloom; stem short, skin firm and without astringency; flesh firm, yellowish, with reddish color near the pit; quality fine; clingstone. Price, 40c. each; \$4.00 per dozen.

JAPANESE MESPIUS PLUM (*Erythria Japonica*). The Japanese *Mespilus*, which, by the way, is an old stand-by in our climate, has been cultivated here for over a century, and is too well known to require any description. By special arrangement with one of the best nurserymen we have been enabled to secure a lot of very fine branched trees, which we offer at \$1.00 and \$2.00 each.

"JUICY" PLUM. This glorious new Plum is a cross between Botan and Robinson. The fruit is the size of the former and three times larger than the latter, and of perfect shape. Skin thin and transparent, light yellow, underlaid with scarlet—as beautiful as wax. In quality it seems to us that there is no other fruit which can approach it. It has a delicious sweetness, mingling with a sprightly acid and a high, melting plum flavor, surpassing anything we ever saw; when fully ripe it is so juicy that when the skin is broken its delicious pulp flows out like honey. 50c. each.

KELSEY'S JAPAN PLUM. The Kelsey Plum is from two to two and a half inches in diameter, heart-shaped, rich yellow, with purple cheek. Parties who have been fruiting it here in the South pronounce it the most magnificent plum they have seen; it weighs from 4 to 6 ounces. It excels all other plums for canning and drying, and will carry for a long distance better than any other kind. Matures middle of August to September. Price, 40c. each; \$4.00 per dozen.

Mariana Plum.

MARIANA PLUM. This Plum originated in Texas, supposed accidental seedling of the Wild Goose. It is a rapid grower. Grows from cuttings, and never throws up any suckers or sprouts. Fruit as large, good and handsome as the Wild Goose; one to two weeks earlier; hangs on better; ships well; ripens and colors beautifully, if picked a few days previ-

Kelsey's Japan Plum.

ously. It is the best of the Chickasaw type. This variety and the Wild Goose should be fertilized by the common Chickasaw kind to have it bear well. Price, five to six feet high, 40 cents each; \$4.00 per dozen.

NORMAND PLUM. Fruit medium to large, obtusely conical, with heart-like base and short stem; skin clear, golden yellow; flesh firm and meaty, yellow, of high quality. Tree symmetrical; prolific, 40c. each; \$4.00 per dozen.

OGAN AND BOTAN PLUMS. Two other Japan varieties. They are vigorous, handsome growers; branches smooth, with rich light green foliage.

The Ogan is a large yellow variety, ripens early, and is very sweet. The Botan is very large, reddish blue; a good keeping and shipping fruit. Japan fruit does well here generally; everybody should try a few of these Plums. Price, 30c. each; \$3.00 per dozen.

RED JUNE PLUM. Recommended as "by all odds the best Japanese, ripening before Abundance." One of the vigorous, upright growers; productive; fair size; vermilion red; pleasant quality. Ripens a week before Abundance. August, 40c. each; \$4.00 per dozen.

SATSUMA OR BLOOD PLUM. This Plum is from Japan, and has been fruited in California for some years. The following is the description given by the introducer, Mr. Luther Burbank: "It is nearly six weeks earlier than the Kelsey, firm flesh, much larger, of finer quality, color and form. It is an early and enormous bearer, and the trees grow with more vigor than any of the other varieties of Japan Plum I have fruited here. The meat is also solid color from skin to pit, firm, rather juicy, and of good flavor." Price, 40c. each; \$4.00 per dozen.

WICKSON PLUM. Fruit remarkably handsome, very large, long, heart-shaped, color deep maroon red covered with white bloom; flesh firm and meaty, yellow, rich and aromatic, cling pit. 40c. each; \$4.00 per dozen.

WILD GOOSE PLUM. A native variety from Tennessee, where it is highly esteemed for market. It is a strong grower, the fruit is large and of good quality. Price, 40c. each; \$4.00 per dozen.

PERSIMMON TREES.

Japanese Persimmon.

JAPANESE—(Hyakume, Zenpi Triumph.) This valuable fruit has been fruited for the last few years. Most varieties are of excellent quality; twice and three times as large as the native kind, very attractive when the fruit is ripe. The fruit often weighs a pound, is very sweet and of a most delicious flavor. As they are of easy culture and do well here; it is a profitable fruit to grow. Assorted varieties. Price, 50c. each, \$5.50 per dozen.

POMEGRANATE TREES.

NEW POMEGRANATE "SPANISH RUBY." Fruit very large, as large as the largest apple; eye very small, skin thick and smooth, pale with crimson cheek; meat of the most beautiful crimson color, highly aromatic and very sweet. The Spanish Ruby is a fine grower and good bearer, and the fruit is ex-

Wild Goose Plum.

cellent for shipping, as it will keep for a long time. It ripens shortly before Christmas and could be shipped to Northern cities, where during the holidays it would attract great attention. Price, 50c. each; extra size, \$1.00 each.

LARGE SWEET POMEGRANATE. Same as above, except in color of seed and flavor. Price, 50c. each. Extra large size \$1.00 each.

NUT TREES.

ALMOND TREES.

PRINCESS AND SULTANA ALMONDS. These are the varieties mostly cultivated in Europe, and produce the bulk of the Almonds of commerce. 75c. each, either hard or soft shell; large size, \$1.50.

CHESTNUT TREES.

THE JAPANESE MAMMOTH CHESTNUT (*Castanea versata* var. *Japonica*). Our climate and soil seems to be well adapted for all varieties of Japanese fruit trees. There are several fine Japanese trees in this vicinity grown from seed, some of which bore for the first time several years ago, and have borne abundantly every year since then, each burr containing two large and perfect nuts. The nuts are much larger than any of those imported from Italy or Spain, and equally as good and fine in flavor. We have a limited supply of imported seed on hand. Price, \$1.00 per pound; by mail 10c. extra; trees at \$1.00 each.

PECAN TREES.

We are often asked, "How many years after planting will a Pecan Orchard become a paying investment?"

After considerable investigation, we conclude that it will be in about ten years. Although, under favorable conditions, the trees at six years after planting will show some fruit, and in the seventh, eighth and ninth years may yield enough to pay working expenses, still it will be at least ten years before a profitable crop can be expected. We think that they will not reach the maximum yield until about thirty years after planting.

It is understood that this conclusion is based on the supposition that the best varieties of budded or grafted trees are planted.

Of course, it can be shown that results better than this have been obtained, but we are now considering returns that may be expected from an orchard on a large scale, not such as have been received from a few trees here and there forced under the best conditions.

Pecan growing is such a solid, certain, profitable business that it is really unnecessary to exaggerate the returns in the smallest degree.

As an inducement to start with something exceptionally fine, we offer with every order of 50 Pecan trees, one of Steckler's Mammoth and Nelson's Mammoth, and in lots of 100, two of each.

CENTENNIAL PECAN. Nut large, long, pointed at both ends. Shell thin. Kernel plump, rich and sweet. Quality best. Abundant annual bearer. Habit of growth, willowy, forming a thick, round-headed tree. Original was grafted more than 60 years ago. Has been long known as one of the very best sorts.

QUINCE TREES.

We have added to our assortment of fruit trees the Quince, which will do well in our climate. Quince trees, the fruit of which is used for preserving; are very ornamental, and bear well. We handle the Orange, Meeches' Prolific and Japanese varieties, which we sell at 75c. each. Extra large size, \$1.50.

FROTSCHER'S (EGG SHELL) PECAN. Nut large, oblong, ovoid in shape, very thin shell. Kernel plump, full. Quality best. Abundant annual bearer. A rapid grower. Comes into bearing very young. Habit of growth somewhat like Centennial, not quite so dense, forming a fine round-headed tree. This is justly a very popular variety.

NELSON PECAN. Nut the largest of all known; some specimens weighing nearly one ounce. Elliptical-oblong in shape. Medium thin shell, clean, bright in color. Kernel plump, sweet and rich. Quality very best. A quick grower. Early bearer, very prolific. Habit of growth like the Frotscher, forming a round-headed tree. This is surely the finest pecan tree introduced. Price, \$2.50 each; \$24.00 per dozen.

ROME PECAN (Columbian), (Pride of the Coast), (Twentieth Century). Nut very large, large and round at stem end, gradually sloping off to a point at the other. Thin shell. Upright habit of growth, making a very large, tall tree. Where it has a suitable location, a desirable kind. Quality good. Some complain that this variety does not always fill well, but as this conclusion is based on nuts from young trees just come into bearing, this defect may be eliminated when trees reach maturity. Parent tree is known as the "Pride of the Coast" along the Mississippi Valley.

RUSSELL PECAN. Originated in Lower Mississippi. Is a very fine paper-shell nut, and the tree is a regular and abundant bearer, but, as it continues in growth very late in the season, it is not advisable to plant this variety except in the lower South.

SCILEY PECAN. Nut medium in size. Oblong-ovoid in shape. Smooth, clean, and bright in color. Very thin shell. Kernel very plump, sweet and rich. Bears abundantly; of rapid growth. Comes early into bearing. This is also a popular and standard variety.

STECKLER'S MAMMOTH PECAN. Nut very large, elliptical-oblong in shape, round and full at stem end. Thin shell, full meat, quality best. A lately introduced variety of great merit. Price, \$2.50 each; \$24.00 per dozen.

STUART PECAN. Nut large, thin shell, ovoid in shape, full meat. Quality best. Abundant bearer, of rapid growth. A standard variety, of established merit, and popular.

SUCCESS PECAN. Nut large and round, with medium thin shell. Does not appear as large as the Rome, Nelson or Steckler, but very full, and containing a larger quantity of meat than any other pecan on the market. The shell is easily cracked, and the whole kernel removed without breaking. The tree is a very quick and vigorous grower. We consider it one of the finest varieties.

THE PROPER DISTANCE APART TO PLANT PECAN TREES.

In deep, alluvial soils, 70 feet apart each way, requiring 9 trees to an acre.

In sandy, poor soils, 50 feet apart each way; requiring 16 trees to an acre.

Prices for Frotscher's Eggshell, Centennial, Rome, Schley, Success, Stuart and Russell:

\$1.50 each, \$17.00 per dozen, 4 to 5 feet, 2-year buds on 3 year old stocks.

\$1.25 each, \$14.00 per dozen, 3 to 4 feet, 1 year buds on 3 year old stocks.

90c. each, \$10.00 per dozen, 2½ to 3 feet, 1 year buds on 3 year old stocks.

These last two are same age, but graded as to size of growth.

Lots of 50 to 100 trees we will allow special discount of 10 per cent.

When varieties ordered are not in stock, other varieties will be substituted unless instructed to the contrary.

Frotscher's Egg Shell, Rome, Centennial, Schley, Success, Stuart and Russell, in extra large size trees, 5 to 6 feet, \$2.50 each net.

Pecan nuts for planting of the following varieties: Centennial, Frotscher's Egg Shell, Rome, Stuart, Schley, Russell, Delmas and Van Deman, selected with special care, \$1.50 per pound. Steckler's Mammoth, \$2.50 per pound. Nelson's \$3.00 per pound. If by mail add 10c. per pound for postage.

Buds or Grafts of Frotscher's Egg Shell, Rome, Centennial, Schley, Success, Stuart and Russell Pecans at \$3.00 per 100; \$25.00 per 1000. One eye to the bud and three buds to each scion.

Buds or Grafts of Steckler's and Nelson's Mammoth at \$5.00 per 100. One eye to the bud and three buds to each scion.

SEEDLING PECAN TREES.

We have on hand a large quantity of seedlings suitable for stools to bud or graft upon.

One to 2 feet 25c. each, \$2.00 per 10; \$17.00 per 100; 2 to 3 feet, 35c. each, \$2.75 per 10; \$22.50 per 100.

We have the small Pecan nuts used to raise seedlings or stools to bud or graft upon, at 20c. per lb., \$18.00 per 100 lbs.

SPECIAL NOTICE.

Our prices are low considering the grade of trees we sell. On comparing our trees with those grown crowded together in seed bed, without transplanting, 4 or 5 feet high—mere switches—drawn up; because of this condition, a large percentage of them die on being planted in the orchard. Our trees are all transplanted before budding, are given room to grow, making strong stocky trees, well rooted and in condition to bear transplanting in orchard without injury to the trees. They should all grow if properly planted. Our customers who have planted both grades of trees will endorse this statement.

APPROXIMATE NUMBER OF PECAN NUTS PER POUND, CROP 1910.

Steckler's Mammoth, 42 to the pound.
Frotscher's Egg Shell, 57 to the pound.
Centennial, 57 to the pound.
Seedlings, 200 to the pound.

GALBREATH'S PECAN BUDDER. \$3.75 each.

NELSON'S ANNULAR BUDDING KNIFE, for budding Pecan trees, \$3.50 each.

PERFECTION PECAN AND NUT CRACKER. Fasten to a table, desk, chair, or any convenient place, placing the nut in the fixed pocket with one hand, give sharp tap with finger of other hand on end of the handle bar, causing movable head to tighten quickly against nut; as it begins to crack give handle a quick turn forward the shell bursts immediately at the center, loosening the meat so as to be easily removed unbroken. A few trials will show you just what pressure is necessary and enable you to crack nuts perfectly. Price, \$2.00.

Same as above, to be used by hand only, \$1.75.

WALNUT TREES.

ENGLISH WALNUTS. \$1.00 per tree. Nuts \$1.00 per pound; by mail 10c. extra.

JAPANESE WALNUTS—*Juglans Japonica Cordiformis*. Another variety of Japanese fruit, the trees of which will bear here as well as the above mentioned Chestnut. The fruit is nearly the size of the English Walnut, heart shaped, and, although hard shelled, is very easy to open. The seed which we offer is of our own importation. Price, \$1.00 per pound; by mail 10c. extra; trees at \$1.00 each.

BERRIES.

BLACKBERRIES.

CULTURAL DIRECTIONS—Blackberries thrive on almost any soil, but the most desirable is a strong loam, retentive of moisture, tending toward clay rather than sand, but soil must be well drained at all

times. Fertilizers containing a good proportion of potash are the most desirable; too much humus or nitrogen will induce a rank growth of wood at the expense of the fruit. As a preventive for rust, spray with copper sulphate solution during the fall and winter, and with Bordeaux (4-6-50) during the spring

and summer. The rows should be 6 to 8 feet apart, and the plants from 3 to 4 feet in the row, according to the character of the soil. If desired to cultivate both ways, set the plants in checks 6 to 7 feet each way. As soon as the fruiting season is past, remove the old canes; these should be burned at once. The young canes should be clipped off when they reach the height of about 2 feet; this will cause them to branch, and they will become self-supporting. Apply fertilizer during the late winter, and give shallow and constant cultivation.

ICEBERG. This remarkable Blackberry is one of Luther Burbank's productions. It succeeds admirably in this climate. The fruit is transparent white. The seeds, which are usually small, can be seen in the ripe berries. The fruit is borne in large clusters. The berries are of large size and good quality. The plant is an enormous bearer, and the fruit lasts through a long period. A desirable variety. Strong plants, 15 cts. each, \$1 for 10, \$3.50 for 50, \$6 per 100.

MULBERRY TREES.

Very popular, especially South, where the fruit is fine food for hogs and poultry. The tree is also fine, for shade, as it grows rapidly and is very hardy.

Downing's Black—Fruit very large, black and subacid; mostly planted North. Fruit about June 1 to middle of July.

Hicks', or Everbearing Black—Very popular South; rapid grower, bears very young and has a long season, from June 1 until the middle of August. Very sweet.

New American—Equal to Downing's in all respects, continuing in bearing fully as long, and a hardier tree. Fruit jet black.

Black English—Fruit very small and sweet, but not as good as Hicks'.

All the above varieties, 75c. each.

Senator Dunlap Strawberry.

NUMBER OF STRAWBERRY PLANTS REQUIRED TO PLANT AN ACRE.

11,000 to acre, 4 feet rows.
12,500 to acre, 3½ feet rows.
14,000 to acre, 3 feet rows.
12 inches apart in row.

Weeping Tea—See Page 132.

Russian—See Page 131.

STRAWBERRY PLANTS.

EXCELSIOR STRAWBERRY. The most profitable extra early berry grown. It is four to six days earlier than the Michel; firm and good shipper; stands heat and drouth second to none; beautiful deep blood red to center; exceedingly productive, thrifty and rank in growth; berries large and good shape; it is a staminate or self-pollenizer. 75c. per 100; \$6.00 per 1000.

KLONDYKE STRAWBERRY. We have a fine stock of this valuable new variety grown from plants derived direct from the originator. We know them to be the absolutely true and pure Klondyke. 60c. per 100, \$5.00 per 1000.

LADY THOMPSON STRAWBERRY. The marvelous vigor and immense productiveness of this berry, its ability to adapt itself to all soils and all climates; its apparent indifference to heat, drought or flood, has rendered strawberry growing profitable over vast regions where most other varieties could not be grown with profit, if at all. It is an exceedingly easy plant to live and is quick to grow off, rain or no rain. Hence its great value, especially for fall planting. Price, 60c. per 100, \$5.00 per 1000.

MICHEL'S EARLY STRAWBERRY. We have various sorts of soil in Louisiana, and the strawberry suitable to and succeeding equally well in poor or rich land can only be determined by practical experiment. A strawberry having all the good qualities has not, and perhaps never will be discovered; still in choosing it is well to purchase plants having as many good points as possible. This we claim for Michel's Early. It is claimed to be the earliest in cultivation. It makes perfect flowers and fruit. Very prolific. Price, 50c. per 100, \$4.00 per 1000.

OCEAN CITY PROLIFIC STRAWBERRY. A splendid berry which originated in Worcester County, Md. Plant is vigorous, with large broad green leaf; fruit as large as the Rubach, and larger than the Michel's Early but later in bearing. Good for second crop; very prolific and a very fine shipping berry. Price, 75c. per 100; \$6.00 per 1000.

PURE IMPROVED HOFFMAN STRAWBERRY. If an experienced grower or commission merchant was asked what variety of strawberries, owing to its size, brilliant coloring and perfect shipping qualities, brought uniformly the highest price on the market, there could be but one answer—Hoffman. It stands drought well, the berry seeming to be composed more largely of solid matter than other varieties. Hence its unsurpassed firmness and high value as a shipping berry. It has a special value to growers who have to ship a long distance to market without refrigeration. Its great firmness enables it to carry fresh and bright a very long distance without ice. Price, 60c. per 100, \$5.00 per 1000.

SENATOR DUNLAP STRAWBERRY. Immense producer of firm berries of the highest flavor and beautiful color; thrifty grower and splendid drought resister. Per 100, 75c.; per 1000, \$6.00.

12,000 to acre is the average number in this vicinity. Where 11,000 plants are put on an acre they are more easily cultivated with a horse, and the fruit is likely to be larger.

GRAPE VINES.

GLOBE REPRESENTS
SIZE OF GRAPE.

Have some select varieties for the table and for making wine. The following is a list of them, viz:

COLUMBIAN IMPERIAL GRAPE. This is the largest, and most beautiful purple Grape in the world. The vines are very productive and grow in any soil. Its deep feeding root enables it to resist any long period of drought which, however, while somewhat reducing the size of the fruit, does not in the least affect its bearing qualities. It is decidedly free from disease—mildew and black rot. Grows in immense clusters, berries of rich purple color, fine flavor, sweet juicy pulp, compact and even growth. Desirable shipping and table grape. Price, 50c. each.

CONCORD. Early; very popular; good for market, 25c. each, \$2.50 per dozen.

CYNTHIANA. Very much like the Concord. Price, 25c. each, \$2.50 per dozen.

DELAWARE. Well known. Regarded as best American Grape; it does well in the South, with good soil and high culture. Price, 25c. each, \$2.50 per dozen.

GOETHE. Light pink, very fine for table use. It is the best of the Rogers' hybrids. Price, 25c. each, \$2.50 per dozen.

HERBEMONT—(McKee). The most popular and successful red or purple grape in the South, excellent for table and wine. McKee is identical with it. Price, 25c. each, \$2.50 per dozen.

IVES. Ripens with the Concord. Good for wine vigorous and productive. 25c. each, \$2.50 per dozen

MOORE'S EARLY. Large size and very early good for table use. Price, 25c. each, \$2.50 per dozen

NORTON'S VIRGINIA. An unfailing never rotting red grape of fine quality. Price, 25c. each, \$2.50 per dozen.

NIAGARA. The Niagara grape is the best of the white varieties. The bunches are large, transparent white, very sweet and delicious in flavor. This is one of the best table grapes, but will answer also for wine making. 25c. each, \$2.50 per dozen.

SCUPPERNONG. The Bronze Scuppernong Grapes are native of the South, and bear well here. In Mississippi, Alabama and Florida, Scuppernong Grapes are largely planted for preserving and wine making; they are excellent for the latter purpose, and will make as good wine at Missouri. The vines should not be trimmed. 1 year old, 30c. each; 3 year old, 75c. each.

TRIUMPH. This is a late variety; bunches very large, golden when fully ripe; fine as best foreign, and sell equally well; melting pulp, small seeds, vigorous as Concord, of which it is a hybrid seedling. Rarely it rots; stands pre-eminently at the head as a late table grape. Price, 25c. each, \$2.50 per dozen.

AGRICULTURAL IMPLEMENTS.

PLANET, JR., IMPLEMENTS

NOTE.—The prices on the Planet, Jr., Implements are made by the manufacturers and no one is allowed to deviate from them.

It is compulsory that all parties handling these goods must abide by this rule or else they will lose the right to sell them.

"Planet, Jr., No. 1.

"Planet, Jr., No. 3.

Leg Bands for Tagging Poultry.

"PLANET, JR.," No. 1. Combination Drill and Wheel Hoe, Cultivator and Plow. No rakes. It has a complete set of cultivating tools, and all its work is rapid, easy, perfect and delightful. From a drill it is changed to its other use by unscrewing two bolts when any of the attachments shown in the cut can be quickly made ready for use. Price \$9.50.

"PLANET, JR.," No. 3. Hill Dropping Seeder. Sows either in hill or in continuous row. This drill sows in a continuous row, in the ordinary way, with greatest regularity. It is changed in a moment from hill dropping to drill work, sows equally well whether the hopper is full or contains only a paper of seed, and will not injure delicate seeds, such as radish, cabbage, etc., which are so often peeled or

Planet, Jr., No. 4.

Planet Jr., No. 16.

Planet, Jr., No. 17.

crushed by imperfect seeders. The plow is adjustable and opens a very narrow furrow, which is a great advantage for after cultivation. Price, \$10.50.

"PLANET, JR.," No. 4. Drill only. Price, \$9.00. Combined Hill and Drill Seeder and Single Wheel Hoe. No rakes. Price, \$11.00.

"PLANET, JR.," No. 13. Double Wheel Hoe. Price \$4.75. This tool is the No. 12 with 6 inch hoes only, these being the tools that are most generally useful. Any or all of the other tools shown with No. 12, may be added at any time, and are sure to fit.

"PLANET, JR.," No. 14. Double Wheel Disc Hoe, Cultivator and Plow. Price with attachments, \$8.00. One set disc hoes, one pair 3-prong cultivator teeth, one pair plows, one pair leaf lifters. This tool will give excellent satisfaction; especially pleasing to all who work peat lands.

"PLANET, JR.," No. 16. Single Wheel Hoe, Cultivator, Rake and Plow. This tool is considerably lighter than the Double Wheel Hoe; having almost similar attachments it is capable of doing nearly the same kind of work. Price \$5.85.

"PLANET, JR.," No. 25. Combined Hill and Drill Seeder, Double Wheel Hoe, Plow and Cultivator. This machine practically combines in one tool the No. 4 Drill and No. 12 Double Wheel Hoe. It is large enough for field use, for it holds 2½ quarts or about 5 pounds of onion seed. The change from drill to wheel hoe and back again is quickly made and the entire combination is one we can heartily recommend and guarantee satisfaction. Price, 13.50.

Planet, Jr., No. 12.

"PLANET, JR.," No. 12. Double Wheel Hoe. Price with attachments as in cut, \$7.00. One pair of 6 inch Hoes, two pairs of Cultivator Teeth, one pair of plows.

"PLANET, JR.," No. 17. Single Wheel Hoe. Price \$5.00. One pair of 6 inch hoes, three cultivator teeth, and a large garden plow.

"PLANET, JR.," No. 17½. Single Wheel Hoe. With hoes, cultivator teeth and leaf lifter. Price \$4.50.

Planet, Jr., No. 25.

Try Steckler's New Calico Bush Butter Beans.

Steckler's Improved No. 19.

STECKLER'S IMPROVED No. 19. Single Wheel Hoe, Cultivator and Plow. This implement is especially designed for farmers' garden work, though it offers to every one with either field or garden, a cheap and effective tool for all hand wheel hoe operations.

The great variety and fine shape and quality of the tools make the implement valuable for many kinds of work. It is strong, well made and can be quickly set so as to be useful, whether in the hands of a man or woman, boy or girl. Strength, variety of tools and cheapness are its great virtues. Price, \$3.75.

Planet, Jr., No. 38.

"PLANET, JR.," No. 38. Single Wheel Disc Hoe, Cultivator and Plow. Price, complete, \$7.00. Packed weight, 29 lbs. One set discs, 1 pair 3-prong cultivator teeth, 1 plow, 1 leaf lifter.

THE "PLANET, JR.," GRASS EDGER. The grand secret of attractiveness in grounds surrounding a house is extreme neatness. The "Planet, Jr., Grass Edger" assists wonderfully in producing this effect.

Strawberry growers will find the Grass Edger, with the hoe removed, a rapid and perfect tool for cutting off surplus runners. Price, \$6.25.

THE "FIRE FLY"—Wheel Garden Plow. This tool is intended for those who have small gardens and a moderate amount of time to work in them. It enables them to raise vegetables for their family or for market with small expenditure of labor and time. Price, \$2.35.

The Planet, Jr., Grass Edger

The Fire Fly Wheel Garden Plow.

THE KOHLER TRANSPLANTER. This is the simplest and best of all Transplanting tools yet introduced. It is light, yet strong, and so constructed that when the handles are spread the blades form a closed pocket, from which no ground can escape,

The Kohler Transplanter.

but retains all the soil around the roots. It is provided with stops at the Hinged Joints, thus preventing all danger of injuring the tops of the plants. Full length of tool, 22½ inches, and complete weight, 2½ pounds. Price, \$1.50.

THE ACME SEED DRILL. A Garden Seed Drill that will distribute Beet, Cabbage, Carrot, Celery, Lettuce, Radish, Turnip, and all such seeds with perfect regularity. Price, \$1.50.

Plant all varieties of Peanuts and all varieties of Field Corn.

EXCELSIOR WEEDING HOE, 15c. If by mail, 20c. each.

The GEM SEED POTATO CUTTER has all the essential features necessary to a first-class tool. It will cut any size potato in pieces uniform in size, thereby insuring more accurate planting when power planter is used. The operator, to get the best results, will pick up the tuber, look for the seed or blossom end, passing it over the knife on upper side of pressure lever, thus removing the cause of so many empty potato hills in your potato patch. Then, according to size of potato, place it on knives, so that, when lever is pushed down, it will be cut into either two, four or six; or, if a very large one, split it, and cut each half into as many pieces as its size will require. From six to eight bushels can be cut with it in an hour. The saving in time alone will more than pay for this cutter the first season it is used. Price, \$2.50.

The Eureka Seed Drill.

THE EUREKA KITCHEN GARDEN AND HOT BED SEED DRILL. It will sow and cover beets, cabbage, carrots, celery, lettuce, onion, radishes, spinach, turnips and all seeds with the greatest regularity. The quality of work equals that done with the costly machines, and infinitely better and faster than hand work. Price, \$2.00 each.

THE ECLIPSE CORN PLANTER. This implement is, in the working parts, similar to the Chautauqua, except that it is made of wood instead of iron and steel. It is easier handled than any other, and will do as much work as the best. Price, \$2.00.

CLEVE'S ANGLE TROWEL. This handy digger was originally intended for digging plantains and other weeds from lawns, but it has also found great favor among the ladies as a flower cultivator for loosening the soil in pots, and among young plants for transplanting. It serves every purpose of the old form of trowel. Price, No. 1, 40c.; No. 2, 30c.; No. 3, 25c.

Wellhausen Garden Plow.

WELLHAUSEN GARDEN PLOW. Best Garden Plow on the market, being light in weight, yet constructed so strongly that it can not get out of order. It is the perfection of implements in working gardens, a boy or girl of ten years being able to keep a garden in perfect order, and as the handles are adjustable, it can be quickly set to any height desired. The attachments consist of 1 Turning Shovel, 1 Sweep or Weeding Blade, 1 Furrow Opener or Shovel Blade. Price each, \$4.00.

THE CLIMAX LAWN WEEDER. Works automatically; will grab and hold anything with sufficient grip to remove root and branch. New, simple and easy working device for ridding yards and lawns of all noxious plants and weeds. Stand erect, holding the handle in one hand, push the chisel under the plant at an angle that will cut the root at any desired depth. Withdraw the chisel until the grab

comes directly over the weed desired to be removed; a slight pull on the trigger will bring the Serrated Grab down, holding firmly enough to take out the plant, and all, leaving only a slight mark. Price, \$1.50 each.

MASTERS RAPID PLANT SETTER. For setting out all kinds of plants, such as Cabbage, Tomatoes, Tobacco, Sweet Potatoes, Onion Slips, Celery, etc., this Setter is simply perfection itself. Any gardener or farm hand can easily set out 12,000 plants in 10 hours, and after you have become used to it, you will find no difficulty in setting out 15,000 plants per day, and there will be no re-setting plants, as it does absolutely sure work. Should dry weather set in at planting time this Planter will give each plant half a teacup of water at the root the moment it is put into the ground, and the Setter automatically throws into the hole on top of the roots and water plenty of earth, so that the plant becomes set, watered and covered at the one operation. Price, \$3.75 each.

ONLY PERFECT SEED SOWER. \$2.50 each.

THE COMBINATION WEEDER. Combining, as it does, both the rake and the hoe, it is the most serviceable, durable, and most perfect on the market. 40c. each.

BROWN'S LITTLE JAP HAND WEEDER AND THINNER. The most practical tool. 30c. each; if by mail, add 10c.

EMPIRE KING SPRAYING PUMP. Will spray two hundred trees per hour. Has automatic mechanical agitator which ensures the perfect mixing of the poison and water, and an automatic brush for keeping strainer clean. With single brass spout and shut-off cock; also with galvanized suction and strainer, and with a 10-foot lead of heavy hose and one Niagara nozzle. Fig. 63-C mounted on 50-gallon barrel, \$20.00; Fig. 63-C mounted on 100-gallon cask, \$33.00.

The machine is so simple in construction and perfect in operation that even a boy can operate it. \$2.50 each.

BROWN'S

PAT. BY THOMAS L. BROWN, SEPT. 27, 1904

EASY WEEDER

ONE MAN WITH
THIS WEEDER CAN DO
MORE WORK THAN TWO CAN
DO WITH ANY OTHER WEEDER
ON THE MARKET
"AND DO IT BETTER"

BROWN'S EASY WEEDER. Especially adapted for working among carnations, roses, etc. Equally as valuable to the market gardener and nurseryman, and the best all-round weeder for the private garden. 35c. each; if by mail, add 10c.

IMPROVED PLANTING DIBBLE. This tool is designed for setting out cabbage, celery, tobacco, tomatoes, onions and similar plants. Price, 40 cents each. If ordered by mail, 10 cents extra must be added for postage.

MYERS GALVANIZED IRON KNAPSACK SPRAY PUMP No. 330. The tank holds 5 gallons, and is fitted with lid and strainer, which can be removed. The pump is our regular Brass Bucket Spray Pump with large air chamber, brass ball valves, solid plunger and agitator. The handle lever can be shifted from right to left shoulder, at will. Fitted with 5 feet of $\frac{1}{2}$ inch hose, pipe extension and Bordeaux or graduating Vermorel spray nozzle, which can be graduated from a fine mist spray to a solid stream, or shut off entirely. Price, \$9.00.

MYERS PERFECT KNAPSACK SPRAY PUMP No. 331. With Copper Tank and Brass Ball Valves.

The Lenox Sprayer.

Is identically the same as No. 330, with the exception that the tank on the Perfect Sprayer is constructed entirely of copper. Complete with hose, stop cock, pipe extension, and Bordeaux or graduating Vermorel nozzle. \$14.00.

THE "LITTLE GEM" SPRAYING PUMP. This Pump is made entirely of brass. The entire weight of the pump complete is 4 pounds. When boxed ready for shipment, 7 pounds. The price with both nozzles, including an iron stirrup for holding it firmly in the pail with the foot, \$5.00.

THE LENOX SPRAYER. This sprayer is made similar in style to the Eureka, only it is made of zinc instead of copper, and is worked by pressing a rubber bulb which is attached to the end of the hose. It surely is very beneficial for spraying small plants, such as cabbage, potatoes, cauliflower, etc.; also for young trees and grape vines, especially when using mixtures for insecticides, etc. This is the cheapest Knapsack in the market; very durable, and will pay for itself in a short time. Price complete, \$6.00.

Little Gem Spraying Pump.

Frotscher's Large Purple or New Orleans Market Eggplants.

Faultless Sprayer.

FAULTLESS SPRAYER. Made of tin. Throws a spray as fine as mist. Kills, drives away and exterminates every living thing obnoxious to yourself, your animals or your crops. Price, each 75c.; per dozen, \$7.00.

IDEAL PLANT SPRINKLER. Is one of the most serviceable devices for spraying plants indoors and out. Plants when housed generally suffer from lack of moisture, such as rain or the morning dew give them; furnace or stove heat affects them badly. This spray substitutes a misty shower that supplies the plant most naturally and completely, is absolutely necessary to real success with house plants. Price, 75c. By mail 20c. extra.

Ideal Plant Sprinkler.

THE CORNELL KNAPSACK SPRAYER. This is substantially the same as our "Garfield" Knapsack Sprayer, except that the tank is of galvanized sheet steel. This pump is all brass with brass valves. As it will stand considerable rough handling, we are certain it will give satisfaction. Price, with 4 feet hose, brass hand tube, 14 inches long, shut-off cock and Vermorel nozzle, \$10.50. Additional hose, 30c. per foot.

GARFIELD KNAPSACK SPRAYER. One of the best, strongest, and most effective of all Knapsack Sprayers. The tank is made of heavy copper, slightly concaved to fit the back, and is, therefore, easily carried. The pump is made entirely of brass, double action, has metal valves, and will not get out of

Fig. 255.

Fig. 254.

Barnes Improved Perfection Spraying Pump.

BARNES NEW IMPROVED ALL-BRASS "PERFECTION" SPRAYING PUMP. The Perfection is the simplest and best spraying pump ever placed on the market. It is made of seamless brass tubing without threads on either end, and is held firmly together by a galvanized steel rod connected at the top and bottom parts, and is perfectly tight. Price of Fig. 255, complete, with two nozzles, each, \$4.00; price of Fig. 254, complete, with two nozzles, each \$4.25.

order. Can be used for all sorts of insecticides and fungicides in the Orchard, Field and Garden, and is the cheapest knapsack sprayer made. Price, as shown in cut, \$15.00. Additional hose, 30c. per foot.

LADIES' FAVORITE FLOWER AND PLANT SPRINKLER. This is the neatest Plant Sprinkler yet introduced. It consists of a can holding a quart of water or insecticide, and a hose twelve inches long, with a large rubber bulb containing a fine nickel-plated rose or spray. Price, \$2.00. Rubber Bulb attachment separately, \$1.50.

SHOO-FLY TRI-JET SPRAYER, \$1.00.

STAR INSECT SPRAYER. 50c. each.

Lightning Compressed Air Sprayer No. 30, 2 gallon, \$4.00. No. 21, 4 gallon, \$5.00.

PRIZE SPRAYER. \$4.50 each.

PERFECT SPRAYER. 75c. each.
WORLD SPRAYER. 75c. each.
LIGHTNING DRY POWDER DUSTER.
\$1.25 each.

Ladies' Favorite Sprinkler.

LITTLE ASPINWALL SPRAYER. 75c. each.

SUCCESS WHITEWASH SPRAYER. \$10.00.

Dry Powder Duster. \$1.25.

Use Raffia for Budding, Tying, Etc., Cheaper than Twine and lasts Longer.

GOULD'S BRASS BUCKET OR BOAT PUMP No. 561½.

For Spraying, Sprinkling, Washing Wagons, Windows and Whitewashing.

It is used with a pail or bucket. It is strong, durable, and easily operated. Cylinder, plunger, plunger rod and gland are all brass. The plunger rod operates through an adjustable brass gland which can be tightened so no liquid will escape at that point. The strong iron foothold enables one to pump with one hand and hold the nozzle with the other. Price, with 2½ feet ¾-inch suction, 3 feet ¾-inch discharge hose, spray nozzle and strainer, \$7.50.

SHOO-FLY TRI-JET SPRAY. The cheapest spraying apparatus on the market at the price quoted, and is more effective than many other sprayers at ten times the cost. For spraying potato vines, shrubs, plants and cattle (to keep off flies), and the interior of henneries, it has no equal. Price, \$1.00.

Lewis' Agricultural Syringe.

LEWIS' AGRICULTURAL SYRINGE. This extermiator is 26 inches long by 1½ inches in diameter. It is made of zinc tubing, which does not rust by using strong chemicals. The piston is fitted with Lewis' Patent Extension Valve, which holds the liquid at any point in the tube except on pressure of the handle, when it discharges the liquid on each hill. Price, brass, \$2.50.

KANT KLOG NOZZLE. The only nozzle that can be successfully cleaned without stopping the spray or removing the nozzle from the tree. The first and only nozzle ever made which gives both flat and round sprays, or solid streams. Sprays fruit trees, potatoes, vegetables, tobacco and cotton. For wagons, windows, henhouses, fires, disinfecting, etc. Price, with galvanized steel body, \$5.00; with polished brass body, \$7.50.

GEM NOZZLE SPRAYER. (Brass) for 1-inch hose, \$1.00 each; by mail, 5c. extra.

BORDEAUX NOZZLE. \$1.50 each.

BORDEAUX AUTOMATIC NOZZLE. For spray pumps (fitted for ¾-inch pipe only), \$1.00; by mail, 5c. extra.

THE LOWELL FOUNTAIN COMPRESSED AIR SPRAYER No. 110. For the farmer, fruit grower, stockman, florist and user of general liquid disinfectants and poisons. Made of galvanized steel; pump, automatic valve and valve fittings, filler plug

and collar of brass. Spraying nozzle may be reversed to spray under side of bushes and plants. Valve shut off. An adjustable shoulder strap and tree attachment, with suitable couplings for tree spraying is furnished with each machine. The vine attachment consists of a brass tube curved under the leaves of low plants and running vines will be furnished at 50c. extra. Capacity, 3 gallons. Aluminum finish. Price, \$7.00 each.

THE LOWELL BLOW POWDER SPRAYER. Is made to meet the demand from those preferring dry powder to liquid solutions, and is so constructed with its double screen arrangement that it is absolutely impossible for the machine to clog. Adapted to Paris Green, Bug Finish, Slug Shot, Lice Powder and all dry powder disinfectants and poisons. The powder can hold one quart, and has a two inch screw cap opening in back for filling. Finely finished with aluminum finish. \$1.00 each.

THE LOWELL GRAND SPRAYER. A universal favorite. A general utility sprayer, adapted to all liquid disinfecting and poisonous preparations, as well as for use on cattle, horses, sheep, swine and poultry. Made of heavy charcoal tin, with zinc caps and brass spraying tubes. Capacity, 1 quart. Finely finished with aluminum finish. No. 4, \$1.00 each.

TYRIAN RUBBER PLANT AND FLOWER SPRINKLER. Very handy for sprinkling tender plants, small seeds and cut flowers. 4 oz. Straight Rubber Flower Sprinklers, 75c. each; 6 oz., 80c. each; 8 oz., 90c. each; 10 oz., \$1.00 each. 4 oz. Bent Neck, 90c. each; 6 oz. \$1.00 each; 8 oz., \$1.10 each; 10 oz., \$1.25 each.

BROOKS IMPROVED HAND FORCE AND SPRAY PUMP. A complete hand apparatus for throwing water. Made of brass with steel plunger and 5-ply rubber hose. Price, complete, \$4.75.

DEAKIN'S IMPROVED BRASS GARDEN SYRINGE, AMERICAN. No. A. length of barrel, 12 inches; diameter, 1 inch, with one stream and spray rose. Price, \$2.50.

No. 2. Ladies' Garden Syringe, length of barrel, 14½ inches; diameter, 15-16 inch, with one stream and two spray roses. The two roses, when not in use, are screwed on the side of the barrel. Price, \$5.00.

No. 3. Best Plate Valve Syringe, large size, with one stream, two spray roses and side pieces on barrel. Price, \$7.00.

No. 11. (Second quality.) Length of barrel, 18 inches; diameter, 1½ inches. Open Rose Syringe, full size. Two spray roses and one stream. Side attachment. Price, \$5.50.

DEAKIN'S NEW SYRINGES. The cheapest all-brass Syringes made; full length of barrel of the largest size, 18 inches, 1½ inches diameter. They are all-brass full length syringes, fill quickly and discharge perfectly. Price, letter H, \$4.00; letter K, \$3.50.

CATERPILLAR EXTERMINATOR. For destroying caterpillars and worms in Pecan and other fruit trees there is nothing to equal it, and wherever used gives satisfaction. It is ball-shaped and made of cast iron, no soldering about it, hence can not fall apart. The ball contains a peculiar substance which is soaked in kerosene oil, after which it is placed on a long pole and then ignited. This is slowly passed under the leaves and branches; the heat and resinous smoke arising from same will smother and kill all living insects and worms on the trees. We recommend it highly. Price, \$1.00.

AUTO-SPRAY TORCH. Directions; First remove the burners and fill both reservoirs of torch three-quarters full of kerosene oil, and replace both burners. Place as many extension pipes on the Auto-Spray as may be necessary to reach the worm nests. See that there is no solution in the reservoir of the Auto-Spray. Screw the torch to the end of the extension pipe, and see that all joints are made airtight with rubber packing. Light the wick in pilot torch, shut off the cock, and pump reservoir full of air. By opening the cock and releasing the air, the torch will spread itself, and should throw a flame from two to four feet, according to the air pressure. Price, \$1.00.

ADJUSTABLE RIVAL SPRAYER. Three-quarter inch hose; simple, easy to operate, and best all-round sprayer made. Price, 60c. each; if by mail, add 5c. for postage.

THE LIGHTNING BUG EXTERMINATOR. One of the cheapest and best spraying machines for expelling and destroying Potato Bugs, Codling Moths and Canker Worms, Strawberry and Rose Slugs, Striped Fleas, Cucumber and Melon Beetles, etc. It is light, yet strong, and with proper care will last many years. Very good for applying the Japanese Soluble Insecticide. Price, \$2.25.

Lightning Bug Exterminator on pole, \$3.00.

RIPPLEY'S WHITEWASH AND PAINTING MACHINE. (Sold under a guarantee.) Painting and whitewashing by machinery is an accomplished fact, and reduces the cost of whitewashing and painting to a minimum. By its use the Dairy-men, Poultrymen, Farmers, Breeders, Liverymen, Millers,

and parties running factories, warehouses, etc., can whitewash or paint all the buildings in a very short time, doing first-class work. Prices as follows:

No. 6, 8-gallon, Galvanized Iron Machine, with all attachments..... \$13.00
No. 7, 16-gallon, Galvanized Iron Machine, with all attachments..... 16.00

INSECTICIDES.

STECKLER'S TOBACCO DUST. One of the most effective agents against the cabbage fly and worms, which are so injurious to and destructive of cabbage and cauliflower plants, and also for cucumbers and melons. Used by the largest cucumber growers in this vicinity with satisfactory results. We have had opportunity to have a thorough test made of our Tobacco Dust on chicken lice, and have found it to be the best insecticide for henneries, under setting hens, etc. We have had it tested by a number of poultry men, who pronounce it to be the best agent against poultry vermin. 10c. per pound. If by mail, add 9c. per pound postage. 3 pounds 25c.; 10 pounds 80c.; \$2.50 per 100 pounds; \$23.00 per 1000 pounds, put up in sacks. Price on tons given on application.

TOBACCO STEMS. Next to our fine Tobacco Dust the stems are extensively used as an insecticide by thoroughly boiling them down to a strong decoction, thus extracting all the strength from them, using the liquid for spraying. The stems are also strewn around the plants, permitting the rain and sun to strike them, which causes a kind of suffocating steam to emanate from them, killing all insects infecting the plant. Price, 10c. per pound; packed in oat sacks at \$2.50 per sack.

"NICO-FUME" TOBACCO PAPER is so well known to florists and horticulturists throughout the country that detailed comment is doubtless unnecessary; our claim being that Nico-Fume Paper is the "strongest, best packed and easiest applied" tobacco paper on the market—the sheets being folded and punched, ready for use, thus saving labor and loss of strength through evaporation while handling. Prices:—

Can containing 24 sheets	- - - -	\$0.75
Can containing 144 sheets	- - - -	3.50
Can containing 288 sheets	- - - -	6.50

STECKLER'S TREE WASH. For insects, ants, scale, etc., on orange and other fruit trees. Twenty pound package will make fifty gallons of insecticide. Always strain before using. Use sediment for fertilizing. Price, 10 pound package, 80c.; 20 pound package, \$1.50.

STECKLER'S INSECT SOAP. A sure preventive for lice scale, also all other insect pests on all kinds of foliage plants. Price, 25c. a package.; by mail, 30c.

STECKLER'S GLUBO

TREE PROTECTOR AND INSECT DESTROYER. To be mixed with water to the consistency of white-wash, and applied with a spray. Fruit trees, plants and vegetables of every description, if drenched with a solution of it, will be rid of all insects and at the same time their growth promoted. Has the reputation of being the best Tree Fertilizer and Wash in use. Has been advantageously used in vegetable gardens; and especially on cabbages, for the prevention and destruction of worms and slugs.

Price, \$3.00 per barrel of 300 pounds weight. The cheapest and best on the market.

TREE STICKY. Will positively prevent all creeping insects from injuring shade and fruit trees.

One-pound can	30 cents
Three-pound can	85 cents
Ten-pound can	\$2.65

Aphine has no equal as a general insecticide for greenhouse and outdoor use. It destroys Green, Black and White Fly, Red Spider, Thrips, Mealy Bug, White and Brown Scale, and does it effectively. It does not injure the tenderest flowers or foliage; in fact, it contains some excellent fertilizing qualities, invigorating to plant life. It can be safely applied to fruits and vegetables. Used as a spray. It is readily soluble with water. Aphine is endorsed by eminent entomologists and floriculturists. \$2.50 per gallon, \$1.00 per quart, 65c. per pint, 40c. per half pint.

HAMMOND'S SLUG SHOT. An excellent article for destroying cabbage fleas, green lice, turnip and beet fly, potato bug, grub worm, etc. It is ready for use, and only requires to be dusted onto the plants while they are wet with the dew in the morning; or, when applied in the evening, plants should be watered over the leaves half an hour before the Slug Shot is applied. Five-pound packages, 40 cents; in bulk, \$7 per 100 pounds. Single pound, 10 cents. Have Dusters for distributing the above powder. Price, 1 gallon size, 60 cents; ½ gallon size, 50 cents. Hammond's Bellows for Slug Shot, \$2.00 each.

TRADE MARK.

REGISTERED IN U. S. PATENT OFFICE

Target Brand Scale Destroyer.

TARGET BRAND SCALE DESTROYER. For white fly, orange scale, oyster shell scale, oleander scale, red scale, black scale, soft scale, young San Jose scale and scurvy bark louse, on orange and citrus trees, as well as mites, aphids and other lice, on house plants, rose bushes, etc. Prices, 1 gallon can, \$1.00; 5 gallon can, \$3.75.

New Orleans Market Cucumber Should be Planted Before any Other.

FIR TREE OIL. For destroying all kinds of insects and parasites which infest plants, whether at the root or on the foliage, such as Green and Black Fly, Mealy Bug, Thrip, Red Spider, Brown and White Scales, Aphids, Ants, etc. Price, $\frac{1}{2}$ pint, 60c., 1 pint, 90c.; 1 quart, \$1.60; gallon, \$5.00.

KING OF GERM KILLERS. The most powerful disinfectant in the world; odorless. 25c. per package.

PARIS GREEN. Mixed at the rate of one pound to two hundred gallons of water, it will prove effective against all chewing insects. Put up in 1 pound packages only at 50 cents per pound. This article is liable to fluctuate in price.

SCALEHOLD. For destroying all kinds of insects and parasites which infest plants, whether at roots or on the foliage, such as Green and Black Fly, Mealy Bug, Thrip, Red Spider, Brown and White Scale, American Blight, Woolly Aphids, Ants, Grubs, Worms, Wood Lice and Scale on deciduous and evergreen trees. To be used as contained in package with the Shoo-Fly Sprayer or Watering Pots. Quart bottle, 25c.; one gallon, 75c.; five-gallon can, \$3.00. Can not be sent by mail.

DALMATIAN INSECT POWDER. Good for Roaches, Moths, Ants, etc. Price, 15 and 25 cents per package.

SULPHUR TOBACCO SOAP. Destroys all kinds of insects on live plants; 25c. per pound box.

WHALE OIL SOAP. Very effective for washing trees and destroying all insects on the bark; it is also an exterminator of insects and lice on plants and shrubbery. Mix at the rate of one pound soap to two quarts of hot water, and then add 5 gallons of cold water; apply with watering pot or syringe; used in this manner it will promptly rid cabbage or any other vegetable plants, also rose bushes and all sorts of fruit trees, of the aphides and other insects which so often injure them. Price, 1 pound boxes, 20c. In bulk, 15 cents per pound. If sent by mail, 9 cents per pound must be added.

JAPANESE SOLUBLE INSECTICIDE. This is the safest, surest and best insecticide ever brought before the public. It is a sure remedy for Cabbage worms, Turnip and Beet fleas, rose lice, green fly, scale, mealy bug, red spider, aphids, etc. For green house, conservatory, garden and field use it has no equal, and is sure death to insects. Sold only in 1 pound packages at 25c. By mail 15 cents extra. Full directions on every box. We are the sole agents for the United States.

PYRETHRUM OR PERSIAN INSECT POWDER. A standard insecticide used in green houses on all kinds of plants, on chrysanthemums for thrip, and used very effectively on all flowering and vegetable plants. Sprinkled on cabbage plants, against the cabbage worm, it is very efficacious. By burning in rooms it can be made to drive away mosquitoes, etc. Harmless to plants or animals. $\frac{1}{4}$ pound, 15c.; 1 pound, 50c. If by mail, add 10c. additional for postage.

Steckler's Fungicide

We take great pleasure in introducing to our patrons a formula to be used as a spray that is one of the most valuable preventives and remedies for the various forms of rust and mildew ever introduced, being, as it is, non-poisonous and absolutely non-injurious to the most sensitive form of plant life. The various forms of mildew and rust are positively controlled on melons, cucumbers, tomatoes, egg plants, etc., while the same troubles are equally as easily subdued on fig, peach, plum, apple, and all kinds of fruit trees, sweet olives, cape jasmines and all deciduous trees. It should be applied about every two weeks or following each excessive rain. It will not discolor the most delicate fruit, and can be used with great freedom. Prices, 1 pint, 15c.; 1 quart, 25c.; $\frac{1}{2}$ gallon, 40c.; 1 gallon, 60c.; 5 gallons, \$2.50. Cannot be sent by mail.

WOODASON'S BELLOWES. Double Cone, for insect powder; \$3.50.

Single Cone, for insect powder; \$1.50.

Atomizer, for liquid and powder; \$2.50.

FORMULA TO PREVENT SCAB, BEETLES AND BLIGHT ON POTATOES.

Potato Beetles, Scab, Blight. First Application: For Scab, soak seeds in corrosive sublimate solution, 2 oz. in 16 gallons of water for 90 minutes. Second Application: When beetles or the larvae appear, Paris green, 1 pound to 200 gallons of water, or preferably, arsenate of lead, 2 pounds to 50 gallons of water. Third Application: Repeat whenever necessary. Fourth Application: When blight of the leaves is accompanied by rot of the tubers, Bordeaux. Fifth Application. Repeat if necessary.

The following mixtures have been found to be very effective in destroying all parasites and insects on fruit trees:

KEROSENE EMULSION. This solution is used with great success in killing all sucking insects, such as scales, plant lice, and above all, the destructive Icerya Purchasi Maskell, or Cottony Cushion Scale, on orange or other fruit trees.

This formula will be found the best: Dissolve half a pound of Whale Oil Soap in half a gallon of boiling water; then add 1 gallon of kerosene oil, churn the

Flowering Annuals to be had in their planting season.

mixture with a force pump until it forms a cream, which thickens upon cooling. For scale insects, dilute 1 part of the emulsion with 9 parts of water.

AMMONIACAL CARBONATE OF COPPER SOLUTION. Dissolve 3 ounces of copper carbonate in 1 quart of liquid ammonia and dilute to 27 gallons.

ARSENATE OF LEAD. Use paste in proportion of 2 pounds to 50 gallons of water, thoroughly mixing paste with small quantity of water first, and then diluting to proper strength. For such insects as cotton caterpillar, boll worm, etc., the powder form is preferable, but liquid should be used for fruit trees. A splendid insecticide for all leaf-eating insects.

BORDEAUX MIXTURE. Dissolve 4 pounds of powdered sulphate of copper in 4 gallons of boiling water. Slake 6 pounds of fresh lime in 4 gallons of hot water; mix both solutions thoroughly by pouring them together into third vessel so that the two streams will intermingle as they fall. Then strain them through a fine sieve, and before using dilute to 50 gallons, being sure to keep solution well agitated while applying.

GRASSELL'S ARSENATE OF LEAD PASTE. 600 lb. bbls., 13c. per lb.; 100 lb. kegs, 14c. per lb.; 50 lb. pails, 15c. per lb.; 25 lb. pails, 16c. per lb.; 12½ lb. pails, 17c. per lb.; 5 lb. pails, 18c. per lb.; 2 lb. glass jars, 19c. per lb.; 1 lb. glass jars, 20c. per lb.

GRASSELL'S POWDERED ARSENATE OF LEAD. 100 lb. kegs, 30c. per lb.; 45 lb. pails, 31c. per lb.; 20 lb. pails, 32c. per lb.; 5 lb. pails, 33c. per lb.; 1 lb. tins, 34c. per lb.

GRASSELL'S BORDEAUX MIXTURE PASTE. 500 lb. bbls., 6c. per lb.; 100 lb. kegs, 7c. per lb.; 45 lb. pails, 8c. per lb.; 20 lb. pails, 9c. per lb.; 10 lb. pails, 10c. per lb.; 5 lb. pails, 11c. per lb.; 2 lb. glass jars, 12c. per lb.; 1 lb. glass jars, 13c. per lb.

GRASSELL'S BORDEAUX LEAD ARSENATE MIXTURE PASTE. 500 lb. bbls., 12c. per lb.; 100 lb. kegs, 13c. per lb.; 50 lb. pails, 14c. per lb.; 25 lb. pails, 15c. per lb.; 10 lb. pails, 16c. per lb.; 5 lb. pails, 17c. per lb.; 2 lb. glass jars, 18c. per lb.; 1 lb. glass jars, 19c. per lb.

GOOD'S CAUSTIC WHALE OIL SOAP. Per barrel lots (about 450 pounds), 7½c. per pound. Less quantity, \$1.25 per gallon.

Empty Cans for Same—1 gallon 30c. each; 2 gallons 40c. each; 3 gallons 50c. each; 5 gallons, 75c. each.

JAPANESE PLANT FOOD AND FERTILIZER. (Odorless). This is a safe and high grade plant food and fertilizer, prepared especially for potted plants and out-door use. It is truly a wonderful invigorator, producing luxuriant foliage of rich texture, large, perfect and more brilliant flowers and strong, healthy plants. Sold only in 1 pound packages at 25c. By mail 15c. extra. We are the sole agents for the United States.

POTTING SOIL.

Specialy prepared for Horticultural purposes, either in green houses or garden. Price per 100 pound bag, \$1.50; 50 pound bag, \$1.00; 25 pound bag, 75c.; 10 pound package, 50c., 5 pound package, 30c.; single pound, 10c.

STECKLER'S LEAF MOLD. All plant life thrives in it. Admirably adapted for raising Seedlings, Cuttings and general Conservatory and framework, increases the size of the flowers, gives substance and enduring qualities, insures brilliancy and intensity of color. Specially suited for hanging baskets, because of its lightness and freedom from drip; less frequent watering required. Bedding out plants grown with Leaf Mold will resist long continued drought. Excellent for Tomatoes and Strawberries. Fruit Trees can be grown in pots and brought to the greatest perfection. This is the stuff, in combination with Japanese Plant Food, to grow your large Chrysanthemums in. Clean to handle, and therefore specially suitable for window boxes and for growing flowers at home. Price per ton, half ton or quarter ton, 2c. per pound; single bag, 125 pounds, 3c. per pound, 25 pounds \$1.00; 10 pounds, 50c.; 5 pounds, 30c. 1 pound, 10c.

✓ DIRECTIONS FOR PLANTING AND CULTIVATING COTTON.

Thoroughly break and prepare your land early, having the rows 3½ to 4 feet wide, and hill 12 to 14 inches apart in drill. When the cotton comes up plow it deep while it is small, in order to let the heat of the sun strike through the beds. As it gets larger shallow down, and towards the last plow very shallow with wide sweeps. Always keep the top crust

of the ground broken in dry weather, as it prevents it from losing its forms, but plow very shallow. Never stop plowing for wet weather until the ground turns in slices; then quit immediately until it dries off. Never lay-by until the middle of August. The most successful time we have ever had in planting for a big yield was on the 5th and 6th days of April; in fact, the first week in April is the best time for planting cotton for good results. One bushel of cotton seed required to plant an acre of land.

All of our Cotton Seed is grown in Georgia, and is free from Boll Weevil. These are all good varieties which have been thoroughly tested and recommended by Agricultural Colleges and Experiment Stations of the Southern States.

SEA ISLAND COTTON. Extra long staple; line $1\frac{1}{2}$ or $1\frac{3}{4}$ to 2 inches. Seed black and lintless. Plant $\frac{1}{2}$ bushel to acre in row—5-foot rows, 3-foot drill. The famous Sea Island cottons off the South Carolina-Georgia coasts are known all over the world. We get our seed there. Product of this cotton is usually twenty 350-pound bales on 25 acres. Tall bush; yield about 30 pounds lint for 100 pounds of seed. This lint usually brings about three times the price of short staple. Highest-priced cotton lint in the world. \$3.50 per bushel of 40 pounds.

MEBANE'S EARLY TRIUMPH BIG BOLL COTTON—(Short Staple). For Boll Weevil Lands. Originated in Texas. Big boll; in fact, an immense boll, 46 bolls making 1 pound of seed cotton. Earlier

than most big boll cottons. About 39 per cent. of lint at the gin. Seed fuzzy, medium in size, brownish and greenish-white, with some green seeds, showing its hybrid character. Storm resistant. This variety has been especially satisfactory in regions infested with the boll weevil. \$1.75 per bushel of 30 pounds.

SIMPKINS' EARLY PROLIFIC COTTON—(Short Staple). Resembles the King's, but is earlier by ten days, and bolls are larger, and it gives much larger yields both in field and at the gin. The superiority of this cotton over all others consists of its extreme earliness and heavy fruiting; has long limbs, which come out at the ground; has close joints and small seed, and yields 40 per cent. lint at the gin. \$1.75 per bushel of 30 pounds.

TOOLE COTTON. (Short Staple.) Low bush; shapely height; plant close; 87 bolls to 1 pound seed cotton. Can be planted 15 to 18 inches in row and 2 stalks to hill. Three large limbs near roots parallel with the ground. Magnificently productive. Comes early and holds on fruiting until late. Fine results on poor land. No other cotton so prolific in field or at gin. \$1.75 per bushel of 30 pounds.

KING'S EARLY IMPROVED COTTON. This short staple Cotton has wonderfully increased in popularity. It is extra early, wonderfully prolific, long limbed, seed small, lint 36 to 40 per cent. \$1.75 per bushel of 30 pounds.

Special prices on large quantities of any of the above Cotton Seed.

PEANUTS.

SPANISH PEANUTS.

As a money making crop, as a crop that replenishes the soil, and as a crop that may follow others on the same land with safety, the peanut has proved its worth to the South and particularly to the lands of Mississippi and Louisiana where the boll weevil has made the production of cotton more or less of a venture.

The growing of the Spanish peanut for commercial purposes is no longer an experiment. In the last few years and particularly the year of 1910, it has been shown that this variety is particularly adapted to the climate and the soils of these Southern States. As a consequence thousands of acres will be planted to peanuts the coming season, and prosperity will again look boldly in the face of the farmer who grows them.

Peanuts are a benefit in many ways to the farmer. They not only produce enough tubers to pay a handsome profit to the grower, but they enrich the soil. And not only that but they provide enough hay from the vine to pay for the cost of growing them, including seed and cultivation, so that the net crop itself is clear profit.

While there are many varieties of this nut that can be grown on these Southern soils, the man who seeks the greatest profit chooses that variety that does the best and is in demand by the mills that turn out peanut oil, butter and other food products. It seems that these mills cannot get enough of these nuts of the Spanish variety, which it has been found are the richest in the oils and that there cannot possibly be an over-production. Consequently it is probable that for years to come there will be no great decrease in the market price of the nuts. The crop is also a reasonably sure one. That is, the ordinary farmer can produce an abundance of the

Spanish Peanuts.

nuts from a given acreage by practicing the most simple rules.

There is already a marked demand for the seed for the coming season and, while we have secured a great quantity of the very best seed, it would be the part of wisdom to place your orders at once. With the present campaign that is being waged all over the South, there is no telling what the spring demand will be, so that it is the safest plan to be prepared to plant when the proper time comes by having your seed at hand.

Spanish Peanuts can be cultivated entirely with a plow, and are easily gathered, as all the peas hang close to the roots. The stems when harvested make a good hay. The fruit is smaller than the Virginia or Tennessee, but the plants yield heavier. Price, per pound, 20 cents; by mail prepaid, 30c.; per peck, 75c.; per bushel, \$2.50.

STECKLER'S WHITE MAMMOTH PEANUTS. This is the largest peanut ever introduced. The pods measure on an average $2\frac{1}{4}$ inches in length and $1\frac{1}{4}$ inches in diameter. Thick shelled and deeply ridged. The kernels are of light color, $1\frac{1}{8}$ inches long and $\frac{1}{2}$ inch in diameter, which would easily be mistaken for small pecans. Although of wonderful size, its bearing qualities are still more wonderful. It is known to yield on an average of 1 gallon of peanuts to one kernel planted, making it the most prolific and largest peanut known. $\frac{1}{2}$ pound, postpaid, 25c.; 1 peck, measured, \$1.75; $\frac{1}{2}$ bushel, measured, \$3.00; 1 bushel, measured, \$5.00.

PEANUTS OR GOOBERS. Goobers seem to do best on a fairly dry, light, sandy soil. They are pre-eminently the "hog feed" for sand hill and high pine land, though they will do well on most any land. Plant in rows $3\frac{1}{2}$ or 4 feet apart, and about 10 inches apart in the rows, at any time from March 1 to June 1, when the ground is moist enough for planting corn. Cultivate the same as Spanish Peanuts, which they resemble in growth. Let the hogs into them when the leaves turn quite yellow. On new ground, drop the goober in every other furrow as you break the land, and they will make a good crop without cultivation.

Have also the White Virginia and Red Tennessee Peanuts in stock. They are larger in size than the Spanish kinds. They are of a spreading habit, and are cultivated in ridges like sweet potatoes. Price of White Virginia is 10c. per pound. Price of Red Tennessee is 15c. per pound. If by mail, 9c. extra.

AMOUNT OF PEANUTS REQUIRED TO PLANT AN ACRE. Planting peanuts in 3 feet rows, 20 to 24 inches in drill, requires about a bushel per acre. This is varied by circumstances. Some double drop or put two in a place and use more, but one bushel per acre is about the correct amount.

White Virginia, Red Tennessee and Spanish Peanuts are usually planted in the hull. Mammoth Peanuts are usually shelled to be planted.

CHUFAS (Cyperus Esculentus)—Hognut; Ground Almond. Perennials. Georgia grown seed, 44 lbs. bushel. Be sure and get supply in January. Demand always consumes supply before April 1; plant 1 peck per acre as late as June; soak seed a week; plant 12 inches apart in rows two and a half feet apart; do not bed or hill up; give two plowings and hoeings. If you get a bad stand pull out shoots from growing plants and plant and use these. Grow just under the surface like all grass nuts. Invaluable for fattening hogs; turn hogs in patch. Matures in October and lie in ground till eaten; hand gathering slow and expensive. Grows best on well manured, sandy soil; 50 to 100 bushels per acre. Price, 35c. per lb., \$1.25 peck, \$5.00 per bushel.

UPLAND AND LOW LAND SEED RICE. These are the only varieties for our Southern soil. Genuine Imported Honduras Seed Rice, \$1.00 per peck, \$2.50 per bushel, \$6.00 per barrel of 162 pounds. Imported Choice Carolina Seed Rice, \$1.00 per peck, \$3.00 per bushel, \$6.50 per barrel. Japan Rice, \$1.00 per peck; \$2.50 per bushel; \$6.00 per barrel. The standard weight of Rice is 44 pounds per bushel.

DIRECTIONS FOR PLANTING UPLAND RICE.

On lands that hold moisture well, such as waxey or post oak land, plant anywhere. On dry or sandy land rice is planted in the low places. Prepare the land and cultivate as for corn, except the rows are only 22 to 24 inches apart, so that one furrow in each middle, with an 18-inch sweep, usually suffices for a working, and the hills just far enough so it can be hoed. Plant as early in April as you can. Furrows are opened and the seed covered in any way most convenient at the time, just so the seeds get a little dirt over them. Drop 15 or 20 seed in each hill and leave all that come up. Cultivate for moisture and to keep down grass and weeds until rice begins to head. It usually ripens last of August or early in September. The color tells when it is ripe.

The required quantity of rice to plant one acre, ordinary alluvial soil, is 3 bushels of 44 pounds to the bushel, or 132 pounds. Some planters have a tendency to plant less, but a good stand cannot be had unless this much is planted.

FENNEL FLORENCE OR NAPLES—(Feunoul de Florence, Finocchio di Napoli). Culture: Sow in spring in rows 16 to 20 inches apart. Thin out so as to have the seedlings 5 to 6 inches, and water as plentifully as possible. The plant is usually eaten boiled. In flavor it resembles Celery, but with a sweet taste and a more delicate odor; 5c. and 10c. papers; $\frac{1}{4}$ pound, 30c.; per pound, \$1.00.

MOSQUITO HEAD NET. We have in stock a long felt want in the Southern country, a peace-maker, where a person can attend to his business without being annoyed by the mosquito pest. We have two makes. They are both good.

Wood's Mosquito Head Net, \$1.00.

Ward's Mosquito Head Net, \$1.00.

French Mushroom

Spawn.

HOW TO CULTIVATE MUSHROOMS—Mushrooms may be grown almost anywhere and at any season of the year, so long as the conditions required are reasonably considered.

During the Summer months they may be grown out of doors and an abundant supply secured at a trifling expense. The location should, in all cases, be rather dry than damp, and a uniform temperature as nearly 75 degrees as possible is of primary importance. Full directions, etc., accompany every pound. Price, 60 cents per pound. Postage 10c. extra.

NOVELTIES AND SPECIALTIES

Mayflower Peach

The earliest peach—earliest to ripen and earliest to bear; the latest bloom. Color, red all over. Fruit medium to large, slightly oblong and pointed; juicy and good. Most of the very early peaches are lacking in color, while the Mayflower is a beautiful solid red, which makes it sell well on the markets. On account of blooming later than most varieties, thus getting killed by late spring frosts, it sets too much fruit and in order to keep it from overbearing, and to have large fruit, it is very necessary to thin this variety. Pull off the young peaches to three or four inches apart when they are about the size of the end of your finger. We could write two pages on the merits of the Mayflower, but as it is becoming generally known, we deem the above sufficient. First week in June. Price \$1.00 each.

Magnolia Fig.

The most prolific and popular fig grown. Fruit is large, white or pale green. The tree bears early and are vigorous. It has the distinction of being one of the finest and at the same time the scarcest fruit in the market, and the great demand renders the field all the more inviting to the prospective planter of a commercial orchard. The farmer of the Gulf Coast Country holds

the key to the situation, and while thousands of fig trees are being planted each year, there still remains a vast tract of fertile virgin soil well adapted to their production, and there are many hundreds more of wide-awake, progressive farmers who find that the raising of figs will not only yield them a handsome profit, but will contribute millions of dollars to the country as well. Price \$1.00 each.

St. Louis Perfection White Bean.

An early maturing, white seeded pole bean, very desirable for snaps and certainly unsurpassed green shelled. Vine vigorous and very productive; pods round, very long, irregular in shape and quite stringless. The beans when shelled green are large, very tender and white, a very desirable feature when comparison is made with the colored beans of other varieties of this class. Many of the most successful gardeners about St. Louis consider this bean by far the most desirable pole bean yet offered. Pint, 40c; quart 75c; gallon \$2.50; peck \$4.50. Indian Chief or Pole Black Wax Bean.

A black-seeded wax variety with thick, golden-yellow pods. Very hardy and prolific. One of the most popular of the Pole Wax Beans. An old standard which has been planted for a quarter of a century. Price 40 cents pint, 75 cents quart, \$2.50 gallon, \$4.50 peck.

The "Burpee-Improved" Bush Lima Bean.

The pods are truly enormous in size—borne abundantly and well filled with handsome beans which are both larger and thicker than those of the popular Burpee's Bush Lima,—and fully eight days earlier. The "Burpee-Improved" is a distinct "New Creation" by nature, and not merely an improved selection developed by man. It differs from the best strains of Burpee's Bush Lima in having uniformly much larger pods, producing more beans, while both pods and beans are not only larger in size but also considerably thicker. The growth is even more vigorous, with heavier foliage. The plants are uniformly upright. Full-grown bushes measure 30 inches in height and

23 inches across the top. The blossom-bearing stalks are thrown well out from the foliage and the pods are frequently borne in what might be called "clusters" of from 5 to 8. The "Burpee-Improved" produces magnificent crops of pods which measure from 5 to 6 inches long by $1\frac{1}{4}$ inches wide. As compared with Burpee's Bush Lima, both pods and beans are very much larger, while the beans, either green or dry, are nearly twice as thick. Even when of full size the enormous beans are of the most delicious flavor; they are ready to market eight to ten days earlier. The Burpee-Improved Bush Lima will outyield Burpee's Bush Lima by fully one-third. This greater yield is due to the increased size of both pod and beans. The dried beans are very handsome and generally show a greenish-white coloring, while dried beans of the Burpee Bush Lima, like those of the Large Pole Lima, are pure white. Price pint 50 cents, quart \$1.00, gallon \$3.00.

Fordhook Bush Lima Bean.

The only stiffly erect Bush form of the popular "Potato" Lima. Fordhook Lima is altogether unique, and has created the greatest sensation of any vegetable ever presented. Until its introduction three years ago, nothing like it had ever been seen. Fordhook Lima is of stiffly erect habit, branching freely, but with all the branches held upright, has foliage like that of the large pole Limas. The leaves are large, smooth and a dark rich green—identical with the leaves of the original Burpee's Bush Lima. Fordhook Lima bears tremendous crops. The beans are ready for use as early as those of Burpee's Bush Lima, which furnishes fine Lima beans for the table three weeks earlier than they can be had from most pole varieties. The plump well-filled pods are twice as large as those of Bush Limas, while the individual beans are also fully twice the size. The handsome pods measure four to five inches in length, containing four to five large beans each. Fordhook Bush Lima produces such large "Potato Limas" that private planters and market gardeners everywhere have been astounded. The large beans are very "fat" and lie so closely together in the pod that they are flattened on the ends. The pods are so closely packed that the beans are very easily shelled. Fordhook Lima has an additional merit over all other varieties of the "Potato Lima" type. The green

beans, even when of full size, are tender, juicy and sweet in flavor when cooked, resembling the flavor of the finer varieties of large flat Lima—as distinct from the rather dry and mealy character of all other varieties of the Potato, Challenger or Lima type. Price pint 40c., quart 75c., gallon \$2.50.

White Navy or Boston Beans.

Largely grown in many sections as a commercial bean. Beans are pure white, small, nearly oval in shape. Vines are very prolific, producing a large bulk of shelled beans per acre. Known in the East and West as the variety principally grown for baking purposes, and called on the most delicate markets in these sections as Boston Bake Bean. Equally as good in the South as in the East and West. Price pint 25c, quart 50c, gallon \$1.50.

Southport Red Globe Onion.

This is the handsomest and most richly colored of all red onions. Perfectly globe-shaped, the onions measure two to three inches in diameter. Remarkably uniform in size and form, with the dark, rich coloring, they make a most attractive appearance. The plants are thin-necked, ripening down to a hard, solid ball—insuring the largest percentage of market onions and of the best keeping qualities. This stock has been produced from fine market onions of the best form and richest coloring. We recommend it as the best that can be produced and sure to yield a most satisfactory crop under favorable conditions. Price, 25c oz., 75c $\frac{1}{4}$ lb., \$2.75 lb.

Early Detroit Tomato.

There has been considerable demand in recent years for a tomato similar to Beauty but earlier maturing. We have had in trial each year many tomato novelties for which much has been claimed, but in several important particulars none has equalled the Early Detroit. The vine is more vigorous than that of Acme and is more productive. Not only are more fruits produced, but they average more nearly globe shaped, are heavier and are equally as firm, smooth and suitable for shipping. The fruits are of good size throughout the season, which is unusually long for so early a variety. We are confident that this rare combination of very desirable features will soon bring Early Detroit into general prominence as the best tomato of its class. Price 50c. per oz.

Oklahoma White Wonder Corn.

The king of all corn. It grows under conditions that kill all other varieties. It is, as its name implies, a white variety. Its good points are so numerous that were we to detail them all, one by one, our readers would think we were exaggerating the facts. But this corn is grown in every part of the country and is pleasing every one that has planted it. It is grand and good and reliable—a veritable mortgage lifter. It makes the prettiest stand of any corn we have ever seen. The stalks grow from ten to thirteen feet in height and are exceedingly thick, with short and heavy

joints. They are moderately thick from ear to tassel, thus escaping the disaster which so often overtakes weak corn in times of heavy winds. The foliage is abundant, and the leaves thick and broad. The foliage starts while the corn is still young, which gives an unusual amount of shade to the ground. This saves the moisture. In addition the size and abundance of the leaves insures a large yield of splendid fodder. Every ear will be found perfect. Price, pint 15c, quart 25c, gallon 60c, peck \$1.00, bushel \$3.00.

Maximum or Immensity Lettuce.

A very large variety, one of the largest of the cabbage sorts and almost a third larger than California Cream Butter, which it resembles in color and shape. It is especially adapted for planting in the fall and winter, and makes a fine, tender, buttery head. A number of our best local market gardeners have been growing it and find it unsur-

passed for a fine, heavy shipping variety. Price, 25c oz., 75c $\frac{1}{4}$ lb., \$2.50 lb.

Prize Head Lettuce.

A decidedly crisp variety, strictly bunching, large, early marketable, but intermediate in time of attaining fullest development; slow to shoot to seed.

Plant spreading, low-growing, and consisting of a loose, rounded, or slightly flattened cluster of leaves, generally more or less open or spread out at the center and therefore never in the least cabbage-like nor solid, though nevertheless the inner part of the plant is well blanched. Leaves short spatulate in shape, much blistered and crumpled, very little twisted, fairly rigid, but not stiff; finely serrate at margins, excessively developed and much frilled at borders. Color, bright brown, varying to bright green in less exposed parts and center of plant. Border of leaves no more colored than other parts, while stem of plant, base of midribs, and inner heart leaves are wholly green, and no part of plant is distinctly spotted. Quality good; sweet in flavor, very tender and crisp in texture, but leaf thin and lacking in substance. Seeds large, whitish. Price, 25c oz., 75c $\frac{1}{4}$ lb., \$2.50 lb.

Vetiver.

(*Andropogon Squarrosus*.)

Planted chiefly as a source of Vetiver Oil, an ingredient in Perfumery, as it is aromatic, balsamic and persistent in odor, suggesting sandalwood and myrrh. The culture of vetiver is very simple. After preparing the ground by plowing fertilizing with a little manure, and harrowing (no hills or furrows being made), the plants are planted 3 to 4 feet each way, and are simply left to grow. When the tops begin to dry, in November, the entire plant is dug out, and the roots are cut as close as possible to the plant, washed and dried in the shade. The plant or stub is now either divided into several pieces before replanting or is replanted whole. Price 25c per plant, \$2.50 per dozen, divided plant.

Steckler Co.'s Mixed Lawn Grass.

For lawns of any extent we recommend this our best mixture. We have combined all the most suitable varieties that are necessary for making a beautiful lawn. It is the best proportioned mixture of grasses in the South. Three bushels to acre.

Steckler Co.'s Grass Seed Mixture.

For meadows and pastures.—No. 1, for light soils; No. 2, for heavy soils; No. 3, for shady soils. When ordering, please state condition of soil and location; 3 bushels per acre.

Steckler Co.'s Special Hog Pasture Mixture.

Makes one of the best pastures for hogs. Three bushels per acre. See Price List on Red Pages.

SOUVENIRS OF LOUISIANA.

We can furnish to our friends the following Louisiana products:

Louisiana Cotton Bolls, open, showing the growth of the Cotton, at 5c. per boll, or 6 for 25c.

Louisiana Honduras Rice, in the hull, in sheaves, at 50c. a bunch.

Louisiana Sugar Cane, 10c. each; \$1.00 per dozen.

Regarding the production of Sugar Cane, the average tonnage at Reserve in 1907 was 20 tons to the acre, and the average of syrup per ton was 22 gallons.

SPECIAL NOTICE TO PLANTERS.

For early feed plant either German Millet, Amber or Orange Sorghum, Improved Yellow Leaming, White St. Charles, Golden Dent, and Golden Beauty Corn.

In forage grasses, Improved Lucerne or Alfalfa Clover, Red or White Clover, Crimson Clover, Dwarf Essex Rape or Hairy Vetch.

For a genuine all around pasture grass, Lespedeza Striata or Japan Clover. These will save the planter over fifty per cent on his feed bill.

DAHLIAS.

The following is a collection of Large Peony-flowering Dahlias, improved varieties introduced by Mr. Wm. Pfitzer of Germany. We feel that every lover of flowers should have a few of these elegant specimens:

La Belle, large, white, suffused blush or shrimp pink, at 30c. a bulb.

Big Chief, bright, rich crimson, margined maroon, very effective; at 40c. a bulb.

Sensation, the most striking and sensational of this type; bright vermillion, heavily tipped white; at 50c. a bulb.

If by mail, add 5c. for postage.

Poultry and Live Stock Department.

While we have been filling orders for eggs for several years, we find that they do not bear transportation with safety and satisfaction, hence we advise our customers and friends to order poultry instead. In the event that eggs are ordered, we want it fully understood that we are not responsible for the eggs after they leave our establishment as to unfertility due to transportation.

Maltese Cats.

Fine house pets and best ratters. Price Kittens, \$5.00 each. Pair, \$9.00. Full grown male, \$8.00; Female \$6.00; Pair, \$13.00.

Angora Cats.

Males, \$15.00; Females, \$12.00

Guinea Fowls.

Fine yard birds, blue gray in color. Price, Hens, 75c. each; Cocks, \$1.00 each.

White Guineas — Hens, \$1.50; Cocks, \$2.00.

Pit Games.

We breed the following strains: War-horses (black reds), Arkansas Travelers, Round Heads (dark reds), Greys, Cocks, \$7.50; Hens, \$3.50; Stags, \$5.00; Pullets, \$3.00. Eggs \$2.00 per setting (13). These fowls are bred from winners in the pit for generations, and are unsurpassed as fighters.

Gaffs.

No. 2, \$7.00; No. 2½, \$7.00. Gaffs are used to put on Game Chickens for pit fighting.

Guinea Pigs.

These pigs are not Hogs, but pet animals similar in shape to the Hog, but weighing about 1 pound. It is not an edible Hog, but a pet pig. \$2.00 per pair.

Peacocks.

Pea-Fowl (Lat. Pavo.)

This magnificent bird is not a native of this country, but has been domesticated in England for many years. The gorgeous plumes that adorn the Peacock do not compose the tail as many suppose, but are only tail coverts. The tail feathers themselves are short and rigid

and serve to keep the train spread, as may be seen when the bird walks about in all the majesty of his expanded plumage. No collection of Poultry is complete without one of these magnificent birds. Price, \$20.00 per pair; Cocks, \$12.00; Hens, \$8.00.

Cornish Indian Game.

This bird is of strong proportions, and so fine is his texture that his weight deceives the uninitiated. The beaks and shanks are yellow. The back and wings of the cock are a beautiful mixture of black and red. The tail and breast are black. The hen's back, wings, breast and body are a rich bay color, pencilled with black. Makes a fine market bird and is particularly good for crossing on Brahmas and Cochins for market. Hens, \$3.00; Cocks, \$5.00.

White Leghorns.
(Single Comb.)

White Leghorns resemble very closely the Brown variety, except in color. The large red combs, white earlobes, bright yellow legs and pure white plumage make them very attractive. They mature early and begin laying when about 4 months old. Setting of thirteen eggs, \$2.00. Hens, \$2.00; Pullets, \$1.75 each; Cocks, \$3.00; Cockrells, \$2.50 each.

Single Comb Brown Leghorn.

They are brown in color, with the exception that the cock is black on the breast, deep bay red on hackle; each feather should have a black stripe in center; back and saddle a deep bay red, tail black, have fine red combs and wattles, pure white earlobes and perfectly

yellow legs and skin. Their meat is very tender, sweet, juicy and fine grained. Chicks grow most rapidly, maturing at an early age. Setting of thirteen eggs, \$2.00; Hens, \$2.00 each; Pullets, \$1.75 each; Cocks, \$3.00 each; Cockerells, \$2.50 each.

Black Minorca.

The Black Minorca is considered a valuable breed. They are hardy, both as fowls and chicks, easily raised, mature early and pullets commence laying when very young. They are non-setters, small eaters, splendid foragers, and without doubt very profitable. Their plumage is pure black with a green or metallic lustre. Their legs are featherless, clean and of a dark slate color. Setting of thirteen eggs \$2.00; Hens \$3.50 each; Pullets, \$3.00 each; Cocks \$5.00 each; Cockerells, \$3.50 each.

Rhode Island Reds.

During the twenty years prior to 1900, some thrifty fanciers and egg-producers in the southern part of New England labored diligently to produce a fowl of good size, of marketable excellence, of large egg-producing ability, and of a reddish buff color. They succeeded in all these particulars, but they quarreled amongst themselves on some minor requirements, and especially as to whether their favorites should have single combs, rose combs, or pea-combs. It was not uncommon to find two or even three kinds of combs in the yard of the same breeder. Hens, \$3.00; Pullets, \$2.50; Cocks, \$4.00; Cockerells, \$3.50; Trio, \$9.00; Eggs, \$2.00 per setting of 13.

**Barred Plymouth Rocks.**

This most popular breed as an all round fowl needs no words of praise. They are good layers the year round, chicks grow very rapidly and make good broilers in a few weeks. Setting of thirteen eggs, \$2.00; Hens, \$3.50 each; Pullets \$3.00 each; Cocks \$5.00 each; Cockerells, \$4.00 each. These are fine breeding stock.

White Plymouth Rock Chickens and eggs, same price as barred.

Golden Seabright Bantams.

These are proud little birds. The Cocks and Hens are feathered alike. The plumage of the Golden Seabright has a yellow base and each feather is distinctly laced with black. Good layers, and one of the finest Bantams ever seen. Hens, \$3.00; Cocks, \$4.00.

We also have Bantam Fowls of different colors. Price, Hens, \$1.50; Cocks, \$2.00; Trio, \$5.00.

White Wyandottes.

This variety has shown its superiority as a practical and profitable fowl. Hardy, vigorous, a rapid grower, yellow skin, beak and legs, compact and plump body, and superior laying qualities, even in very cold weather, they combine as many or more good points than any other fowl. Setting of thirteen eggs, \$2.00; Hens, \$3.50 each; Pullets, \$3.00 each; Cocks, \$5.00 each; Cockerells, \$3.50 each.

Silver Laced Wyandottes same price as White.

**Light Brahmas.**

The Light Brahma is a very popular and profitable bird; their large bodies and rapid growth making them a good market fowl. They are also an excellent fall and winter layer, producing a large part of their eggs when other breeds are not laying and will do nearly as well in a cold coop as in a warm one, and are the largest among imported fowls. Setting of thirteen eggs, \$2.50; Hens, \$4.00 each; Pullets, \$3.50 each; Cocks, \$5.00 each; Cockerels, \$4.00 each.

**Buff Cochins.**

Buff, as the name indicates, in color; same shape and features as the large Buff Cochins, very good layers. Price Hens, \$2.50; Cocks, \$3.50; Trio, \$7.00.

Buff Cochins.

They are nearly as large as Brahmas, but different in shape; are more fluffy, deeper and broader astern than the Brahmas. Buffs are practically found to be hardy and good layers during the

winter months, and if not too old, and kept in good condition, will moult and lay early and consequently become broody early; and those who wish to have early chickens can use them for setting, as they are extremely reliable for setters. Setting of thirteen eggs, \$2.50; Hens, \$4.00 each; Pullets, \$3.50 each; Cocks, \$5.00 each; Cockerells, \$4.00 each. They are fine breeding stock.

Black Langshans.

They are very prolific, thrive well in either small enclosures or running at large. The chicks when first hatched are about half white, and quite frequently they show some white feathers in wings after they moult those chick feathers, black feathers will come in where the white ones were seen. In color the Langshan is a beautiful glossy black throughout, which makes it decidedly handsome. Setting of thirteen eggs, \$2.00; Hens, \$4.00 each; Pullets, \$3.00 each; Cocks, \$5.00 each; Cockerells, \$4.00 each; Trio, \$11.00.

White Crested Black Polish Chickens.

The Polish Chickens are especially fine and beautiful fowls, easily controlled and confined. Good layers, among the very best. Color, blue black, with pure white crest or top knot. Good foragers. Price, Hens, \$4.00; Cocks, \$6.00; Trio, \$12.00.

Capons.

A capon is a castrated male fowl. The act of caponizing consists in the removal of the testicles of a cockerel, in order that he may grow larger, and become more gentle, and fatten more readily than he otherwise would. The castrated cockerel, or capon, grows somewhat plumper and fatter, even if not much heavier, than the unaltered male, and retains much of the tenderness and juiciness of flesh and the higher meat value of the spring chicken. Surplus cockerels of the larger yellow-skinned breeds, as the Brahma, Cochin, Wyandotte, Plymouth Rock, Indian Game, Rhode Island Red, and the like, may be, and are now to some extent, turned into capons and sold in our leading markets at prices ranging from 16 cents to over 30 cents per pound. The Langshan, although white-skinned, also makes a good large capon. The dressed capon of the Brahma, Langshan and other large breeds often exceeds 10 pounds in weight.

In addition to its high meat value, the capon makes a splendid mother or nurse for young chicks. We have known them to protect as many as 60 young chicks at one time and they care for them even better than a hen would. Price, \$3.50 each.

Imperial Pekin Ducks.

The Imperial Pekin Duck is the most popular of all ducks, and is most extensively raised. They are large white ducks, in many instances they are a rich creamy white. They are very hardy, having seen ducklings at the age of eight weeks weigh over four pounds and in full feather. They are splendid layers, having been known to lay as high as 75 eggs in succession, but they lay best when in small flocks. Setting of eleven eggs, \$2.00; Drake, \$3.00; Hen, \$2.00; Trio, \$6.00.

Colored Muscovy Ducks.

An entirely distinct species from South America and inhabits the country along the equator from Guinea to Paraguay. It is of good size, black and white in color, the black predominating. The most peculiar characteristic is that the side of the head and the region around the eye are without feathers and corrugated and scarlet in color. Unlike any other variety, this duck builds her nest and never scatters her eggs. She will hatch and rear her young with diligent care. It requires the Muscovy five weeks to hatch, while other varieties hatch in four weeks. It is the duck that never quacks. Crossed with the Poodle Duck it forms the Muley Duck, which improves the size about one-third. Drake, \$3.00; Hen, \$2.00; Trio, \$6.50.

White Muscovy Ducks.

Have been bred from the Colored variety by careful selection of, the whitest specimens and now breed true to color. The young usually show some black at the top of the head and frequently on the back, underneath the wing, but this disappears after the first molt. Unlike others, it molts but once a year. The White is the same as the Colored variety except in color. Hens, \$3.00; Drakes, \$4.00.

Indian Runner Ducks.

The original home of these ducks was in India, but are now extensively grown in England, and were introduced in the United States about 20 years ago, and have won for themselves a high position on the eastern markets. Their wonderful laying qualities, together with the delicate flavor and richness of their eggs, make them much sought after for the breakfast table. These birds are very quick motioned, and it is possible for them to move very rapidly, being very strong in legs, well set back, with erect carriage. There is no suggestion of the awkward waddle of the com-

mon duck. Hence their name Indian Runner. Their peculiar markings and racy appearance make them very attractive, and to see them is to admire them. But what is best of all is their egg producing qualities, easily surpassing anything yet produced. The standard weight for a mature duck is 4 pounds, for a mature drake $4\frac{1}{2}$ pounds. If one desires it, by careful selection and breeding, they can be very easily made to weigh 6 to 7 lbs., but these are the leghorn of the duck family and should be kept very trim and neat and close to the standard weights. Indian Runners mature very rapidly, reaching market size in nine weeks. Runners require no water except for drinking purposes, they are great foragers, and find no small part of their food over their range in the form of grubs and worms, which they delight in hunting in the grass and weeds. While they do best when given free range, they can be quite successfully handled in limited quarters, a two-foot fence being sufficient to enclose them. Drakes, \$5.00 each; Hens, \$4.00 each; Trio, \$12.00.

Rouen Ducks.—Drakes, \$3.00; Hens, \$2.00; no eggs furnished.

Poodle or Called Ducks.—Hens, \$1.00 each; Drakes, \$1.25 each.

Toulouse Geese.

Are an old French breed, and have long been popular in France for their superior fattening qualities and hardness, making them very profitable. They are in demand on the American market and are largely bred on American farms. They are less esteemed for table purposes than some other breeds, owing to the coarse and flabby nature of the flesh.

They are late maturing and prolific, averaging about forty eggs in a season. \$9.00 per pair; Gander, \$5.00; Goose, \$4.00.

Brown Chinese Geese.

Rank with the Toulouse in size, and are considered more prolific. They are strong, vigorous and active birds. They are characterized by a large head, bearing a pronounced black knob, and a heavy gray dewlap under the throat. The neck is long, back broad and flat breast full and round, body large and upright. The thighs are short and plump, and the shanks medium long and dark orange colored. The plumage of the neck is rather light gray in color. Price \$12.00 per pair; Gander, \$7.00; Goose, \$6.00.

Common Geese.—\$4.00 per pair; Goose \$1.75; Gander, \$2.25.

White Fan Tail Pigeons.—\$2.50 per pair; Blue Fan Tail Pigeons, \$3.00 per pair; Carrier Pigeons, \$3.50 per pair; Homer Pigeons, \$3.00 per pair.

Ordinary Pigeons.—\$1.00 per pair.

Bronze Turkey.—As originated in the United States by crossing the wild turkey with the Black Turkey, known in England as the Norfolk. It is the largest, hardiest and the most admired of all varieties of turkeys for the market. \$10.00 per pair; Hens, \$4.00; Gobblers \$6.00.

White Holland Turkey.—This variety is pure white in plumage throughout, and has pinkish white shanks. \$10.00 per pair; Hens, \$4.00; Gobblers, \$6.00.

Ordinary Turkeys.—\$5.00 per pair; Hens, \$3.00; Gobblers, \$3.75 each.

Pigeon Nests.—25c. each.

Earthen Pigeon Napples.—10 inch, glazed, 20c. each; 10 inch, unglazed, 15c. each.

Aluminum Leg Bands.—25c. per dozen; if by mail, 30c. per dozen; \$1.50 per 100.

Aluminum Pigeon Leg Bands.—25c per dozen, postpaid; \$1.50 per 100, postpaid.

Copper Leg Bands.—20c. per dozen; if by mail, 25c. per dozen; \$1.25 per 100.

Caponizing Sets, no case.—\$2.50 each; if by mail, \$2.60.

Caponizing sets, with case.—\$2.75 each; if by mail, \$2.85.

Lead Probes.—25c. each; if by mail, 30c.

Pilling Poultry Killer—50c., by mail 60c.

French Poultry Killing Knives—50c.

Eyrie Egg Box.—One setting, 25c. each; 2 settings, 30c. each.

Anderson Egg Boxes.—One setting, 20c. each; 2 settings, 25c. each.

Steckler's Guaranteed Poultry Supplies.

Years of experience have taught us the good and bad qualities of Poultry Remedies now on the market, and in order to thoroughly protect our patrons, as well as ourselves, from an inferior grade of goods and to fully know just what we are selling, we have arranged with one of the largest chemical houses in the country to analyze and pick out the best qualities of other well known makes regardless of expense to put up for us under our own name and label a full line of Poultry supplies that we can bank on as standing at the head of all. This enables us to place on the market goods of absolute uniformity and of highest quality, and our name on the labels will be a guarantee of purity and merit at all times.

ble antidote for many diseases of live stock. Will cure Roup, Cholera, Indigestion, Bowel Complaints, Canker, Frosted Combs, Chicken Pox, Swelled Head, Sores, Cuts, Wounds, Sore Eyes, etc., etc. We strongly recommend its use occasionally, once or twice a week, in drinking water, which will prevent the possibility of disease invading the chicken house. Also cures Sore Mouth, Sore Breast, Back or Shoulders, Cracked Heels, Thrush, Wounds, Cuts, Sores, Saddle Galls. Per bottle, 50 cents; by express only. Full directions on each bottle.

Steckler's Roup Cure Powder.

A guaranteed cure. Put one measure of the cure into one gallon of soft drinking water and keep all the other water out of reach, and the fowl will take its own medicine. In a well developed case of Roup keep all the afflicted fowls in a separate coop. When a fowl cannot see to drink, bathe its head with a solution of the Cure. As a preventive, add about one-half the measure full to one gallon of water. This will cure a cold in three or four days. But a full developed case of Roup will take from two to three weeks. Small box, 50 cents; by mail, 3c. extra; large, \$1.00 per box, by mail, 5c. extra.

Steckler's Microzone.

Disease cure and preventive. Keeps poultry in a healthy condition. A valuable

Steckler's Magic Egg Producer.

Acts like magic in stimulating egg production. Containing all necessary elements for egg-making, that hens need

in accurate and scientific proportions. This preparation is made to a famous recipe which has been tested and approved by the largest poultry raisers in the country and declared superior to all other egg-producers. We can therefore absolutely guarantee it to be the best on the market. Full directions on each package. Price, 2½ pound packet, 25c.; by mail, 25c. extra.

Steckler's Insect Powder.

Kills insects on poultry, live stock and plants. Exterminates Moths, Ants, Chiggers, Roaches, Fleas, Lice, etc. Unexcelled for the household, garden, poultry house and stable. Quickly eradicates insects from domestic animals. Stands at the head of insect powders, being absolutely effective for all purposes. 5oz. sifter can, 10c., by mail 3c. extra; 16 oz. sifter can, 25c., by mail, 16c. extra; 3 lb. can, 50c., by express or freight only.

Steckler's Death to Chicken Lice and Mites.

This is our preparation, and we guarantee it to be as effective as any on the market, and much cheaper. For roost and hen houses, for vermin, lice, mites on chickens, horses, cattle, swine or plants, fleas on dogs, etc., it cannot be beat. 20 oz. can, 25c., by mail 12c. extra; 4 lb. packages, 50c., by express or freight only.

Steckler's Chicken Cholera Cure.

The best on the market, 50c. per package; by mail 5c. extra.

Steckler's Crushed Oyster Poultry Food.

Is of superior quality, being manufactured by a new roller process from oyster shells (without first being baked or burned, which destroy the essential properties), consequently they contain all their natural properties and the full percentage of carbonate of lime. To get the best results in Poultry raising the use of something of this kind is positively necessary. Every poultry house or yard should have a pan or trough full of crushed shells, so that the fowls can have free access at all times. 5c. per pound; 6 pounds for 25c.; 100 pounds for \$1.25.

Pratt's Poultry Food.—This egg producer is too well known to make any comment on the same; it makes large fowls, quickens the growth of young chicks, prevents and cures all poultry diseases. The manufacturer claims it to be a sure cure for Chicken Cholera, Roup, Gapes and all diseases that poultry are subject to. Price per package, 26 oz., 25c., by mail 15c. extra; 12 lb. bags, \$1.25, by freight or express only. Pratt's Egg Producer, 60c. for 5 pounds by freight or express only. Pratt's Animal Regulator, 25c. size, by mail, 15c. extra; 50c. size, by mail, 20c. extra. Pratt's Stock Food, 7 pounds, 50c. In 12 pound bags, 75c.

Pratt's Roup Cure is a fine powder, and you simply mix it with the drinking water, the fowls drink and are cured. A 25c. box makes 15 gallons of roup medicine, and it will mean life to your flocks. You cannot afford to be without it. 25c. per box, by mail 3c. extra.

Magic Food for Poultry.—An excellent food and egg producer. A safe Vegetable Tonic and remedial agent, containing all the essential elements for producing the best results in Eggs, Plumage, Growth and Development and the cure and prevention of all diseases of the flock. Will make hens lay in summer and winter. Will make larger fowls and quickens the growth of young chickens. Price, 25c. per package, by mail 16c. extra.

International Stock and Poultry Food. Price, 25c. per package; by mail, 15c. extra for postage.

Magic Food for Horses, Cattle, Sheep and Hogs.—A Vegetable Tonic and Appetizer for all sorts of stock, improving their general health and keeping them

in good condition. It is nature's own remedy for the cure and prevention of all diseases which horses, cattle, sheep and hogs are subject to. It is not directly a food, but should be given with the regular rations of grain daily. Price per package, 25c., by mail 16c. extra.

Perfection Stock Food.—For Horses, Cattle, Sheep, Hogs, Etc.—This improved medicated food is a careful combination of medical ingredients, which insures good digestion, purifies the blood, keeps them strong and healthy, and prevents diseases. It is prepared from roots, seeds, etc., making it a medicated food. Containing nothing injurious. Keep dry. Price, 50c.

Chamberlain's Feeds.

Chick Feed, \$2.50 per 100 pounds; 5c. per pound, 6 pounds for 25c.

Hen Food, \$2.50 per 100 pounds, 5c. per pound, 6 pounds for 25c.

Mash Egg Feeds, \$2.50 per 100 pounds; 5c. per pound, 6 pounds for 25c.

Evergreen Clover Meal, \$2.50 per 100 pounds; 5c. per pound; 6 pounds for 25c.

Pigeon Feed, \$2.50 per 100 pounds; 5c. per pound; 6 pounds for 25c.

Poultry Food.—Wheat, 5c. per pound, 6 pounds for 25c.; Millet, 5c. per pound, 6 pounds for 25c.; Rye, 5c. per pound, 6 pounds for 25c.; Hemp Seed, 10c. per pound, 2 pounds for 15c.; Russian Sunflower, 15c. per pound, in 5 pound lots, 10c. per pound; Ground Oyster Shell, 5c. per pound, 6 pounds for 25c.; Ground Poultry Bone (coarse or fine), 5c. per pound, 6 pounds for 25c., \$2.50 per 100 pounds; Mann's Crystal Grit, Blue Stone color, coarse and medium; Pearl Grit (white), coarse, medium and fine, 5c. per pound, 6 pounds for 25c., \$2.00 per 100 pounds; fine Ground Dried Blood, 10c. per pound, 3 pounds for 25c.; \$5.00 per 100 pounds; Bone and Meat Meal, 10c. per pound, 3 pounds for 25c.; \$5.00 per 100 pounds; Beef Scraps, 10c. per pound, 3 pounds for 25c.; \$5.00 per 100 lbs.

Ground Charcoal.—For Chicken Feed, 5c. per lb.; 6 lb. 25c.; \$4.00 per 100 lbs.

Blum's Insect Destroyer should be sprinkled around freely wherever the insects congregate. If necessary, use an insect powder gun to force it into inaccessible corners and crevices. It should only be used in dry places, as moisture decreases its efficiency. It drives away ants, moths, weevils, bed-bugs and all other insects around the house. Price, 10c., by mail 2c. extra.

Lambert's Death to Lice.—A disinfectant insect powder and a cheap, effective remedy for all kinds of poultry vermin such as lice on horses, cattle, swine or plants, fleas on dogs, ticks on sheep, moths, bed, water or squash bugs, roaches, etc. Price, 3 pound package 50c., by express or freight only; 1 pound package, 25c., by mail 16c. extra; ¼ pound package, 15c., by mail 5c. extra.

O. K. Fly Relief.—Two quarts, 65c.; 1 gallon, \$1.10; five gallons, \$4.50; by express or freight only.

China Nest Eggs.

These eggs are the exact size and shape as the natural ones, and are well adapted for breaking the habits of setting hens. With ordinary care they will last a life time. 5c. each; 6 for 25c.

Egg Testers, 60c. each, postpaid.

Knox Lice Expelling Medical Egg.—One of the best inventions in the line of Nest Eggs. They have the appearance of buff colored chicken eggs, are clean

and a positive vermin exterminator. These eggs are made of burnt clay, hollow inside, and filled with a dry, strong insecticide, harmless to chickens, but sure death to all insects which fowls are subject to. No dusting insect powders, etc., in the nest, one of the eggs, if placed under chickens, will keep them and their nests free from vermin. 10 cents each; \$1.00 per dozen; by mail, \$1.35 per dozen.

Reynold's Medicated Eggs, 5c each; 50c per dozen; by mail, 60c per dozen.

Zucker's Medical Insecto.—The most perfect disinfectant and most wonderful destroyer of moths, lice, mites and cockroaches ever discovered. Price, 15c. each.

box, postpaid.

**Thompson's No. 7 Banner Hand Root
Cutter.**—This Root Cutter has been out
nine years and thousands of them are
in use among Poultrymen; weighs 50
pounds. Price, \$7.00 each.

**Dry Bone, Shell, Crystal and Corn
Mills, No. 750.**—Height, 17¼ inches;
length, 12 inches; width 8½ inches;
diameter of throat, 3½ inches; wheel, 19
inches in diameter; weight, 60 pounds;
capacity, 1¼ bushels per hour. This is
a well-known fact that ground bone,
shells and crystals and cracked corn, etc.,
are excellent for poultry. These mills
are especially adapted to the above, but
in dry state only. For instance, shells,
crystal, corn, root, bark, grain, chicken
feed salt, etc. It is considered that
ground bone is one of the best fertil-
izers for that purpose alone. They are
good general mills for farmers, poultry-
men, etc. For compactness, strength
and durability, we regard them as excel-
lent. Price, \$10.50.

Red Chief Corn Sheller.

Cast iron, janned; fastened to bin,
box, barrel, bucket or tub by two clamps;
height over all 10 inches; width over all
8 inches. Adjustable hopper, width, 3½
inches; depth, 4 inches. Pressure regu-
lated by a No. 10 gauge wire coil spring;
diameter of shell wheel, 7¼ inches,
studded with ½ inch oval teeth, which
will not crack the grains. Length of
steel axle bearing 4½ inches; length of
cranks, 9½ inches. Will shell clean all
kinds of field corn and throw out the
cobs. Weight each about 11 lbs., \$2.50.

Plant Pecan Trees, it is like putting money in the Bank.

KEYSTONE INCUBATOR.

A Good Incubator Selling at a Popular Price.

This machine is double cased, outside galvanized iron, inside case one inch soft wood, the space between the two cases insulated. The top with cotton-batting, the sides dead air space and building paper.

No incubator, no matter what the selling price may be, has a better system of heat distribution, a better or more economical heater, a more sensitive regulator or a case that will be less influenced by the extremes of dry and wet locations to which incubators are subject.

This incubator is not to be compared with the cheap hot water machines now on the market, built with a single case and fitted with cheap galvanized iron or copper tanks with their short life, leaks and liability to be frozen and destroyed. In short this incubator contains every feature that can be found in the highest priced machines upon the market to-day, namely, the best system of heat distribution and application, the best system of ventilation, the best method of regulating the heat and the best way to apply moisture. Every part is designed with the object in view of hatching the highest possible percentage of eggs with minimum care and attention. The incubator is provided with the safest oil lamp and all those details which add to the durability and long life of a machine. This machine is a money maker because the original investment is low, the machine will last indefinitely and will not have to be renewed every few years.

It is guaranteed absolutely in every particular and is furnished complete

with egg tester, egg tray, tested Tycoos thermometer of the highest grade, galvanized iron sand tray, automatic heat regulator, extra wicks, safety lamp, asbestos jacket and heater. Full and complete directions for operating, everything complete, ready to run except eggs and oil, price sixty egg capacity, \$11.00. Weight crated, 60 pounds; weight net, 48 pounds.

Keystone Brooder — This Brooder which may be used indoors as well, is 24 inches wide, 29 inches long, 18 inches high, constructed of one inch soft wood lumber throughout and painted, with a galvanized iron roof, four large ventilators covered with a wire gauze and galvanized shutters. Hover removable, containing a galvanized radiator to furnish top radiant heat to the backs of the chicks, which long experience both upon Experimental Stations and large extensive poultry farms throughout the United States and Canada, have shown to be the only practical, up-to-date method of heat application.

This brooder is divided into two parts, hover and run, to which the chicks have access for exercise and for feeding. The lamp is placed in a galvanized iron case upon the outside of the brooder. Access to the lamp is readily obtainable through a hinged door in the case. Lamp smoke, by no possibility, can enter the brooder, which is separated from and entirely distinct from the forced ventilation which enters the brooder and hover at all times. The smoke is exhausted in the upper part of the lamp case from which after passing through the radiator, finds its way into the outside air.

While this brooder is low in price it is practical and successful, and makes a good running mate for the Keystone Incubator. This brooder is absolutely water proof. The floor is off the ground a sufficient distance to make it dry.

This brooder is furnished with the best grade of safety lamp, galvanized iron case and radiator inside of the brooder, hover, extra wicks, thermometer for obtaining the correct temperature of the hover, everything complete ready to run, price \$9.00, weight 59 pounds. Incubator, 60-egg capacity, and this brooder in combination, \$17.00.

Price List for Incubators.

THERMOMETERS.

Our Thermometers are made from seasoned lens tubes. Their accuracy is guaranteed. Minimum Thermometers consist of a glass tube arranged horizontally and filled with alcohol, a black index moving freely in the fluid. The instrument is set by raising the bulb and allowing the index to float to the end of the column of alcohol; as the temperature decreases the column recedes, carrying with it the index to the lowest point, where it remains, while on an increase of temperature the alcohol alone re-ascends. The end of the index farthest from the bulb shows the lowest temperature reached. These Thermometers are of the greatest value to planters, farmers and any one wishing to know "how cold it got" during the night. It will be impossible with the ordinary thermometers to exercise sufficient watchfulness to obtain accurate results. Usually the coldest time during the 24 hours is between 5 and 8 o'clock in the morning. To get an accurate result of the degree of cold these thermometers should be exposed to the north. They should not be exposed to the sun and rain.

Weather, 8-inch, tin frame, 75c.; 16-inch, \$1.00; 12-inch, \$1.25; 8-inch, wood frame, 30c.; 10½-inch, minimum horizontal, \$2.

Parrots.

Trained Parrots (good talkers), \$20, \$25, \$30 and above, according to talking. Young Handraised Mexican Double Yellow Head Parrots, \$12 and \$15 each. Young Handraised Mexican Red Head Parrots, \$6 and \$7 each.

Trapped Parrots are cheaper than handraised birds, but as a rule cannot be recommended. Besides being wild they are lacking in talking ability. In fact, old trapped Parrots will never learn to talk.

The only variety of trapped Parrots, who will learn to talk fairly well, if properly trained, are young trapped Mexican Double Yellowheads, not over one year old. We can usually furnish these from December till April. Price \$6.00 each.

Steckler's Worm Medicine for Puppies.—Price, 80c. per bottle postpaid.

SWINE.**The Poland China.**

This is a black hog with white markings; face, feet and tip of tail, and a few small spots not objectionable. They grow large and are easily fattened. Sows make good mothers. Price, per pair, 8 to 10 weeks old pigs, \$27.00; Boar, \$18.00; Sow, \$14.00.

Berkshire Hogs.

Orders for early spring pigs of the most approved breeding now being booked. Prices reasonable. All stock eligible to registry. Price, per pair, 8 to 10 weeks old, \$27.00; Sow, \$14.00; Boar, \$18.00.

Ohio Chester White Hogs.—The hogs dressed, when 8 to 9 months old, will net 175 to 250 pounds. When fully matured will weigh from 600 to 800 pounds. Very popular breeds. The sows are prolific. Thorough breeds of the above, 8 to 10 weeks old, \$25.00 per pair; Boar, \$18.00; Sow, \$14.00. Graded Chester White, 8 to 10 weeks old, \$14.00 a pair. Cross Chester White and Poland China, \$20.00 a pair.

Duroc Jersey Red Hogs.—The Duroc Jersey is a red-haired hog, otherwise they resemble the Poland China. Well matured shoats weigh 250 to 340 pounds; when 9 to 12 months old, four to seven hundred pounds at maturity. They are quiet hogs, excellent feeders, stand forcing well and never sun scalded. Their bones are large and sows are very prolific. 8 to 10 weeks old \$27.00 per pair; Boar, \$18.00; Sow, \$14.00.

"ANTIKOL."

Antikol is especially designed to prevent and cure Hog Cholera. It cannot be of benefit except in cases where a disease is due to germs introduced into the intestinal tract. It is fatal to the hog cholera germ and yet absolutely harmless to the hog when used in accordance with directions.

"IDEAL TONIC."

"Ideal Tonic" for hogs is a strictly high grade tonic, which can be used with equally good results on all kinds of stock, horses, poultry, etc.

Price List—"Antikol" \$1.00 and \$6.00 packages. The \$6.00 size contains 7½ times more than the \$1.00 size. "Antikol" postpaid, in \$1.00 size, \$1.18.

Price List—"Ideal Tonic" 50c. and \$1.50 size. \$1.50 size contains 4 times more than the 50-cent size. "Ideal Tonic" postpaid, in 50c. size, 65c.

LARGE CATTLE LABELS.

Size one-half inch wide and one and one-half inches long. May be stamped with owner's name and address if neither requires more than 15 or 16 letters. Fewer letters are plainer. On the jointed side the numbers are stamped from 1 upward if the order fails to specify otherwise.

These labels are used with great satisfaction to cheaply insure against loss any cattle liable to stray; to number herds of blooded stock and thus form a convenient basis for keeping a reliable herd record; to number herds of milch cows; on herds whose owner has to entrust the care to others; on cattle shipped from buyer to seller; veterinary surgeons label cattle as they pass inspection.

Price, 75 cents per dozen; \$4.00 per hundred.

LIGHT CATTLE LABELS.

Weigh one-fourth ounce; somewhat smaller than the "Large Cattle Labels."

This size is suitable for calves and will remain without trouble from the growth of the ear. It is just as strong and serviceable for all cattle as the largest size, except it has slightly smaller figures and less room for lettering. The hole required in the ear is smaller and cuts easier.

Not more than two lines of 13 and 14 letters each can be stamped. Price, 60 cents per dozen; \$3.00 per hundred.

SHEEP, HOG AND GOAT SIZE.

One-fourth inch wide and one inch long. May have ten or twelve letters stamped. Fewer letters are larger and plainer. On the jointed side will be stamped consecutive numbers 1 and upward unless ordered otherwise. In the place of the consecutive numbers a year date number may be stamped, for instance, '09 for animals born that year. Or the date number may take the place of two letters on the plain side. If two numbers are required on each Label, say so plainly.

No other mark or ear tag will answer the purpose as well as these simple one-piece link shaped Labels. We have sent them all over the world.

Price, 40 cents per dozen; \$2.00 per hundred.

PUNCHES.

Made to cut an oval hole the right distance from the edge of the ear, pincers for accurately closing the Label on each punch.

Sheep and Hog Label size.....\$1 00
Calf or medium Label size..... 1.25
Cattle Label size 1 50
Extra cutting tubes 15

BULL NOSE PUNCH.

Is so made that the whole operation of securing the ring in place is done while the bull's nose is held by the Punch. Any kind of hinged ring may be used.

Price \$1 25

Extra for packing: Large size, 25c.; small size, 15c.		

Gold Fish Nets.—4 inches in diameter, 10 in. handle, 30c. each.

Sea Shells for Aquariums.—50c. per dozen.

Salvinia Braziliensis.—This pretty little floating aquatic is suitable for all Aquaria. The leaves are a soft green,

covered with a delicate hairy surface. 15 cts. per bunch; \$1.50 per dozen.

Fish Food.—Gold Fish in aquariums should be regularly fed every day. They will soon become tame, eat the food from the hand, and look for it at the usual hour. This food is put up in a neat package containing enough of the food to last a long time. Price, per package, 10c.; by mail, 5c. extra. Gold Fish Grass or Sea Weeds, 40c. per dozen, very essential for an aquarium. By mail, 5c. extra.

Ferrets.—These little animals are the deadliest enemies of Rats, Minks and Mice. Rabbits are also afraid of them. As soon as a Ferret enters the home, farm or ship the Rats and Mice leave and do not return as long as the Ferret is present. Try a pair and be convinced.

Price of Ferrets:

During August and September, \$10.00 per pair.

During November and December, \$12.00 per pair.

During January, February and March, \$15.00 per pair.

Corn Poppers.—For popping Pop Corn, making the work quick, easy and pleasant. Extensively used and gives general satisfaction. Price, No. 1, 30c.; No. 2, 20c.; by mail add 20c. extra for postage for either size.

Steckler's Okra Gloves.—This is a new enterprise in the gardening world, made of crude mule's skin; strong and durable; the article which was long wanted for gardeners. 60c. per pair postpaid.

FLORISTS' SUPPLIES.

Christmas Trees.—We beg to notify our many patrons that we carry the largest stock of Christmas trees of any house in the South. Prices ranging from 50c. to \$20.00. The trees averaging from 4 to 20 feet, of the finest Spruce Pine. Also Holders for same, as well as Candles and Candle Holders, etc. Send in your orders early next season. Trees on hand from December 15th.

Christmas Tree Holders.—Prices, No. 1, \$1.00; No. 2, 75c. Candles, 15c. per box; Candle Holders, 15c. per dozen.

Terra Cotta Jardiniers with Fern Pans for Decorating Tables and Parlors; Handsomely Decorated.—9 x 4 inches, 80c.; 7½ x 2½ inches, 60c.; 7 x 3 inches, 50c.; 5½ x 2¾ inches, 40c.

Fern Pans.—The best pot to grow Ferns or Lycopodiums in. They are made of Terra Cotta, shallow and porous, strong, and, above all, very clean.

Copper Tree Labels.—No. 1, 50c. per dozen, \$1.75 per 100; No. 2, 75c. per doz., \$2.75 per 100.

To grow ferns in the house, no better pot could be found, if used in connection with the saucer to prevent the water from dripping through. Instead of potting soil, Leaf Mould should be used. Ferns grow best in it, it is light and retains moisture much longer than any other soil. We have these Pans and Saucers in the following sizes:

Fern Pans.		Saucers to Suit.	
4	by 1½ inch,	10c. each	5c. each

Cemetery Shells, at \$8.00 per barrel or 40c. per dozen.

Weather-Thermometers.

See Page 176.

Wheelbarrow—Eastern No. 1—Nineteen inches wide, 21 inches deep, 10 inches high, \$4.00. These garden wheelbarrows are indispensable on a farm, plantation or garden. No such establishment should be without a wheelbarrow.

Sieves.—Medium. 17 inches in diameter, all sizes from ½ inch to ¾ inch mesh. Brass \$2.00 each; iron, 80c. for securing fine, mellow earth, so desirable for planting all kinds of small seeds.

FLORAL DEPARTMENT.

The Shipping of Fresh Cut Flowers, Bouquets and Floral Designs has always had our special attention. This department is in charge of a Floral Artist who prides himself with the fact that he

Never Disappoints.

This is a source of great satisfaction to people in the country who want fresh flowers on short notice for Funerals, Weddings, etc. We always ship something appropriate in case the desired flower is not in season.

Telephone or telegraph us, allowing a few hours before train time, and you can count on prompt service.

It is preferable to write us explicitly, if possible, naming prices and colors of flowers desired, also the time for which flowers are needed in cases of weddings and entertainments.

No Extra Charge for Packing.

Cash or city references should accompany each order. Telegraph or Telephone orders are shipped C. O. D., except where parties are known to us.

CUT FLOWERS.

These are all hot house grown, Roses on long stems and large buds, Carnations fresh and sweet, Lilies of the Valley every day of the year from our own forcing houses.

Prices of Cut Flowers.

Roses, white and pink, per dozen..	2.50
Carnations, white, pale and deep pink, per doz.	1.50
Lilies of the Valley, white only, per dozen	1.25

From Christmas to Mardi Gras Only—

Hyacinths, white, per dozen,	\$1.00.
Hyacinths, large, in pink, white, red and lilac, per dozen,	\$2.00.
Narcissus, white, per dozen,	75c.
Daffodils, yellow, per dozen,	\$1.50.
Sweet Peas, all colors, per dozen,	25c.
Gladiolus, all colors, per dozen,	\$1.50.

During Mid-Summer—

Asters, white, pink and lavender, per dozen,	\$1.00 to \$2.00.
Paeonies per dozen,	\$2.50 to \$4.00.
Easter Lilies, in season, per dozen,	\$4.00 to \$5.00.

Ferns free with each shipment.

During Holidays, prices are higher from 25 to 50 per cent.

Funeral Designs.

Crosses, without foot, to lay on coffin,	\$2.50 to \$10.00.
Crosses, on stand,	\$3.00 to \$25.00.
Wreaths, without foot, to lay on coffin,	\$2.50 to \$10.00.
Wreaths, on stand or easel,	\$3.00 to \$25.00.
Pillows, Lyres, Harps, Stars,	\$3.00 to \$25.00.
Gates Ajar, with Doors and gold painted Ribbon,	\$10.00 to \$30.00.
Masonic, Odd Fellows, Elks and other fraternity emblems,	\$10.00 to \$30.00.
Funeral Bouquets, flat for coffin,	\$1.50 to \$10.00.
Casket Covers or Floral Palls,	\$25.00 to \$100.00.

These require at least six hours and longer for elaborate pieces, and should be ordered as early as possible.

Wedding Bouquets, Etc.

The Bride's Bouquet is nearly always white, but of late we have furnished American Beauties and other colored flowers for the Bride to carry.

The Maid of Honor carries the same color as the bride and the bouquets for the Bridesmaids correspond in color with their toilets, but pink is predominant.

Bridal Bouquets.

White Carnations, with white ribbon or tulle,	\$3.00 to \$6.00.
White Carnations and Bride Roses, with ribbon or tulle,	\$4.00 to \$8.00.
White Carnations and Lilies of the Valley with ribbon or tulle,	\$4.00 to \$10.00.

Carnation Basket.

Bride Roses only, with tulle or ribbon, \$3.00 to \$8.00.

Bride Roses with Lilies of the Valley, \$5.00 to \$10.00.

Shower Bouquets of Carnations, \$5.00 to \$8.00.

Shower Bouquets of Carnations and Bride Roses, \$5.00 to \$10.00.

Shower Bouquets of Lilies of the Valley and Roses, \$5.00 to \$20.00.

Shower Bouquets of Orchids and Lilies of the Valley, \$15.00 to \$50.00.

Boutonnieres to match, 25c. to 50c.

Maids of Honor and Bridesmaids Bouquets, in white or pink, \$3.00 to \$6.00.

Baskets for Flower Girls, \$2.00 to \$4.00 each.

Mardi-Gras, Fairs and Other Festivities.

We are prepared to furnish up to date Floral Decorations, Banquets, Baskets,

etc., for Queen and attendants. Correspondence solicited.

For Anniversaries, Birthdays, Etc.

Horseshoes of Fresh Flowers, from \$3.00 to \$20.00.

Horn of Plenty, from \$5.00 up.

Easter Lilies.

We grow quantities of these and ship to all parts of the South. Price per dozen, \$4.00 to \$5.00.

We suggest timely correspondence to arrange for coming events and guarantee satisfaction.

We exercise the greatest care in packing and shipping only fresh stock, but all shipments travel at the risk of consignees.

Madeira Vine Tubers, 10c. each;	
per 100	7 50
If by mail, add 9 cents per pound for postage.	

Job's Tears.—(Coix Lachryma.)—This is a curious ornamental grass, with broad leaves, similar to corn, of a light slate color. It is valuable for Winter bouquets, in connection with everlasting flowers. The seeds, when dry, are strung on heavy waxed shoemakers'

thread, making fine necklaces, chains and bracelets, and is also good for children when teething. It is a hardy annual and grows three feet high. Price, ounce, 15c.; $\frac{1}{4}$ lb. 40c.; 1 lb. \$1.00.

Texas Seeded Ribbon Cane, or Sorghum.—A very strong and tall-growing variety, noted for the immense quantities of finest syrup which it produces. It has yielded from 300 to 400 gallons of molasses per acre. The strong, leafy stalks make, also, excellent forage. Plant in rows $3\frac{1}{2}$ feet apart, eight to ten pounds to the acre. 1 lb., postpaid, 25c.; by express, 15c. per pound; 20 lbs. for \$2.00; 50 lbs. for \$5.00; 100 lbs. for \$9.00.

Castor-Bean (Ricinus Communis).—The plant prefers a rich, well drained, sandy or clay loam and will not do so well on either a stiff clay or a light sand. The seeds are planted either in rows four to five feet apart each way, or else in rows about four feet apart and only eighteen inches apart in the row. When the plants are about six to eight inches high they are thinned to a stand of one plant per hill. The plants are cultivated level to keep down the weeds, as in corn, until they are about two feet high, from which time they should be able to take care for themselves. From four to six seeds are planted in a hill, to allow for all accidents. About one and one half quarts of seed are required for an acre, if hills are put four to five feet apart. Price 25c. per pound. By mail, 35c. per pound.

Sterlingworth Plant Food Tablets.—Takes the place of liquid manure. It starts the plants at once into healthy and vigorous growth and makes them grow and bloom luxuriantly. Trial size box, sufficient for 10 house plants for 3 months, 20 cents, postpaid. Large size box, sufficient for 35 plants for 3 months, 40 cents, postpaid.

Sterlingworth Weed Killer.—Full directions on each package. Prices: 1 lb. package makes 15 gallons, covers 45 to 60 sq. yards, 75 cents; 3 lb. package makes 45 gallons, covers 130 to 180 sq. yds., \$1.50; 5 lb. package makes 100 gallons, covers 300 to 400 sq. yds., \$2.50.

Green House or Lawn Aprons.

Used for gardeners, house establishments, conservatories and amateurs, who do a great deal of house watering. It is simple, durable and saves clothes; prevents sickness by getting wet by watering. Price, \$2.00.

Mastica.—The best substance known for glazing greenhouses. Remains in a soft, pliable and elastic condition for years. Put up in one gallon cans, \$1.50.

"PEERLESS" GLAZING POINT.
(Improved Van Keyper.)

The Peerless Glazing Point.

The most durable, reliable and cheapest in the market. Made of steel wire,

with two points, they never bend in the middle when driven or work out by wear.

Sold in boxes of 1,000, which will glaze 500 lights of glass. Price, per 1000, \$1.00.

Garden Lines.—Made of cotton, at \$1.00 per roll.

Mastica Glazing Machine.—For applying above composition. Price, \$1.50. Full directions accompany each machine.

Jerusalem or Ground Artichoke.—This tuber is well known and requires no further description. It is used for the table, also for stock feed. It does better in a rich loam, and should be planted and cultivated like potatoes. The required quantity of Ground Artichokes to plant an acre is 10 to 12 bushels. The returns from one acre are from 200 to 500 bushels. Price per bushel, \$2.50; per gallon, 35c.; \$6.00 per barrel.

Strawberry Shooks or Dirt Bands.

Eggplants, Musk Melons and Early Cucumbers pay well if they come early into the market. In order to have them early it is a good plan to start them in a cold frame in what are called "Dirt Bands." This is a box 4 inches square and 4 inches deep, without bottoms. These are placed in a frame and filled up with good rich soil, and five or six

seeds in each box; when the plants come up, thin them out to one or two in each box. Before using dirt bands, wet them thoroughly before bending or they will be apt to break at the grooves. Price, 50c. per 100, \$2.50 per 1,000.

Tacks for Dirt Band and Boxes, $\frac{1}{4}$ pound, 15c.; pound, 40c.

Complete List of Commercial Fertilizers.

Ground Bone or Meal, 5c. per lb., 6 lbs. for 25c., \$2.50 per 100 lbs.

Standard Soluble Guano, 5c. per lb., 6 lbs. for 25c., \$2.00 per 100 lbs.

Stern's R. B. Sup. Phos., 5c. per lb., 6 lbs. for 25c., \$2.00 per 100 lbs.

Champion Farmers Choice, 5c. per lb., 6 lbs. 25c., \$2.00 per 100 lbs.

Blood, Bone and Meat, 5c. per lb., 6 lbs. 25c., \$2.00 per 100 lbs.

Mississippi Home Guano, 5c. per lb., 6 lbs. 25c., \$2.00 per 100 lbs.

Rice Fertilizer, 5c. per lb., 6 lbs., 25c., \$2.00 per 100 lbs.

Acid Phosphate, 5c. per lb., 6 lbs. 25c., \$2.00 per 100 lbs.

Kainit, 5c. per lb., 6 lbs. 25c., \$2.00 per 100 lbs.

Land Plaster, 5c. per lb., 6 lbs. 25c., \$1.75 per 100 lbs.

Vegetable Super-Phosphate, 5c. per lb., 6 lbs. 25c., \$2.50 per 100 lbs.

Dissolved Bone, 10c. per lb., 3 lbs. 25c., \$2.75 per 100 lbs.

Orange and Fruit Tree Fertilizer, 10c. per lb., 3 lbs. for 25c., \$3.00 per 100 lbs.

McCall's Formula, 10c. per lb., 3 lbs. 25c., \$2.50 per 100 lbs.

Nitrate of Soda, 10c. per lb., 3 lbs. for 25c., \$4.00 per 100 lbs.

Muriate of Potash, 10c. per lb., 3 lbs. 25c., \$5.00 per 100 lbs.

Sulphate of Potash, 10c. per lb., 3 lbs. 25c., \$6.00 per 100 lbs.

Sulphate of Ammonia, 10c. per lb., 3 lbs. 25c., \$5.50 per 100 lbs.

Sulphuric Acid, 10c. per lb., 3 lbs. 25c., \$3.00 per 100 lbs.

Muriatic Acid, 10c. per lb., 3 lbs. 25c., \$2.00 per 100 lbs.

Ground Oyster Shells, 5c. per lb., 6 lbs. 25c., \$1.50 per 100 lbs.

Bat Guano, 5c. per lb., 6 lbs., 25c., \$3.00 per 100 lbs.

High Grade Sugar Phosphate, 10c. per lb., 3 lbs. 25c., \$2.50 per 100 lbs.

Steckler's Special Hen Feed. Composed of the best grain to give bone, flesh and egg producing qualities to Chickens. Put up in 100 lb. bags, at \$2.25 per hundred. For grown Chickens only. None genuine unless in original sacks with our name and address on same.

Strawberry Plants, Michel's Early and Ocean City are the Best.

Foreign Postage on Seeds and Plants.

We very respectfully solicit orders for Seed and small plants from private individuals, market gardeners, or merchants in foreign countries, especially those countries with which the United States has a Merchandise Post Agreement, and below enumerate these particular countries and the weight per package which may in every case be posted at 12 cents per pound:

Australia	4 lbs. 6 oz.
(New South Wales, Victoria, Queensland, South Australia, West Asutralia and Tasmania.)	
Bahamas	11 lbs.
Barbados.....	11 lbs.
Bermuda	11 lbs.
Bolivia	11 lbs.
British Guiana	11 lbs.
Chile	11 lbs.
Colombia	11 lbs.
Costa Rica	11 lbs.
Danish West Indies	11 lbs.
(St. Croix, St. John, St. Thomas.)	
Ecuador	11 lbs.
Guatemala	11 lbs.
Honduras (British)	11 lbs.
Hong Kong	11 lbs.
(Amoy, Canton, Cheefoo, Foochow, Hoihow, Hankow, Liu Kung Tau, Ningpo, Shanghai and Swatow.)	
Jamaica	11 lbs.
(Including the Turks and Caicos Islands.)	
Japan	4 lbs. 6 oz.
China	11 lbs.

(Amoy, Changsha, Chinkiang, Chefoo, Foochow, Hangchow, Hankow, Nanking, Peking, Shanghai, Shanghai, Shasi, Soochow, Sungchin Swatow, Taiye, Tientsin and Wuchang.)

Korea	4 lbs. 6 oz.
Leeward Islands	11 lbs.

(Antigua, with Barbuda and Redonda, St. Kitts, Nevis, with Anguilla, Dominica, Montserrat, and the Virgin Islands.)

Mexico	11 lbs.
New Zealand	11 lbs.
Nicaragua	11 lbs.
Peru	11 lbs.
Salvador	11 lbs.
Trinidad	11 lbs.
Uruguay	11 lbs.
Venezuela	11 lbs.
Windward Islands	11 lbs.

Merchandise packages to every one of the countries may be two feet in length, but to some of the countries may be three feet six inches. Local Postmasters can give the information. It will be observed these provisions admit of sending not only Seed, but plants like Blackberries, Grapes, Raspberries, and even fruit trees of small size.

International Money Orders can be obtained at the Post Offices of all the above countries, and every order for Seeds must be accompanied by a Postal Order made out at the prices in this Catalogue.

WE SOLICIT CORRESPONDENCE IN FRENCH, GERMAN, SPANISH, ITALIAN,
OR IN FACT, ANY LANGUAGE,

PLANTERS AND GARDENERS PRICE LIST.

WE DO NOT CHARGE FOR BAGS OR BOXES.

We Mail Seeds Postage Paid.

Seeds in packets, ounces and quarter pounds are mailed by us free of Postage. Half-pounds, pints and quarts, the postage must be added to price quoted at the rate of nine cents per pound and fifteen cents per quart.

OUR SYSTEM OF CONDUCTING BUSINESS is to give satisfaction to our customers, which we always guarantee.

See page 4 for full explanation as to Seeds by mail in papers, packages, etc. In larger quantities we make our prices 10c. per pound cheaper than our competitors, instead of advertising our seeds postpaid.

SPECIAL NOTICE.—Those only who can show a letter of recent date with our signature attached, are authorized to solicit orders for us. We wish to call special attention to this, as we know it has heretofore been the practice of unprincipled persons to procure the catalogues of prominent seedsmen and take orders in their names which they will fill with poor stock bought elsewhere. If our patrons will kindly notify us of any person whom they have reason to believe is not a regularly appointed agent, we shall consider it a favor.

OUR TERMS.—Cash or satisfactory reference. Orders from unknown parties whose financial rating is not recorded, must be accompanied by a Draft on New Orleans, Registered Letter or Money Order. Where neither of the above can be obtained, send remittance in United States postage stamps. Stamps must be in good order, and placed so they will not stick together.

No Plants or Live Stock sent C. O. D by Express.

When ordering write your name plainly, give correct P. O. address if by mail, if by express give your express office or nearest express, to avoid any delay; also if by rail or boat give station or landing, and if possible the name of railroad or name of boat.

All C. O. D. orders must be accompanied by at least half the amount.

BEWARE OF CHEAP SEEDS.

NO ONE CAN FURNISH A GOOD ARTICLE BELOW COST.

Special notice is given to purchasers to compare our catalogue prices with those of Northern firms who add freight, cartage and cost of bags. Taking those items into consideration it will be seen that our prices are in keeping with those whose prices are far in advance of ours and our seeds are none but the best the soil produces.

These prices are calculated very low, be careful of lower offers.

TESTIMONIALS FOR 1911

Louisiana, October 27, 1910
Am just back home and find my cockerel O. K. Many thanks. He is all right. In my trip I saw several country fairs in North Louisiana and South Arkansas, and many chickens, but did not see any Barred Plymouth Rock Cockerel that I would trade mine for.
F. ORTEGO.

Mississippi, September 10, 1910
The seeds that I got from you last year were magnificent and bloomed in the snow in the open ground all winter.
MISS JOSIE B. DOHERTY.

Louisiana, September 8, 1910
The 80 assorted fruit trees that you shipped to Elridge last winter were a perfect success, every one growing splendidly.
A. PLASSAN.

Louisiana, August 20, 1910
All seeds I've purchased of you give such perfect satisfaction that I wish to buy from you again. I know that what I get from you I can depend on having a good stand.
J. B. COLLEY.

Mississippi, May 1, 1910
We are well pleased with your seeds and trees. We are especially gratified at the kind of fig trees you sent. They are indeed fine ones and have not lost a single one. We have implicit confidence in your house and depend on your advice.
J. L. BRADY.

Louisiana, May 10, 1910
I always like to let people from whom I buy know when their goods give satisfaction. I have used Steckler's Chicken Cholera Cure on my chickens for a week, and I find it one of the grandest and best things that I have ever seen. I put it in the water and it has cured them all, over 100, and I never expect to be without it.
MRS. KATE MITCHELL.

Louisiana, May 21, 1910
Some time ago I ordered a setting of White Leghorn Eggs from you and write to let you know I have had good luck; hence ten—three roosters and seven pullets—out of the thirteen eggs.
MRS. CLARA P. ALFORD.

Minnesota, May 19, 1910
Your Seed Catalogue reached me to-day, and it is a "Hummer." I am much pleased with it and thank you very much for sending it. If your seeds are as good as your catalogue—and I have no doubt but they are—you are certainly doing a great work in the Southern States.
JACOB W. BB.

Louisiana, April 24, 1910.
The box of palms came safely yesterday, and I want you to know how delighted we are with them. Indeed they are much larger than we ever expected to get for that price.
MRS. J. M. LEE.

Louisiana, June 14, 1910
I want to thank you for the quality of the flowers sent to me. They were far superior to any I have ever received from any other New Orleans florist, and I have tried several. The flowers arrived in perfect condition, and in good season for the wedding. They kept fresh all evening and were still fresh all day Sunday. I took great pleasure in telling my friends where I obtained them.
MISS M. G. McDONALD.

Louisiana, May 26, 1910
I bought some rose bushes and other flowers from you in the early spring, and it gives me pleasure to tell you that they have grown splendidly and given much satisfaction.
MRS. G. A. ROUSSEL.

Georgia, July 4, 1910
Ship us another package of your Steckler's Death to Lice at once, as we cannot raise chickens without it.
J. D. MOULTON.

Louisiana, July 10, 1910
Received the turnip seeds in this morning's mail. Must say that I am surprised and thank you for such prompt attention to order. Send me a catalogue.
O. J. O'QUIN.

Louisiana, July 17, 1910
We have raised from your seeds some fine beets, measuring 22, 23 and 28 inches; also some squash measuring 32 inches around, and cucumbers 17 inches long. They are all fine. Send us the following seeds.
OZEA L. JUDICE.

Louisiana, July 19, 1910
The seeds I bought of you, "All Season" Cabbage, this spring, were fine. Out of one 5c. paper we raised 275 head, some weighing 6 pounds; and your Kentucky Wonder could not be surpassed. I shall never plant any other bean, as they keep tender so long. I have been dealing with you so many years and find your seeds the best.
MRS. JAS. J. GRAGORY.

Louisiana, April 17, 1910
Send me another package of Mite Destroyer. It is the greatest thing for mites that I have ever seen, and entirely successful.
MRS. A. W. RIGGS.

Mississippi, April 4, 1910
The last lot of Mexican June Corn came up unusually well; over 90 per cent germinated without a rain.
C. B. ALLEN.

We could fill this entire Catalogue with Testimonials from our many Friends
